I am interested if there are any State Police or Highway Patrol Agencies that use UHF 450-470 Mhz as the main radio communications. This would not include mobile repeaters to extend VHF Hi-Band or Low-Band communications. I am talking about UHF 450-470 Mhz high power mobiles and repeaters being used as the main radio system. Can anyone help?

Henry

1923. Re: Discone Antennae

Newsgroup: rec.radio.scanner
Date: 1998-04-18 00:00:00 UTC
From: llevy2@pacbell.net
Message-ID: <3538e2de.934756@news.pacbell.net>
Source record: 163186

Hi, John:

Those damn CC&Rs! and antennnas, we have the same problem here.

I mounted a Diamond discone in my attic using about 25' of Radio Shack Rg-8 cable and it works great! I've had this set up now for 10 years.

Here's a couple of things to consider however:

First off, the main drawback for the less expensive RS discone versus the Diamond seems to be the durability of the antenna elements. But, since this antenna is not going to be exposed to weather, if it were me, I think I would save the extra money and go with the RS model. I think I would put the extra money into a better grade of cable. This is especially critical with 800 MHz signals as they tend to get attenuated very easily by cable loss.

Second, in regards to the guy who suggested a yagi. There are some serious holes in his argument. One, as he stated a yagi is directional. Yes, you can mount it on a rotor, but if you live in a place like me, signals come in all the time from all different directions. Also, yagi's ain't cheap and neither are rotors. By the time you get one, even if you could find one or make one cut for 800 Mhz, buy a rotor and cable, you are going to be over the amount you had intended to spend.

Third, you might even consider this, if ALL you are interested in is 800 Mhz stuff, coming off repeaters. namely, stick with a telescoping antenna attached to the back of the scanner. Many people find this works great, when the antenna's length is adjusted for optimum performance in the 800 Mhz band. No problems with cable loss here :)

Fourth, and most importantly, if you live in a wood frame home with either a wood shingle or stone roof, you will not notice a geat deal of difference between an antenna mounted in the attic and mount set up on the outside of the roof. However, many homes in parts of the U.S. have aluminium siding or other metal materials and that will adversely affect how an attic mounted antenna will work.

Any further questions, please feel free to ask.

Good luck,

-Larry

From: radioactive <jjga52NS@hotmail.com>
Message-ID: <6haugfcoa1@news6.ispnews.com>
Source record: 163190
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

I have two 9000XLTs for sale, with everything that came with them, including the box, user manual, and still untouched antenna and Uniden AC adaptor in original packaging.

One has a slight, almost imperceptible, hairline 1&#65533;" scratch on top --nothing else-- from the top shelf where it was placed for a few weeks. This one, on the other hand, has been used even less than the other, probably 20-25 hours only total. I would like to get $275 for it, shipping included.

I would sell the other one for $280, total. This one adds an absolutely still unopened user manual too.

A never-used frequency list that came in the boxes will also be included in the package. No, they haven't been modified in any way: they are as they came from the factory.

Please only serious inquiries only.

You can go see a picture and some of the specs directly at:

http://www.uniden.com/docs/product/prdetail.asp?prodcode=BC9000XLT&prodcat=7

1928. Re: Eavesdropper guilty of phone pranks

Newsgroup: rec.radio.scanner
Date: 1998-04-18 00:00:00 UTC
From: "David M. Hitchner" <NoOne@NoWhere.net>
Message-ID: <6havha$7ae@bgtnsc02.worldnet.att.net>
Source record: 163191
Cross-posted to: alt.radio.scanner,rec.radio.scanner

It seems to me that if someone had a DTMF decoder and a scanner it would be very easy to find the codes to access the phone company provided mail boxes or to catch someones codes whose calling in to their home answering machine. I hardly believe that Bell Atlantic could not figure out how it's done. It's probably that they just don't want to admit it in the hopes that someone else won't try it. Just like the cell companies not wanting there customers to know how open their systems are.

Anyway I hope they burn this guy (using existing laws). It's people like this that give our hobby a bad name and send our elected officials into panic mode. This type of thing could create more anti-scanning laws making criminals out of all of us.

Hi David,

That's exactly what I thought when I first read the article in
the Washington Post. I'm pretty sure that the folks at Bell
Atlantic are very aware of how this guy broke into his neighboors
voice mail boxes.

From what I read in the article that appeared in the Washington
Post, this guys been in Jail since last August!

>something, and I though pagers were supposed to be like 9600. Is there a better
>program for me?

Was that signal POCSAG or something else (like possibly Golay or
FLEX?)

The maximum baud rate for POCSAG pagers is 2400 baud (they come in
512, 1200 and 2400 baud). Also, 2400 baud POCSAG can be VERY tricky to
decode, especially if you are in an overlap area (timing margins get
really tight with multiple transmitters).

For faster data rates, FLEX pagers go up to 6400 baud (and the
technology is designed to be "scalable" much higher, but that will
require much wider channel spacing than the 929 or 931 MHz band is set
up for).

>> Been looking at Grove's inside hidden No-Tenna and their Windshield Mount
>> Scanner Antenna which looks like a cell phone antenna.
>>

I haven't tried a glass mount antenna, but I did waste about twenty bucks on Grove's No-Tenna. In my personal experience, the No-Tenna was only marginally better than no antenna at all. In fact, I did some tests, and decided that a Radio Shack standard issue rubber duck antenna (like the on on my Pro-43) was MUCH better even inside my car.

I learned a lesson that cost me $20. However, your mileage may vary.

I just got 2 Bendix King military handheld 14 ch VHF radios, but it does not have a model number on it. If the radio you have is a government radio it may be programable from the keypad. If it is not you will have to jump two of the connections on the side of the radio where it would hook up to a computer. I have found a place that sells everthing you should need. Let me know if you're interested and I send there homepage to you and I will try to help you program it.

Source record: 163229
Body handling: HTML body converted to readable text

,An S-meter is very handy when setting the levels for your squelch.

The Pro-2042 is pretty classy on its own though ,but like any capable
receiver/scanner,signal-quality is important.Get a good outdoor antenna.
Elevate as high as possible.Get a good cable (like the RG213).

If you start adding upgrades; like hardware and software to support it ,
you will find the Pro-2042 gets only better and better. With a full hand
of upgrades and enhancements ,it is still very cheap compared to many
"all-in-one" receivers costing perhaps two- or three times as much.

I think the Pro-2042 has a great potential for the right kind of user. If
you are really into the hobby, the Pro-2042 is a an effective way to start
building your own special scanner setup...

Source record: 163231

Hello all,
I was wondering if there are any add-on boards to allow for the digital reception in the 800 MHz band. My local PD (Yonkers New York) jumped up to the 800 area.
I have a friend who says hes got a board but he needs some sort of code (guess like a PL number), don't know I have been out of the scene for about 5 years and dusted off the equipment and well I want it all.
If this can not be modified are there any good "base" (non-handheld) units that will do the job I need done?

Thanks for your time.
Please e-mail me I don't get on very often.

John:
Forget about the attic discone if you want to nail distant 800-900 mHz signals.
You will be very disappointed, unless your located high on a hilltop within good direct line of sight of the stations you want to hear. (I am not so blessed.)
Go for a dedicated yagi antenna. It can be mounted in a fixed direction or used with a rotor. It doesn't have to be expensive. I use a $15 Radio Shack UHF TV antenna
(#15-2160) mounted vertically. A broadband cable TV amplifier in-line will often help with those weak signals.
If possible, dedicate one radio for 800-900 mHz monitoring. If not, use a coax switch and a separate antennna for the VHF band.
One word of caution, don't skimp on coax. Good quality RG-6 should be considered a minimum for UHF monitoring.
Good luck.

True, but on board services uses different frequencies from the road
frequency. You might try 160.440, 160.455 and a60.410 these are listed
in my Altamont Press timetable as on board service frequencies
There are some lists of frequencies available on the web but I don't
have the URLs.

You should be hearing something on your scanner if you have the host
road's frequency punche in. The detectors are on the same frequency
and you should hear them. In my area (Norwalk, CA) you hear Amtrak
more than freights since they generally call out the signal aspects.

Pieter,

Call Fair Radio Sales in Lima Ohio, they had a rack mount power supply (48 - 50 VDC) originally built for a commercial HF amplifier that should fit the bill nicely. I was looking at this supply for the same type of solid state amplifier project that you are building.

Hello. I'm interested in getting a used Uniden BC200XLT handheld scanner. I would like to trade my Radio Shack PRO-2026 Base/Mobile Scanner for it. My scanner is in good cosmetic condition and perfect working condition. If you have a BC200XLT scanner please e-mail if your interested in trading it for my 2026. Here are all of the features of the 2026:

-100 Programmable Channels (5 bands, 20/bank)
-Volume, Squelch, Built In Speaker
-Scan, Search, Lock Out, Manual Feature, Monitor
-1 Touch Police, Air, Fire, Marine, and WX Bands
-Mobile Mounting Bracket, Home Stand
-Power Cord, Owners Manual, Original Box
-RX: 29-174, 406-512, 806-956 (Minus Cellular)

POC32 may look nice, but still can't do a lot of things. Try logging
certain pagers to a file. Try getting it to start a new pager file at
midnight. It also ties up a perfectly good Win95 machine when PD runs
fine on an old 286.

I agree POC32 is a nice program, however PD is a lot simpler..

This is typical Cheek. He defends one lie with another lie. I've posted several on-topic or partially on-topic posts here in just the last couple of months. Anyone interested can check for themselves. In fact, I suspect that my ratio of on-topic to off-topic posts is better than Mr. Cheek's, plus I don't indulge in the gutter language and insults that he uses.

Cheek's final sentence above looks like a self-description, to me.

You are so wrong, while version2 of poc32 is much improved and a great
program, it is no pd-204. I don't know what the problem is, but
poc32V2 still truncates alpha message and misses allot of stuff saying
100% success rate.
Have you noticed under OPTIONS>>POCSAG>FLEX!!!! Does this feature get
unlocked with a registration or is it just planned, either way I'll be
sending the guy the money for this great program.

Just got back from the pawnshop with a MINT pro43 for $40!!!
Not RRS or ARS sellers mint, true use of the word!
The thing was next to a pro2036 for $199, I picked it up and it worked so I took it, the price on it said $50, but I guess since it had been sitting there for a while the guy said cash, I'll give it to you for $40.haha, anyway I have all the mods for it, but seem to remember that some couldn't be modified for full 800 coverage, and none of the files I have mention it. The Fcc id is AA020-300 and S/N is 068753. I would hate to break my awesome new toy!

What an awesome scanner, I just returned my new pro-64 because of it, good thing for R/S 30 day return policy. Too bad, It was a ok scanner, that 3 wire computer programming hookup was first class, too bad it lacks in coverage. I hope the handheld uniden trunktracker is a worthy replacement for it, I'll let you know.

The only bad thing about the '43 is that it gets pager images in the
160-162 Mhz range(if you like to listen to rail/transit comms, this can be
a hassle).
Other than that, it's a nice little box indeed!

Yeah, that's a real good reason to screw over Radio Shack, who now have to sell
a used scanner at a loss. Real nice, guy. You get a decent bit of luck and it
inspires you to screw the salesman out of his comission - because he sold you
what you wanted and you were happy with it.
No wonder the prices there are high, when the fact that they have a
decent return policy is abused this way because you found a good deal at a
pawnshop. You probably wasted an hour of his time selling you the radio. I bet
you "rent" your vacation radar detector there too. Oh but he's just a salesman
at Radio Shack, who cares whether his kids eat......
Watch it if you know this guy. If he wins the lottery there's no telling
what he might do to you.
I'm glad you got lucky, but you sure could have found a better way to
celebrate.

Hi Bill,

They're allocated to the following frequencies:

Base Station Plane Channel

454.675 459.675 Calling
454.700 459.700 6
454.725 459.725 7
454.750 459.750 5
454.775 459.775 8
454.800 459.800 4
454.825 459.825 9
454.850 459.850 3
454.875 459.875 10
454.900 459.900 2
454.925 459.925 11
454.950 459.950 1
454.975 459.975 12

Hope this helps

Bob

If your scanner has a tone board and is at least a 50-100 channel
scanner, just enter in the frequency multiple times with a different pl tone
each time, there are only so many pl tones, hit scan and when the scanner
stops on a transmission .... bingo!!!

Depending on your scanner, you may not be able to enter that fifth digit of the frequency. That's OK and don't worry about it. If the trunked system in your area is a motorola system then yes the trunk tracker would be the best choice.

Depending on what you want to listen to....if it's emergency services I
would recomend the 3000XLT. It would be wise though to check out the trunk
trackers, they are better and they trunk track !!!

Make sure the scanner has 800 mhz coverage or even better is trunk tracker.
If the services in your area go 800 mhz you will bw very unhappy if you don't
have the coverge. Maybe a good used scanner would be in order as sooner or
later just about every emergency service in North America will go 800.

The way to reset some Bearcat scanners is a follows:1) turn radio off
2)press and hold MANUAL, 2, 9, keys
3)turn radio on while holding above keys down and wait for 0000.000

In my business I use 2 trunk trackers, at 235 and 895. If find that they are superior quality scanners for use in a high intermod-interference area. I could go on and on saying good things about them. I have a 2500 as well and have suffered with it, my opinion is that the 2500 is the worst radio for interference ever made!.

As far a volume on the 235, it's a bit low, but an amplified speaker from Radio shack solves that problem.

I have only 2 compaints about the trunk trackers, 1) they don't track GE-Erricson-EDAS and
2) I only have two of them !!!

Bill Bergadano <bdano@cybercomm.net> wrote:
> ... There is a frequency assinment near 450MHz for in flight cell phones.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850
10 454.875 459.875
2 454.900 459.900
11 454.925 459.925
1 454.950 459.950
12 454.975 459.975

Transmissions are FM. Ground stations repeat the airborne
half of the conversation, and transmit a continuous tone when
idle. From one to four channels are assigned in a particular
area.
Service is used on private aircraft.

Mac wrote:
>
> What are the exact frequencies for Cell phones??

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital). |
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

I am going to take the plunge and install two hole-mounted scanner antennas on my S-10 Blazer. I would be grateful for any tips, experiences and tricks to make it easier! How to drill holes and with what, s
the holes when vehicle is eventually sold.

Thanks in advance!

Andrew

I have 8 GE MASTR Executive II Base Stations for sale. The combination number is: F156LFS56A they are currently on 140.xxx Mhz The dial shows 8 channel positions. However, only 4 are accessable. I'm not sure what the power output is but I was told it was 110 watts.
Units are in good condition. Photo E-Mailed on request. price is $ 50.00 each or best offer.
Thanks
Richard

Cross-posted to: rec.radio.scanner,alt.radio.scanner

If you're interested in a free FLEX paging decoder setup check out:

www.geocities.com/CapeCanaveral/Launchpad/4039

The setup will work with a simple Hamcomm type interface connected to your scanner's discriminator output to send data to the supplied decoding program over your PC's serial port.

It may be cheesey, but it's absolutely FREE.

Thanks

Hello everyone,

For those that (like me) experienced difficulty in finding information
on the Icom IC-R10 receiver I've started writing a few web pages on
this subject. You may expect links, hints & tips and some reference
information. However, these pages are far from complete right now.
Please keep me informed on any site or page(s) that is/are not listed
or anything else you might know about the IC-R10 and want to share
this with others.

Thanks in advance,

Hi ya Smacksie, you old faggoty maggot, you!
How's it happening, Bub? You get over Sprint
kicking your arse off? Found yourself MCI, eh?

Guess what? MCI gives the old Size #13EE just
like me and Sprint did. So you need to be more
respectful and decent if you plan to stay there.

Anyways, I was wondering when you'd be back.
And even more wondering if you'd play like
nothing ever happened. And you did. I won
a $10 bet off the boys in the lab here. They
thought you'd be back on with a lame excuse for
switching ISP's and I said, NO, you'd play like
nothing ever happened. Heh heh heh. I won.

Heh heh heh heh....but you DID get a Size #13EE
crosswise on your sorry poopy AGAIN, that's fer
pea-pickin, duck-pluckin sure! And I bet it just
galds your arse something fierce, huh?

<giggle>

Okay, you're going back on my Shit List now
that I know you're back, safe and sound. You
definitely do make a good laughingstock mascot
for this newsgroup. I hated to see you go. 'Sniff.

So jump in, Smacksie! Bend over and spread 'em
again so's someone else can have a go at you.
There certainly is enough of YOU to go around.

<horselaughing and cavorting in glee and joy!>

2030. Freeware Spectrum Analyzer Update

Newsgroup: rec.radio.scanner
Date: 1998-04-19 00:00:00 UTC
From: Richard Horne <rshorne@mnsinc.com>
Message-ID: <353A686D.128C@mnsinc.com>
Source record: 163033

Spectrogram version 4.2 is a freeware dual channel audio spectrum analyzer for Windows 95 which can provide either a scrolling time-frequency display or a spectrum analyzer scope display in real time for any sound source connected to your sound card. Spectrogram allows unlimited recording and playback of sounds from the audio spectrum display and can provide very high resolution spectrum analysis of wave files with a wide choice of frequency bands and frequency resolution and either linear or logarithmic frequency scales. Spectrum data logging capability is also provided. Version 4.2 replaces 4.1.2 and adds useful new features including spectrum averaging for noise reduction and more flexible scanning and recording capabilities. Spectrogram is ideal for any purpose related to sound spectrum analysis including

Analysis and identification of biological sounds
Analysis and identification of human speech
Analysis of musical performances
Tuning of musical instruments
Evaluation and calibration of home audio systems
Ham Radio audio reception and tuning

Spectrogram 4.2 includes many features comparable to those of expensive commercial programs. If you need to be convinced, compare Spectrogram 4.2 to commercial audio programs described at the following locations.

http://home.t-online.de/home/raimund.specht/avisoft_.htm
http://www.telebyte.com/pioneer/index.html

Ha ha ha ha ha ha ha..... Pssst, hey Smacksie,
there are a thousand comedians in Hollywood starving
to death....and here you are being funny.

> As a token of good faith, I stopped all posts for several days

Noooooooo Smacksie. Sprint KICKED your arse off
their facilities and threatened you with legal
action if you went back. You were FORCED to stop
for several days.

> except for an occasional response to scanner type questions.

Poppycock. Rubbish. You lie like a rug, Smacksie.

> I guess now we see who is really responsible for the trouble here.

Yes, We do. You.

Try giving it a solid week with nothing but ON-TOPIC
posts, Smacks. See if you can do it. It should be a
month, but let's shoot for a week, Dink! You have to
account for propagation delay....so let it rest for
a week, and just talk scanners and scanning and see
what happens.

You ain't got a hair in your arse if you don't.....

You took a day to lick your wounds from the whooping Sprint gave you,
and try and figure out your new ISP MCI, and how to forward your
usa.net mail to it.
You did not let anything die.
Letting something die would have meant not replying to the 20 or so
posts you did today.
Show us what a man you are Mackey....stop responding. You know as
well as we do that if the drivvel stopped on your end, we'd all go
back to scanner topics.

2044. PRO-91 Channel Indicator

Newsgroup: rec.radio.scanner
Date: 1998-04-19 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6hdpk0$k5f$1@news4.wt.net>
Source record: 163047

I got a RadioShack Pro-91 Trunking scanner yesterday. I programmed in all of the frequencies for the county's 800 MHz trunked radio system. It works well and I noticed that the channel indicator is used even when the radio is in the trunk mode. It flashes a number when it is searching for a transmission. When a transmission is received the number changes and stops flashing.

The owner's manual does not explain this at all so here is my theory as to what the indicator is for. Please let me know if I am right or wrong.

On my radio the indicator flashes 21 when communications are idle. I thought that maybe this was the number of frequencies that I had programmed into the trunk bank. So I counted the frequencies and there were 26. I thought about it and counted just the frequencies that did not have a constant stream of data. There were 21. I figure this means that the indicator shows the number of frequencies on the system that are available for voice communications.

The number that shows steady when a transmission is received is usually a 7 and sometimes a 2. Since the trunked systems store fleets in 8 blocks of equal size I think that this number is representative of what block the group uses.

If I am right this is a great feature in that it would make it easier to custom program fleetmaps into the radio.

Any feedback is appreciated.

From: dan441@mailexcite.com
Message-ID: <353A93A8.1C35AFCA@mailexcite.com>
Source record: 163049

Here is an observation for you John.
You want other people to stop posting messages about you, yet you come back on here and reply to the postings and keep things going.

It appears you don't want to be out of the spotlight and as usual you are keeping the threads going.
Why not just ignore the postings and go on with your life instead of replying to them.

Also where is the information on the warrant you boasted about having on Bill, were all waiting to see the information you got from the San Diego Courts.

You must not have found anything damaging to Bill, otherwise you would have posted it on every newsgroup there is on the net.

Have a nice day John, you may as well enjoy them while you can as your days on the internet are numbered.
After all the way your going you will be banned from every ISP in the country.

Think about it, you are still doing the things that caused you to be kicked off the other ISP's, also Sprint did kick you off but as soon as they did you would setup another account with them and give false info so their system could not block you.

Just to show everyone is wrong you are going to get another sprint account that you will access with false information or have someone else get it for you.

That is my observation and it is dead on.

2047. Frequencies for Yosemite National Park?

Looking for an inexpensive 2M handheld such as an old IC-2A or 2AT or
Tempo S1. Don't need anything fancy. Physical condition not important
as long as it works ok. Does NOT need to have a PL since it will be
used mainly for simplex operation. Please state what you have and your
asking price please when emailing. Thanks.

It really boils down to if someone wanted to, and they have deep pockets...
The police up here use the VR-2 radar detector/detector, as usage of radar
detectors is illegal (under the Highway Traffic Act) so they can locate
these illegal units. So if scanners were ever made illegal.......
Draw your own conclusions!

Cry,cry,cry what are you, one of the sales drones? The thing was in
mint condition, with every single piece of plastic in place, I didn't
eat the silica gel or anything. I doubt the bastards at RS will give
anyone a deal on that thing, I'm sure its right back in stock for
someone else to buy, as a matter of fact they are now selling them for
$179. I got that one for $149 with a coupon from a sales flier found
in the store. RS will now be up an additional $30.
It was an ok scanner, not particularly sensitive, and the frequency
coverage sucked, I had been thinking about taking it back anyway
since all of the PD's around here are trunked, and it got tons of
images, It didn't even seem like a triple conversion unit.

> No wonder the prices there are high, when the fact that they have a
>decent return policy is abused this way because you found a good deal at a
>pawnshop. You probably wasted an hour of his time selling you the radio. I bet
>you "rent" your vacation radar detector there too. Oh but he's just a salesman
>at Radio Shack, who cares whether his kids eat......

BWAHAHAHAH, the moron I bought it from didn't know his ass from a hole
in the ground. I walked up and said give me that, took him ten minutes
too figure how to enter the instructions for the discount coupon
(Which were spelled out quite clearly). It took his manager to come
over and teach this bozo how to accept my credit card. It was a joke,
but quite typical at radio-shack.

Why are RS prices so high anyway? Why does my 1998 radioshack answers
catalog list the NEWpro-64 for $299.99 when two weeks ago you could
get it $149? Wow, 50% off are the guys at tandy being our friends for
once...haha I doubt it. From what I understand it already being
discontinued. Who ever makes the decisions at the top of RS are too
blame for the problems and the prices.
Don't forget about the $125 programming package for it....A $5
cable..hmmmm you do the math on that one..

> Watch it if you know this guy. If he wins the lottery there's no telling

Wow, I never intended this thread to go in this direction, that's for
sure!!

You are ranting and raving like a lunatic. You must get alot of
returns at whatever pathetic sales job you have to be so angry like
this. It's radioshacks policy 30 day return policy,whats the big deal,
get a clue here man!!! Most, if not all stores have a 15 to 30 day
return policy. If the thing is in like new condition, what is the
deal? If tandy thought people were abusing their system, don't you
think it would change?
In light of your moronic rantings, tomorrow I'm going to evaluate a
PRO-90 and a PRO-2042 for 29 days just like shareware. I'll be sure to
delete them just before the 29 days are up. The sales drone will
probably win anyway, since he will get paid and in 29 days I'm sure he
will have moved on to a new job anyway.

bcr@mindspring.com writes:
> Can anyone help with frequences for greenwood lake
> ny...ie,police,fire,ambulance or GMRS RADIO

Years ago that whole part of northern NJ (yes, I know you said New York) were on 37.30 and 37.42. That was true from Pompton Lakes through West Milford, at least. I don't know if the Greenwood Lake NY folks shared those frequencies or not, though. Back when I was living in Ringwood, the Greenwood Lake NY PD was pretty much a phone booth in a parking lot at the north end of the lake, though 8-)

Current scanner guides I've looked in (out of curiousity, since I live in Jersey City now) still listed the 37.30 for those communities, but *not* 37.42. Of course, in the 70's 37.42 was the "secret" frequency that was used because they knew people listened to 37.30, and the current scanner books are oh so politically correct and say they don't list "sensitive" frequencies, so maybe 37.42 is still used.

>Date: Sat, Apr 18, 1998 23:13 EDT

This isn't the direction I was expecting either, Jack. I'm not really anxious to have this become a Quixotic Mackey/Cheek feud either.
I'll make one last run at this: An immediate response to a slight bit of criticism over the ethics of what you did was to call ALL Radio Shack employees less than human, which to be fair was Tyler I think. You attacked a group of 35,000 or more people you don't know in your last response. You couldn't get two sentences out before you called me names too. I kept my comments focused on what you said you did, and on what Tyler said in his posts. I think you may be reacting to a lot of what was aimed at Tyler after he initaited the personal attacks.Both you and he attacked me and Radio Shack employees on a personal basis. There must be some guilt there for you to respond so forcefully that Radio Shack and the salesman "deserved" what they got. It's ok to do something to a "sales droid or sales drone" that you might be embarassed to do to your next door neighbor. That's what name calling is used for, to depresonalize someone you don't want to treat as well as you'd like to be treated. I didn't think you knew that RS docks the salesman's comission when something is returned, regardless of how long it is out- but your attitude from the first post was that it didn't matter because he's just a Radio Shack employee.
This has escalated because you continue to attack on a personal basis instead of sticking to facts and ideas. Why do you have to guess I have a "pathetic sales job" - you want to make me angry and demean me personally. You obviously must consider all sales jobs pathetic, and anyone who shows sympathy for someone in such a job must also have one.This sounds remarkably close to the old Caste system in India.
Did I make guesses about your career and demean it? You say essentially I have to be a moron or a lunatic to have a different opinion than yours. That is the action that a bigot would take in attacking anyone who disagrees. You see, I don't have to call you a name to make a point.
I don't work for Radio Shack, I don't own a share of stock, I'm not related to anyone who does. You strike out at ME by making a promise to go and lie to a Radio Shack salesman & pretend you want to buy 2 scanners - use them for 29 days - and then return them & demand all your money back. This is premeditated retail fraud, but more to the point it just isn't a very nice thing to do. That's kinda where this started before Tyler got all bent out of shape & started the name calling. Which is what got me mad and then that got you mad and....
Why did you threaten to do this particular action? Well, you seem to think

it will shut me up. You seem to hope it will injure ME somehow if you do this. How sane is that? How intelligent is that? You don't like what I said so you'll go take it out on Radio Shack and whatever fellow behind the counter you decide might look like a Neutrodyne. A novel concept, but not terribly logical.
So fine, I'm nuts, that makes you mad and you are determined to make Radio Shack pay for it. If that's way you gotta be, Jack I'm just REAL glad I'm here and you're there.
So hey, we disagree & that's that, OK?
Neutrodyne

Doesn't sound like the speaker. Sounds like (I'm no electrical engineer) something is wrong inside. It still receives strong, but doesn't make it through the wires correctly. Maybe (I'm no electrical engineer) the crystal is bad. It seems maybe there is too much resistance when it tries to tune higher freqs by cause of faulty hardware component?

Really? How's come?

> No matter HOW fast the machine is, it's better to build up a 486-50 or
> better and run the "radiocard" all by it's lonesome.

Wellllllll, ain't nuthing wrong with that. But it
could be a trifle "overkill", for for the wrong reason.

> No matter how good , you will find that ALL Windows machines crash in
> direct proportion to how many "extras".. you add.
> Run ONE App.. for the radio, and it shold be stable!

Oooooohhhhhhh, that's one of them "wrong" reasons.
Who on earth told you that steaming piece of FUD?
That's utterly silly, and clearly comes out of
someplace where they just don't know Windows from
Dominoes.

> A little bit of looking will get you a complete mid-to-hi end 486 for less
> than $150 with monitor!

That's maybe within the realm of possibility, but very unlikely.
The monitor alone, if worth a hoot, is worth at least half
that. And then the hard disk and RAM easily make up the
other half. No one in full possession of their faculties
would sell their 486 system for under $300-$500, depending.

Like you said, it's good for radio, if nothing else, but
frankly, a 486DX2/66 and up is still good for lots more
stuff. Hell, I still use a 486DX4/100 as a file server.

And I use a Pentium 90 as a Back Office/NT server, with a
combination of Pentiums, AMD's, and 486's all running
Windows 95, Windows 98, and Windows NT. All these
machines run a host of applications, including radio,
with rarely, if ever a crash. Some haven't logged a
crash in months.

You send me that feller who dropped that steaming pile
on you. He needs a good working over. He's probably
one of those goofy OS/2 zealots still holding out.....

I'll fix 'im. Send 'im to me. :-)

Why would police bother with spending time trying to pick houses to target
just to see if someone is using a scanner? The only reason I would think is
if a person was a suspect in a crime or a drug investigation, then they
might want to target that person to see if they had a scanner to follow
police activity. They just don't have the time to monitor every Joe on the
block nor the desire. Just listen to your scanners if you live in any good
size city, they are BUSY OUT THERE. They don't have time and most of them
could care less if you have a scanner unless you are using it for illegal
activity and even then it would be hard for them to find out unless you were
already a suspect in a crime. Many of you I believe I this is sincere and
not to degrade anyone, but many of you seem to be too paranoid.....RELAX,
and enjoy your scanning.

As far as I know,, you will not be able to hear this with any scanner
currently in production...But, then again, the MSP aren't exactly
having stellar results with this system either.
Amazing how the "brains" of their communications group overlooked the
fact that VHF-lo traveled much farther than 800mhz.
I imagine once they fill in the holes, it shall do a little better
though.

I have for sale my Radio Shack PRO-2042. Used only a few times, its only about 3 months old. Paid like $400 for unit. I now have a BC895XLT and have no need for the PRO-2042. Have box, receipts..everything that came with scanner. Asking $325, you ship.
I don't have to tell you its in excellent condition!

Thanks..

They ought to be paying folks to take them. The squelch tail on these things will drive you bananas. If you can find a Pro-64 (triple conversion, BTW, vs. messy double for the Pro-51) still on sale at RS ($169 last month), take it. It has no squelch tail whatsoever.

The audio isn't as good as the 51's, however. But it's worth it.

I would think it more appropriate to prosecute under the Stalking laws, which I think would apply here. This would be better than the ECPA laws. It was not the fact that he listened but what he did with the info that caused the grief. Casual listening where it goes in one ear and out the other, though now illegal, does not cause that kind of damage.

-Jin

In a trunked system, there is no "Magic" formula to determine the order of frequencies of a trunked system. The frequencies are assigned by the FCC based on local availability.

Just as cellular can be restored by removing the diode D-6, the step sizes in
the cellular band can be changed to 12.5 khz by adding a diode in D-7.
This information comes from an old Monitoring Times. I have never tried this
modification.

I am trying to decide between a MVT-7100 scanner and a UBC-3000XLT. The MVT-7100 has 1000 channels and continous 0.5-1600 Mhz coverage. However, it is supposed to be hard to program and has worse audio quality. I've read the comprehensive reviews at Rick Well's scanner site, but still can't decide which scanner to get. Can someone who has a MVT-7100 give me more information on the scanner's audio? How does it compare with other high end scanners, such as the Pro-26 and UBC-3000?

I have to correct my previous post. This morning I turned my scanner on and noticed that the blinking number was a 20 instead of 21. I counted the voice channels and sure enough the system had changed. However, the steady indicator shows numbers as high as 25 not 7 so I don't think this indicates blocks.

Can anyone help me find out what this indicator is for?

What software is your favorite for keeping track of all your channels? I don't mean channel programming software, but when you are listening to your scanner, and you want to find out what all the ruckus is on bank 3, channel 51? where do you look to see what you have programmed there? I've tried keeping it listed on paper, which is ridiculous because I'm always testing new frequency lists, I've tried making a table using Adobe tablemaker, but this thing has grown to 500K, and recently got corrupted somehow and is now worthless..so what's a good solution?

BTW, I have a Uniden Bearcat BC200XLT

CHP is currently using the following frequencies for aircraft
enforcement:

45.02 Simlex Air to Ground (Bay Area)
42.60 Simlex Air to Ground (Bay Area)
122.85 AM Air to Air (State Wide)

They also use the Blue Channel (42.34 - 42.18) to coordinate with
ground units on the Base Frequency 42.34.

Hope this helps

I have a BRAND NEW Optoelectronics R11. It includes everything that you would get if you bought it directly from the factory (which I did), plus the carrying case and stubby antenna.

The unit sells for $299 (plus accessories), but you can have this one for only $200, and I'll pay the shipping cost.
For more information, look at: http://www.optoelectronics.com/r1198.htm

Diet 9 News Release

Additional Details on Incident #51

Information as of 4/20/98 8:51:52 PM.

ADDITIONAL DETAILS

1144 -- CAD #249: PURSUIT OF BURGLARY SUSPECT
1144 -- FROM LOS ANGELES TO SAN DIUEGO-MEXICO BORDER
1144 -- PER LAPD, THEY TRIED TO STO SUSPECT, HE REFUSED TO YIELD
1145 -- PURSUIT WENT DOWN 405 TO 5 TO 805 TO 5
1145 -- STOPPED ABOUT 10 FEET NORTH OF THE MEXICAN BORDER
1145 -- SUSPECT EVENTUALLY DROPPED HIS INFANT PASSENGER
1146 -- THEN RAN INTO MEXICO ON FOOT
1146 -- HE WAS TAKEN INTO CUSTODY BY MEXICAN OFFICIALS
1146 -- CONTACT LAPD FOR MORE INFO ON REASON FOR THE STOP

Quote from the scene from an unidentified LAPD commander "The Federalis have CAR-15s, the CHP has AR-15s, the San Diego PD and US Customs have AR-15s, but thanks to our coke-snorting, needle exchanging and federal indicted LA City Council members, we still aint got no AR-15s!"

Diet 9 News, the one-calorie newscast, has announced its newest incarnation: Police Chase Channel International.

Due to the interest of our audience, Diet 9 News has formed a partnership with TV Azteca Tijuana to broadcast live all international car chases. When other stations stop at the border, Diet 9 News will fly over, allowing non-stop coverage.

As you already know, Diet 9 Team Coverage means that we will pull off of Pacific Coast Highway mudslide stories, live remotes from the Federal Roybal building, or the latest Ginbsberg News Conference. We will cover the chase, "From Dispatch to
Impound, to all of Southern and Baja California...."

Diet 9 viewers will be allowed priority service to call LAPD Dispatch, claiming they saw the suspect with a gun, to give officers advice (shoot the tires out) in which dispatchers will dutifully relay information to overhead air units.

Diet 9 anchors, such as P Harvey and J-V Mitchell, will proclaim intimate knowledge of police chase procedures, and will correctly, misidentify all agency logos and

frustrate all scanner enthusiasts (who can tell an agency from the numbers on top a police vehicle, as well as the number of antennas)

The Diet 9 Newschat will also allow viewers to send emails directly to pursuing officers MDT's, and created live chat sessions with incident supervisors. Diet 9 anchors are also pursuing a Live Vote section, to answer real-time if officers should employ spike-strips, fishtailing or blocking traffic manuevers, active vs. passive pursuits, and allow team coverage participants to rate the chase on technical and artistic merit, compared to others covered that week.

NEW FEATURE

If our suspects do happen to make it into Mexico, we have secured an exclusive Diet 9 hotline to Las Federalis Policias, whereupon viewers can select which method they wish to stop the pursuit

.223, .308, or .50 cal

Diet 9 News is an equal opportunity, team-coverage, employer. You don't need any knowledge, just a good head shot.

The closed captioning of this news release was sponsored by The New Club, recommended by law enforcement the world over....

Hosfelt Electronics, latest catalog, page 11. Rare 14 volt grain of wheat bulbs are 35 centts apiece in quantity of one. Part no. 25-220. They will probably make better price in more quantity. Phone no. is 1-800-524-6464. You can get a free catalog (186pages), and their prices are very good. Their service is fast and accurate. In addition to the Rare 14v grain of wheats, they have a bazillion lamps and almost all general electronics parts as well as some surplus items. I dont think they have a web page yet, but I have bought from them for over 10 years with no dissapointments.

I had one and really liked it. I took it out to the mall and heard all sorts of stuff. I started out with that stubby antenna and the range was about 10 feet on a motorola handheld that the maintnence person was using. I switched antennas and got much better results. It was like having a bionic ear. I did pick up some stuff in the car as I went by police. I wish Opto would add an option to lock out portions that you don't want to sweep. (like fm radio or TV) and it is not to easy to find the frequencies going with the ranges they have. I liked it a lot more then the Explorer. It is a good size for a pocket and under the right conditions, works great without lugging around a bunch of gear.

2145. PCR-1000 Mailing List (see http://www.qth.net)

QTH.Net Digests and Archives (for subscribers)
k7on@qsl.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
pcr-1000 and subscribe pcr-1000-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe pcr-1000-digest
unsubscribe pcr-1000

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index pcr-1000-digest

and get a list of files that are available by request.

Here is an example:

```
>>>> index pcr-1000-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048
```

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get pcr-1000-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/pcr-1000-digest.archive

> GREAT SERVICE!!!!

I played with one never had to id's come up thoe I imagine this would be pointless. It only shows you who your listing to unless you have your scanner hooked to something like your computer running TRUNKER.- (This is what I use) You can watch all the pages and who's keyed up and who your listening to.

The programs on this page might help you understand more how it works. http://www.flink.com/users/unholey/index.htm

I know as soon as someone keys up they are instantly diverted to a clear channel a guess the number of frequencies that are in the trunking system are the max. amount of people that can key up at the same time.

Moffett Field is under the control of NASA.

NASA has a EDACS UHF trunked system operating there.

Repeater outputs are

406.5500
407.3500
408.3500
408.9500
409.7500
411.3500

For Airfield info go to http://airnav.com.

Moffett designator is NUQ.

Regards

Ed

That is not within the realm of feasibility. The
PRO-39 does its "step" thing according to the firmware
programming inside the CPU...which cannot be accessed
or changed.

The PRO-39 is capable of hordes of other mods, though.
Like 12,800 programmable channels....computer control,
and lots more.

Actually, Kerwin, I have three BC-210s (all are the 10-channel models). All work, but one has a broken on-off switch, so is turned on/off via the power cord. They are great on the low band, and I park them on single frequencies and only occasionally scan/search. Wish my BC-250 had lasted longer.

> are now posting rrom mci.net?

You must not be paying attention to recent posts.

About 2 weeks ago I stated I was looking to change ISP's, & was strongly considering MCI. The primary reason for this was to get 56K access which
Sprint does not provide, plus a local access number in Sioux City. MCI provides both of these.

A simple review in Dejanews could prove this fact.

YOU are acting like an opportunist & trying to use this to your selfish advantage.

PLEASE join us in ENDING these pointless flames & redeem yourself from being a trouble maker.

Several days before the accusations that I had lost sprint access
I made a statement on this NG that I was thinking of changing
my ISP to MCI.

YOU are trying to be an opportunist & using this action I took
to make yourself look good.

> Show us what a man you are Mackey....stop responding. You know as
> well as we do that if the drivvel stopped on your end, we'd all go
> back to scanner topics.

Show us what a man YOU are & stop causing all the touble you can. Join
us in ending the problems here & redeem yourself from being a trouble
maker.

> flames, nor make any undeserved snide smart-assed comments.
SNIP
> But I will be ON-TOPIC and
> I will address raised issues at an equal level at which
> they were raised.

No Bill, already you are trying to find loop holes to justify
your inappropriate actions. Regardless if you "originate" the
comments or if they are "deserved", the deal was "NO .... comments
or ATTACKS". THAT MEANS "NONE"! Comprende'?

> And I *never* attack anyway.

Bullshit, *MANY* people could prove you wrong.

Do you want this to stop or not Bill? I'm ready to
start in on you all over again & make your life a living
hell if you want to keep going.

> I say you ain't got a hair in your arse, but I think

Actually, you have already broken the deal so that shows
YOU are the one with no hair on their ass. BUT, I will
give you a grace period for the previous day to start this.

> You leave them out of it. People, like your sweetie
> punkin OBFD, are still going to try to have a go at
> me. If I am to ignore them, then you will ignore
> those who want some of your arse.

Bill, that is the deal, I'll ignore it ALL if you will.

Those trouble makers will show themselves to be just that.

> Noooooo, it will start when we have ACCEPTANCE of the
> terms. You like what I offered above, then ACCEPT it,

> and it starts at the instant you accept it and publicly
> say so to where I can read it. I'll keep you off my
> Shit List until I see it accepted or rejected.

OK Bill I could accept it. However, I need to see EXACTLY
the same from you. You, BILL CHEEK, need to review what
I have offered you and "then ACCEPT it, and it starts at
the instant you accept it and publicly say so to where
I can read it". Upon receipt of YOUR message accepting,
what I have offered you we're locked on to this.

> If you don't accept it and have a counter offer, then
> it starts at the instant I post my acceptance of it.

It sounds like we're on to something here Bill!

I find them all the time, still working (if you spend 20 minutes pushing the
buttons to get the keyboard working). If they lose anything major, the next one
is just an estate sale away. BC-210's do usually outlive their owners. Maybe
because they haven't been turned on in 15 years. I used to buy them cheap (when
they were still fairly new) when the solder on the internal whip receptacle
would get cracked & they would go deaf. Anyway, there is no "priority channel"
like having the requency active all the time! They are also great for distant
lowband channels with a dedicated lowband antenna.
Many tell me the BC-201 was a real dog, but with a new keyboard, mine
works fine. I guess it just depends what you expect.

hello
I'm curious if you know the latest speed enforcement freqs that CHP
currently
uses. I use to find them on 42.340 (blue ch.-simplex). I don't hear much
air-
ground traffic anymore. Please advise. Thank you.
garret

Does anyone know the new aero CHP frequencies (Air to Ground?) Used to be on 42.340 MHz channel blue. Is CHP using new frequency? If so please send it to me.

Thanks,

Scanning

Nothing has happened to him. Some people just don't like his advocacy of alternative scientific viewpoints. For example, cold fusion is real, you can build a motor from all permanent magnets, and you can destroy viruses by electrifying your body. Those are the ones I'm aware of, anyway.

Ground stations are 454.700 to and including 454.975 in 25 KHz steps.
The aircraft stations transmit 5 MHz above. These are the freq
estanblished for air-to-ground service for general aviation ("private"
aircraft).

Commercial airliners with phone service for passengers are on different
systems that use channels in the 850/895 MHz neighborhood.

Bill - I have a deal for YOU! (I feel like making a deal with you
is like making a deal with the DEVIL! But, I am willing to try.)

You ask me (above) to do a solid week of on-topic posts. GREAT,
IF YOU WILL MEET THAT SAME CHALLENGE! Will you do it Bill?
ALL your posts will be ON-TOPIC, NO FLAMING, NO SNIDE SMART-ASSED
comments or ATTACKS. You have to make this for ONE WEEK, SEVEN DAYS!
Also, NO posting under fake alias ID's either!

What do you have to say Bill?

And what about the rest of you like CB guy, Richard Kendrick,
MAlexander,
Dan441,and all the others that have involved in causing the trouble with
Cheek?
Could you all also accept this challenge? Show your TRUE intentions of
either
the benefit of this NG or your own pathetic selfishness.

Let's END THIS NOW! I ask you ALL to join me in making the necessary
changes to this newsgroup for the betterment of it.

Let's start this at 1915 hrs Pacific time.

If you are in the Houston area, near the NASA mission control, then tune your scanner to 171.15 mhz. That is the live audio feed for air to ground radio traffic for the shuttle missions.

Cross-posted to:
rec.radio.cb,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.scanner

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 12
grain of wheat bulbs $10 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

TIM, why is it you have to ask Bill to do anything before you do? Aren't you.... oh, never mind, you aren't.

> ALL your posts will be ON-TOPIC, NO FLAMING, NO SNIDE SMART-ASSED
> comments or ATTACKS. You have to make this for ONE WEEK, SEVEN DAYS!
> Also, NO posting under fake alias ID's either!

Yea right TIM.

> What do you have to say Bill?

If you even gave a hoot about peace around here TIM you would have quit posting your off topic crap YEARS ago.

..and then you whine,

> And what about the rest of you like CB guy, Richard Kendrick,
> MAlexander,
> Dan441,and all the others that have involved in causing the trouble with
> Cheek?

Now TIM, you said it was only a few. Why would these few matter to you?

Right TIM. You don't have to ask anybody anything if you were sincere TIM, you would just do it. just do it

> Let's start this at 1915 hrs Pacific time.

You should have started years ago TIM. Now you got you butt wacked for being a fool so now you can't bury the truth with forgery and rouge cancels, and up pops this game. You are the freak with a thousand excuses

TIM. What next?

You can get "hole caps" for standard sized holes,
either rubber or chrome. They look like they
belong there, so it's usually not a problem.

Small holes are, of course, best drilled. Larger
ones are best punched using the proper size hole
punch. The kind you turn with a wrench don't cost
too much and always find a use to the experimenter.

Greenlee is a good name in hole punches. Ask around
at the electronic stores or look in the electronics
catalogs.

Easy. It's not possible. The hobbyist should
always buy the scanner that has the desired
coverage. There is no way to get any more than
what it comes with, short of a "converter" and
those cause more problems than they solve.

Under certain circumstances, it can help the
antenna capture signals better, more so on HF
and below; less so with VHF and above, but?????

Primarily, however, it's for lightning and
AC power safety.

Sorry if I'm asking a stupid question but....
Wayne Green, I know of him from the good ole days as editor (creator)
of 80 MICRO, the old TRS-80 magazine when the Radio Shack computer was
at its zenith. (Showing my age I guess)
My memory recalls that he was indeed involved in other publications
(radio, etc..) but I am new to the "scanner" groups having just
recently purchased my first scanner. (Relm HS200 and dont know why I
waited all these years. Been having a great time with it.)
But my question is this:
Your statement,
"Sure glad you told me...Now I can be sure not to listen to his
heartbraking crap", has my curiosity up.
What "heartbreaking crap" has happened to Mr. Green?

Best regards,
Gary Robinson

P.S. If you reply by email, remove "@cleanspam" from the my email
address.

Bullshit. You ain't got a hair in your arse to try.

> You ask me (above) to do a solid week of on-topic posts.

Yes. Like asking pigs to fly.....

> GREAT, IF YOU WILL MEET THAT SAME CHALLENGE!

Easy when I get you put back on my Shit List.

> ALL your posts will be ON-TOPIC,

Sure, Smacksie.

> NO FLAMING, NO SNIDE SMART-ASSED comments or ATTACKS.

Right, except that I'm not subject to YOUR critique.
You aren't qualified. But I will NOT originate any
flames, nor make any undeserved snide smart-assed comments.
And I *never* attack anyway. But I will be ON-TOPIC and
I will address raised issues at an equal level at which
they were raised. Like, if some weirdo doesn't like
how I tell 'im his scanner ain't cellular-capable, then
I will deal with him on whatever level he originates,
short of downright flames. I won't address flames, period.

So long as YOU don't.

Let's put it this way, Smacksie....first of all, YOU don't
talk *to* or even *about* ME, don't even insinuate things
about me, and I'll abide the same about you.

Secondly, we talk *strictly scanners and scanning*. And no
half-assed efforts, either. No token posts. No bullshit
like, "Yes, that is a very good scanner." ON-TOPIC posts
that are to count must contain elaboration and detail.

And if you don't want me to respond to others' provocative,
flaming posts, then you don't either! We step to the beat
of the same drummer, Smacksie, or I walk up your sweet
patootie with another Size #13EE.

> You have to make this for ONE WEEK, SEVEN DAYS!

No more and no less than you. Wanna go for 2-weeks?
Propagation delay and people's late reading of the
posts won't get much accomplished the first week.
Let's go for TWO?

> Also, NO posting under fake alias ID's either!

I don't do that anyway.

> What do you have to say Bill?

I say you ain't got a hair in your arse, but I think
it would be fun to see you post about scanners and
scanning for the first time in your Life. Just don't
talk to or about me. Don't respond to anything I post
and don't refer to anything I post. Don't even THINK
about me. Got it? You erase me from the cavernous
void of your mind. And I don't think or talk about you.

> And what about the rest of you like CB guy, Richard Kendrick,
> MAlexander, Dan441,and all the others that have involved

You leave them out of it. People, like your sweetie
punkin OBFD, are still going to try to have a go at
me. If I am to ignore them, then you will ignore
those who want some of your arse.

Just you and me, Smacksie. Nobody else matters in this
deal. Deal?

> Let's start this at 1915 hrs Pacific time.

Noooooo, it will start when we have ACCEPTANCE of the
terms. You like what I offered above, then ACCEPT it,
and it starts at the instant you accept it and publicly
say so to where I can read it. I'll keep you off my
Shit List until I see it accepted or rejected.

If you don't accept it and have a counter offer, then
it starts at the instant I post my acceptance of it.

That's how to deal, Smacksie.

> Any advice would be great.

Ooohhhhh, tough call, pal. Several guys recently
posted that they'd gotten the royal shaft for
buying that way. There is no sure-fired way to
guarantee a safe bet, but C.O.D. is sometimes
helpful.

You pays nothing until something arrives. Of course,
you have no assurrances that there won't be a brick
in the box, but at least you get "something". Credit
card payments are always good, except that individuals
usually can't get payment that way.

This is really a tough call. Call the guy up and chat
with him for a while. Then trust your gut feeling.

If you are any judge of character, you'll get a "feel",
so trust it.

Is this your standard reply to all of us John ?

How could I be always in the middle when I have only posted a few selected messages?

I never said I had any info on a warrant for Bill. I only asked IF he cared to confess to one.

-=KA0SSF=- wrote:
>
>
>
> Yes, there is an accusation that Bill has/had a warrant for crimes
> involving children with a sexual nature, but untill PROOF can be
> presented, I would NOT accuse him of this.

You forgot the above posting of yours John, why did you even post it if you did not have the information in front of you and you were not accusing Bill of any wrong doing.

Lets see if you can behave on the newsgroup, this is my last reply to you , but if you respond to it in any shape or form it means you don't want a truce .

I don't think you can go one week let alone two of not flaming or responding to any other persons off topic post.

In the Bakersfield/Kern County area CalTrans is 800 conventional, not
trunked.
Try that and see what happens. Good luck ...

>I am looking for comments from anyone who has used
>any of the BearCat Detectors mentioned above.

Have or have had all 3 of these radios..... the BCT-7 is
a nice radio.... but not real good for "beartracking"
I think its a double conversion radio, and a HAM repeater
keeps setting off the warning signal & lite. (good note is
that it is somewhat programable and it does the CB band)
The BCT-12..... can't tell you how well this unit works
for "beartracking" IT IS GREAT!!!!! also does 800 mhz
(not trunked) the Weather Alert is pretty neat too.... set it,
and no matter where you are listening at.... HP (highway patrol)
LP (local police), DT (dept of transportation), If the National
Weather Service (NOAA) sends out a signal forbad weather
the BCT-12 catches it and switches to the WX band!

The BCT-10.................. AVOID !!!!!!!!! Not even a good
attempt! Got rid of mine.

I recommend Governmenmt Radio Systems, you can get it at HRO or Scanners
Unlimited.
Very concise & accurate to the tee.
Or just ask the for author on 444.800Mhz (179.9)....

Then again, if you're just 'getting your feet wet'...

Why would you want to start with 100 channels? Seems to me most new
users get flooded with too many channels to scan at once. I don't mean
to suggest that this'll happen to you, but information overload can be
downright dangerous.

It might be wiser to get a new scanner with a few limitations to start
off with. See if, once you get your feet wet, you like the hobby (not
everybody does). For what it's worth, the pro-2056 was $99, last time
I checked. It's a pain to program, but it's preprogrammed, lets you
add 50 channels, scans quick, and you can use it for a supplemental
receiver if/when your area goes trunked. It's almost always easy to
find something interesting below 512 mhz :)

*remembering listening to LAPD on a Regency MR-10 broadband VHF (tube)
tuner. Them sure were the days. Come to think of it, I think that
radio's out in the garage. (dialing) Hello, ebay?*

Thanks for introducing me to *this* hobby, dad!

Just my 2ï¿½...

Somebody peed on my email address. To reply, please clean up the pees.

Eubie Blake lived to be 100 years old (something like that). And when he was around 98, an interviewer said to him: "Mr. Blake you have smoked and drank alcohol all you rlife, yet you're celebrating your 98 birthday. To what do you attribute your longevity?"

"I don't know," Blake replied. "If I had known that I was going to live so long I would have taken better care of myself."

>>I am thinking of purchasing a scanner from someone through this newsgroup.
>I have never bought anything over the internet, without seeing the merchandise
and making the exchange in person. How can I be sure of not getting cheated.

This is one of those frequent questions that just as frequently has no real answers. Short of being able to use a credit card (not likely) there is not real protection; certainly there are no guarantees. Yet, people do it all of the time. I have sold 5-6 scanners and no one has ever complained of getting something other than what I said it would be.

If I were buying, I would be more likely to trust someone who is a regular poster here (other than John Mackey, of course) than a complete stranger. If that person said that he or she had sold other stuff before, I would ask for a referenc, if possible. Finally, I would make sure that I had all of the info necessary: address, phone number--home and office--and so on.

No guarantees, however...

If you have a local store that sells scanners or ham gear you might try there.
If not, then try Russell Industries Inc.

I purchased a Russell replacement whip about 15 years ago from ABC
Communications in Shoreline, WA.

The Part no. was: ST-3H.

"Universal UHF and VHF antenna for Bearcat Scanners and
transistor radios."

Description:
5 section telescopic whip antenna with base threaded to fit Electra
Bearcat base scanners.

Length collapsed = 5 1/2 inches.
Length extended = 22 3/4 inches.

Contact info for Russell Industries:

You have a 210 that still works after 20 yrs? Mine expired after 7. All
those custom chips that they didn't make enough of for spare parts.

2238. New Washington State Patrol freq.

Newsgroup: rec.radio.scanner
Date: 1998-04-20 00:00:00 UTC
From: bd703@scn.org
Message-ID: <Erpq3J.Mv6@scn.org>
Source record: 162949

The "Area" dispatch freq for WSP in Snohomish Co. (Everett) has changed.

The new REPEATER output is on 155.655 mhz.
This freq is also used by the Kittitas Co. Sheriff (Ellensburg) and
some Washington Department of Corrections facilities.

The old SIMPLEX dispatch freq, 154.845 mhz is now the input for the repeater.

I have a Motorola SP50 UHF Radio used only 5 times in Brand Spankin' New Condition with antenna, full capacity Nicad pack & drop-in rapid charger. This is a two channel radio and will transmit from about 400mhz to 470' something mhz. The radio is about 1 year old if that and is a full powered radio with the option button programmed for low powered 1 watt setting when full power is not needed.

No reasonable offer will be refused.

I would be willing to trade it for a Yaesu FT50R, ICOM 706MarkII or any HF base radio that is is either last years model or current model.

Remove the 'X' from my EMAIL address to reply. Send all offers to me in email: xandrew@tropicom.net

2241. Trunking Group Codes for City of Santa Clara, CA?

450 MHz Air-Ground Mobile Phones

Below are the freuqncies for the 400MHz air-to-ground telephones found in privat
e Aircraft. The transmissions on these frequencies are FM. Cities throughout t
he country have been allocated anywhere from one to three of the channels listed
below. Those channel alllocations are listed below. Keep in mind that all cha
nnels may not be in use in a particular area.

When monitoring these frequencies, be aware that the ground stations repeat the
airborne half of the converstion, but transmit an annoying continuous tone when
not in use. If you are within range of the ground station and want to avoid the
tones but hear both sides of calls when they're made, you can do so by programm
ing both frequencies into your scanner. Lock out the ground frequencies when sc
anning, and when a call is received from a plane, manually step up to the ground
frequency to hear both sides. If you are out of range of the ground station, y
ou will only be able to hear the plane side of the conversation. This service i
s used on private aircraft.

Channel 1 - Ground 454.950
Channel 1 - Plane 459.950

800 MHz Air to Ground Telephone

These are the frequencies used by the airlines for air-ground phones. The trans missions on these frequencies are AM, with the channels spaced 6 kHz apart. The ten blocks of 29 have been assigned to various areas of the country, and cities having the same block are separated by at least 300 miles. The allocations are listed below. The ground frequencies do not echo the airborne half of the conv ersation.

Block 1, Channels 1-29 (Ground) 850.8055 - 850.9735
Block 1, Channels 1-29 (Plane) 895.8055 - 895.9735
Block 2, Channels 1-29 (Ground) 850.6055 - 850.7735
Block 2, Channels 1-29 (Plane) 895.6055 - 895.7735
Block 3, Channels 1-29 (Ground) 850.4055 - 850.5735
Block 3, Channels 1-29 (Plane) 895.4055 - 895.5735
Block 4, Channels 1-29 (Ground) 850.2055 - 850.3735
Block 4, Channels 1-29 (Plane) 895.2055 - 895.3735

David...

GME TX5000R is the (R) remote head model of the
TX5000 series UHF trunked radio transceivers.
Similar
to the TX4200 UHF CB series but certified for the
commercial
trunked networks. You will be able to get a
manual from GME.

Regards

Ken

batwanger@aol.com (BATWANGER)
> ... to program Trunked freq.s ... The Group I want to listen to
> starts at 935.3875 and they have like 10 or 12 freq's.

900 MHz trunks are assigned in 5- or 10-channel groups, with frequency spacing of 12.5 kHz. The Industrial/Land Transportation group begining with channel 31 would cover 935.3875 thru .5000. Mobiles are 39 MHz lower. Two caveats: The Uniden TrunkTracker does not cover these trunks. There is also another assignment plan which is seldom used. Under that plan, the trunk would cover 935-939 MHz, on the .3875, .4500, .8875, and .9500 channels.

I notice you avoided my question regarding if you are aware of the
saying
"walk your talk"!

Why do you insist on trying cause trouble here on this NG?

I have a deal & challenge for you. Do you really want this to end
or do you want to cause trouble for your sick pleasure?

See the message I wrote to Cheek, "making a deal with the devil". YOU
are a part of this.

2253. Grounding Antenna

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: c@cern.net
Message-ID: <353bfa84.10556620@news.snet.net>

Question

Why is it necessary to ground an antenna. Im experimenting with a few small antennas with coaxial cable in a 3rd floor apartment and want to know the importance of grounding.

Thanks Cp

Before you do take a good look at the Yupiteru MVT-7100.

For $305 it does everything the Icom does with the exception of computer control, and does most of it better.

Source record: 162727

Well I have had lots of tire kickers but no sale yet.

I have a nice Icom R7000 25mhz to 2 ghz all mode receiver for sale. It is unblocked, looks and works great. It is mounted in a nice EEB rack panel with an external speaker, has the RC-12 remote control with it. It has a Deltacom interface but I dont know if it is good or not. Has the manual but no box.

Price is $750 shipped in the US.

I would consider trades of the following:

Standard 5718 or 5900 dual band mobiles.
Yupiteru MVT-9000 or 7100 handhelds.
Icom 706

Or other shortwave/scanner/ham gear.

Let me knmmow what you have.

2257. Re: Grounding Antenna

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: -=KA0SSF=- <jmackey@usa.net>
Message-ID: <353BEC5A.3F70@usa.net>
Source record: 162728

One the primary reasons for grounding an antenna is for lightening protection, & making a 360 degree loop in the coax near the antenna will also help.

For the sake of your tests, you can probably do without the grounding & for mounting in a 3rd story apartment you may not really get what is truly considered a an RF ground.

Grounding also helps eliminate noise , mostly at 50 Mhz & below.

Thats right John but don't forget the opitional use of the BLITZ BUG in the coax line to bleed off the large discharges present from lightening stikes. In an apartment for tests I would not worry about it much>

Working FLEX decoding with source!!!

If you have not yet checked this out, go now!!
http://www.geocities.com/CapeCanaveral/Launchpad/4039/
The docs suggest building a more advanced
interface, but the normal circuit I use for mdt and
trunker works excellent! Its an easy job to put the
suggested circuit together anyway, think I'll do that
to see if I can get any better results.
Some very interesting theories about future digital
hobby monitoring here, I hope the innovations keep coming.

2263. Re: FS or Trade Motorola SP50 UHF

do you know how to program the sp50vhf radio or where I can get the
cables for the computor and software for this job?????

2264. Re: How do I keep track of 200 channels???

I use Excel 97 pro. It works great and I can make changes all the time real easy.

Jon

Here is a 10 second sample of the freeware FLEX decoder!!!
FLEX is quite a bit faster then 2400 pocsag...WOW!!!
All this with a normal hamcomm interface!!!!

Hi all,
I just got a Pro 90 and started playing with it a bit.
Here is what I found;

2 & 9 and turn On Clears the Memory

2 & 9 & 4 and turn On ROM version and crc check? (mine was 1.01 88ccH)

2 & 9 & E and turn On Display test

2 & 9 & TRUNK and turn On Load test freq. in channel 1-19
2 & 9 & SCAN and turn On Load test freq. in channel 1-19

2 & 9 & HOLD and turn On Load 144-149 freqs. in channel 1-300
2 & 9 & SRCH and turn On Load 144-149 freqs. in channel 1-300

2 & 9 & DLY and turn On Displays 000 0F (eh?)

2 & 9 & . and turn On Displays H or L (eh?) (it's the period key)

2 & 9 & SVC and turn On Cb 22222 press TRUNK Uc 33333
some Freqs. are loaded in channels 181-200, 221-232, 241-261, and 271

If anyone can elaborate I'd love to hear from you!
Thanks,
Rick

Thanks for the reminder Hamboner!

That is something that definately needs to be done in parts of the
county
where electrical storms are common.

You are finally getting on the right track Glenn.

But, where does that leave YOU Glenn? One need only look at a few
posting
in the history of various newsgroups to know that you have been the
center
of MANY frenzies. (remember rec.radio.swap in 1995 for example?)

PLEASE Glenn, join us in changing this NG for the positive, rather
than continuing to post flames.

> The audio isn't as good as the 51's, however. But it's worth it.

Or you can buy it and pay a few cents for a resistor and do the "squelch tail mod" to it. I did it to my Pro-51 and it works just fine, and that annoying tail is totally gone!

No John, you are just as dishonest and low life as usual. One has to say if you quote out of context of or leave the main thrust of a quote out you must agree with 100%. What I said was:

----- start quote -----
Let's agree and say the above is 100%. Where does that leave Mackey (TIM)? You all but said it, Bill has been trolling for years and Mackey has bit every single time. TIM must be one dumb fish, ehh?
----- end quote ------

Yes John, you are just Bills little dancing dog. He snaps his fingers and you yip.

> But, where does that leave YOU Glenn?

Far above you TIM. Ok, that say next to nothing but it still holds true.

>One need only look at a few
> posting
> in the history of various newsgroups to know that you have been the
> center
> of MANY frenzies.

It is funny, no pathetic John that you have said the very same thing to many many different people. Everyone is a trouble maker except John. Do you have a macro set up for that pitch? How is it you are always saying that to so many people?

(remember rec.radio.swap in 1995 for example?)

Oh, 3 years ago when you posted under the name JEMJ? Yep, I remember it well. One of your Oregon buddies Joe (HRE)was posting goods on rec.radio.swap. What he failed to tell anybody was those items he was selling were from his store. Joe had a few other honesty problems

also(remember when he said he was the only ham radio store within a 1000 miles? Yea, you pal Joe). Guess who started a flame war when I brought it up that Joe was posting commercial stuff as if it was personal equipment for sale? TIM. You were off to the races defending this low life Joe of HRE. Oh yea, you also came driving through the I-5 corridor and got on the repeater I used and acted like a CBer ranting, raving and cussing. I had two different hams call me that day about it. Of course you will deny it. I only have 3 witnesses. The last time it was verified on here you all of a sudden dropped the subject. Yea TIM lie away. It is what you do best. It's all you do.

> PLEASE Glenn, join us in changing this NG for the positive,

You changed it to trash TIM. Don't play this "save the ng" crap on me. You are only doing this because so many people now have you by the short ones. Your ISP search will start in minutes if you go back to you old ways. You can't handle the truth and you can't hide from it any longer. Nobody like you and you can't be the NG irritant any longer. You are washed up TIM.

>rather than continuing to post flames.

John, I have about 150+ posts to go this month and about 1000+ posts for the year to even come close to matching the number of off topic posts you have made. You are the last person on rec.radio.scanner to talk about continuing flames. Sheesh!

2279. Re: a warning to Cheek was:Re: Making a deal with th DEVIL!!

Jonh you state that you want the flaming and off topic posts to stop.
But you continue replying to others posting and that makes everyone
believe that you want this to continue.

The only way it is going to stop is if you ignore the other postings and
let the threads die off instead of adding to them.

Dan

Hi all,

I have a Alberta freq listing which is about 2 - 3 yrs old. I am wondering if Parks Canada / RCMP / Fire / Ambulance have got new frequencies since? I am planning on visiting the park in May !! If you have a updated frequency list that I could check against my book I would be very grateful.

Thanks.

Chris ..

One word of caution, a lot of telecom power supplies float battery banks and aren't designed to handle heavily modulated (varying at syllabic rates)loads. Others are designed to run banks of equipment without batteries, and experience a fairly steady load without appreciable speech modulation because their big load is really made of an awful lot of small ones, and their modulations don't correlate.

Powering a big class A/B power amp handling a single SSB or OOK Morse signal is a particularly interesting challenge for a switch-mode power supply design. A lot of available supplies could misbehave, and MRF154s are awfully expensive....

I've had them both! Contrary to what you say, the MVT-7100 is very easy to program (one of the easiest that I've owned because of the rotary knob) and the audio quality is very robust (better than that of the UBC3000, I think). It is terrific scanner, especially for $300 or so that a number of overseas suppliers charge for it. I recommend it highly.

The main thing that I liked about the UBC3000 was its lightening-fast search speed. Are you aware that although the UBC will tune cellular, it does not search in the requisite 30 KHz steps? If cellular is something that is a big draw for you, you should definitely go with the MVT.

Well so much for the "truce" that you proposed, slime child. You posted a dozen (at least) off topic posts along with this one.

It was quite apparent that your proposal was yet another ploy. One doesn't expect a well-known cretin to be honorable.

So here's the deal lowlife: You post one off-topic message and you get 5-6 replies in return from dozens of people who despise your guts. Don't post a single off-topic message and no one has anything to reply to. You want it to stop; then stop. You won't but I figure that if I spelled it out in crayon mode even an ill educated moron like you can get it.

> these two models and your reason for them.

The benefits of the BC235 are great interference rejection, and of course, TrunkTracking. It also comes with pre-programmed service search which some find useful.

Compared to it, the BC3000 has 400 channels in 20 banks, selectable receive mode and step size, wide-FM, better audio, auto-store and attenuator. But it is a rather large radio.

I've written a review of the 3000 as well as a First Impressions article of the 235 which you might want to read. If so, go to my home page below, follow the link towards the bottom of the page for radio reviews and find my list of receivers.

Happy reading and best of luck with your decision!

Anyone know if it is possible to program a trunked radio to monitor a Motorola Smartnet II trunked system without having the radio log onto the system? I could buy a Trunk Tracker, but I would rather use a dedicated trunked radio, such as a Spectra or Syntor.

I suspect that the radio cannot be programmed to do this without some hacking.

2296. Pro-64 priority question: anyone else have this problem?

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: peter_rothschild@sra.com
Message-ID: <6hiepjqth1@nnrp1.dejanews.com>
Source record: 162767

I recently picked up a Pro 64 because I like the 10 priority channels, but I have been a little disappointed in how they work. The radio often does not notice activity on the priority channels for 10-15 seconds, long enough to miss entire conversations between dispatchers and police cars. I can see the display flash every two seconds as it checks the priority channels, but it can blink 5-10 times before switching to a priority channel, meanwhile I can hear activity on one of the priority channels through another scanner. Some of the priority frequencies are also in my regular banks, and it will stop on the signal in the bank for a long while before switching to the same frequency in the priority bank. The signals it is failing to notice are not weak, they are strong enough that they come through even with the squelch near max, although I keep the squelch near minimum. The darn thing just doesn't seem to notice that they are there. I can test this by putting a continuous broadcast like weather into a priority channel, and watch it take several scans of the priority bank before I hear it.

Does anyone else have this problem, with a Pro-64 or any other model? Is this an inherent problem with the Pro-64, or do I have a lemon? Is this due to the 64 scanning the priority bank at a higher rate, so it is more likely to miss a signal?

Just to clarify things, are you talking about RF or DC ground ?
Some people confuse the two.

Certain types of antennas require a counterpoise which gets connected
to the 'ground' or shield of coaxial cable in order to work properly
at RF. This is to keep the impedance of the antenna around the same
value that the radio wants to 'see', typically 50 or 75 ohms.
This is predominant where unbalanced feedline is used to
connect the radio to the antenna as is coaxial cable.

DC grounding is more a safety issue. This would not help the
performance of the antenna *unless* the ground wiring is acting
also as a counterpoise as explained above.

Hi Peter,
Recalling from memory, I think this is a "wacko" design issue of
the PRO-64 and its base counterpart, the PRO-2041.
While the priority bank can have up to ten channels in it, a
channel from that bank will only be samped once every two seconds.
That's right..."a" channel, as in singular. So if you have all 10
programmed, it will take roughly 20(2 secs X 10 channels) seconds
for it to check each frequency.
While the PRO-64 doesn't mention this mode of operation, it
is probably an error/oversight. It states that the priority "channels"
are checked every two seconds. From the Tandy web page for the
PRO-2041, we have :

USING THE PRIORITY FEATURE

The priority feature lets you scan channels and still
not miss important or interesting calls on the priority
channels. You can program up to 10 frequencies as the
priority channels. When you turn on the priority feature,
as the scanner scans channels. It checks one of the
priority channels every 2 seconds for activity.

While I have not explicitly checked the PRO-64, I have confirmed
it on the 2041 and see no reason why the 64 would operate differently
since they are the same radio and should have the same firmware. Or
perhaps GRE realized their boo-boo and fixed it in a later version?
Your description seems to confirm that your 64 is checking only a
single channel every two seconds.
What monkey designed this approach I'll never know but I
guess even GRE gets the chance to fumble the ball now and again.
I too missed this point in my original of the 2041 review until
someone pointed out to me who was experiencing the same thing
you are. Now that I think about it, I'm not sure why more people
haven't come forward with this "feature" ;-)

I just bought a PRO-64 last weekend. It was the display model, but was in good shape. I am wondering if they left something out. Sounds like it from this post. Should I have had an offer for free file transfer software and cable for 29.95?

When I asked about the data interface kit at Radio Shack, they looked it up and told me it was $129.99!!!!!! Which is almost as much as the scanner cost! I asked them to double check that because I couldn't believe RS would charge $130 dollars for a cable! If I should have had an offer for the cable at $30.00, then I am going to call Radio shack.

Can anyone confirm that I should have received a warranty card and an offer for the data interface kit. Thank you.

Steve, my experience with windshield antennas has been very poor. If you care to, try an "L" shapped antenna mount on the front fender. Pop the hood, drill two holes on the inside of the fender and mount the "L" shapped antenna mount there. Run your coax through the fire wall. I have two mounted on my blazer and they work very well. One is for a scanner and the other for a public safety two-way radio.

The antennas are hole mounted on the "L" bracket. These brackets can be made or bought at most commercial two-way shops for a nominal price.

>WindRadio)."

<snip>

You do have a point in saying that no matter what piece of high-tech
you buy today is already becoming obsolete the next day. This applies
to ISA as well as to the RS-232 bus (to be replaced by USB). Icom's
receiver (which for some reason you are pushing in your message) is
not something to recommend over Winradio.The scanning is painfully
slow to start with (for any respectable VHF/UHF receiver) and its
software is so bad that it could only be written in Japan. As to being
"technologically advanced", consider that it does not even run on
Windows NT (while Winradio does). However, I don't wish to be drawn
into discussions of individual merits of these two radios. I think
that both have good and bad points. Suffice to say that I find your
opposition to Winradio to be too hysterical for me not to become
rather suspicious. Are you on Icom's payroll? If so, then Icom must
be really desperate.

Chris

P.S. As to ISA, you might not know that most of the world's industrial
computers run on it, and many specialized cards (such as data logging
and other instrumentation) are still being designed around it. This
huge investment will not disappear overnight. By the time you will
throw out your old ISA PC, you will be ready to throw out your radio
with it (Winradio or Icom), because they will be both long superseded.

.

2311. PA State Police TAC 1&2

Newsgroup: rec.radio.scanner

From: ScanMan@any.frequency
Message-ID: <353D0EC0.77B6@any.frequency>
Source record: 162782

With the summer months here, the PA State Police TAC frequencies are quite active. Check the road side and in the air, you're being watched via radar from the road and the clock is running from the air.

PSP is very active on - 155.46 & 151.49 - PL 186.2 both frequencies.

These frequencies are being used by PSP for traffic control, aka speed traps - state wide.

Yes, that is patently ridiculous.

> If I should have had an offer for the cable

Don't waste your breath.

> Can anyone confirm that I should have received a warranty card and an offer
> for the data interface kit. Thank you.

Well, I don't know of any such, but even a $30 cable
and software is absurd considering you can make the
cable for five bucks or less and get the software for
free from:

http://hruska.home.mindspring.com/pro-prog.html or

No, Smegma Breath! You do not get to CALL the shots. You
can only offer....and then I will decide whether to accept,
reject, or amend. You got an amendment, Dingleberry!

> > And I *never* attack anyway.

> Bullshit, *MANY* people could prove you wrong.

No Smegma Breath, that is patently untrue, UNLESS, of
course, you are referring to the snotwads like yourself
who attacked me first. Then, sure....just like with
you, I hosed 'em down a little. And I am likely to
do some more hosing during my time left on earth.

> Do you want this to stop or not Bill?

Frankly, Smeggie, it's up to you. You stop and see
if I don't. You don't stop, and see if I don't. Make
it a scientific experiment. Test me. :-)

> I'm ready to
> start in on you all over again & make your life a living
> hell if you want to keep going.

Ooooohhhh, I can't wait, Clingberry! Get it on. Do
whatever you think is right. But please brush your
teeth first....and apply a little Preparation H....

> > I say you ain't got a hair in your arse, but I think

> Actually, you have already broken the deal so that shows
> YOU are the one with no hair on their ass. BUT, I will
> give you a grace period for the previous day to start this.

There is/was NO DEAL until it's worked out to the satisfaction
and accepted by both parties. You aren't man enough to live
up to a deal anyway.

Just you and me, Smeggie....leave everyone else the hell
out of it. You can't speak for anyone but yourself, and
you have a hard enough time of it doing that.

> > You leave them out of it. People, like your sweetie
> > punkin OBFD, are still going to try to have a go at
> > me. If I am to ignore them, then you will ignore
> > those who want some of your arse.

> Bill, that is the deal, I'll ignore it ALL if you will.

> Those trouble makers will show themselves to be just that.

Nevertheless, just you and me, Smeggie. Everyone else
can take care of themselves. You want to ignore others?
Do it! Same as me. The deal, though, is YOU and ME,
Smeggie. You slap me on your shit list and vacuum me
from your mind....and I assure you, I will do the same.

Only....better. :-)

> > Noooooo, it will start when we have ACCEPTANCE of the

> the same from you. You, BILL CHEEK, need to review what
> I have offered you and "then ACCEPT it, and it starts at
> the instant you accept it and publicly say so to where
> I can read it". Upon receipt of YOUR message accepting,
> what I have offered you we're locked on to this.

> > If you don't accept it and have a counter offer, then
> > it starts at the instant I post my acceptance of it.

> It sounds like we're on to something here Bill!

Cool. First and foremost, it's just you and me, Smeg. I communicate with each person on a personal level, tailored and suited for that particular person and you will not have any part of, nor any say-so in my choices of dealings with others. Likewise, I don't give a hoot what you say and do about others. Just you and me, Smeggie.

However.....as has always been the case....I will *never* attack or flame someone first. If they attack or flame me, then it's my decision as to how I will respond. In most cases, I question their ancestry and then slap 'em on my Shit List, unless they show some socially redeeming value. Some do; some don't; and some surprise me. But that ain't any of your business, Smeggie.

Just you and me. And the deal is....you don't talk to or about me and I don't talk to or about you. You don't make any vague, direct or indirect insinuations about me or references to me and I'll abide the same of you.

And I will go you one better by not even thinking about you. Which....by the way.....is a no-contest. That's easy.

You want to make deals with others? Do it. Leave me out of it. I want to make deals with others, I'll do it and leave you out of it.

But for now, Smeg, it's just thee and me, see?

Accept it, and it's a deal. No further reply from me is needed, if you accept. That's the way deals are done.

The BC-100XLT is a near-clone of the uptown BC-200XLT.
The two happen to use the same circuit boards, and it
may be possible to upgrade the 100 to the 200, though
it probably wouldn't be economical.

To do that, you'd first need to get a service manual
for each and compare the two, side by side. The
differences would be self-guiding after you got
familiar with the circuits. In a word, there is a
lot more to it that just sticking in an 800 MHz sub-
assembly.

>
> BTW, I have a Uniden Bearcat BC200XLT

Good solutions are many and varied. Much depends
on your literacy in computers, though. If you are
just starting out, even the simplest solutions can
be a nightmare. Believe me....I know. I remember
when I started out on computers........

If you know your way around Windows and a computer's
basic operations, there is a low cost software package
that, literally, can change your life. Microsoft WORKS
for WINDOWS, now in version 4.5, is an integrated package
containing a word processor, a spreadsheet, a database
manager, and a telecommunications (terminal program) package.

Either the spreadsheet or the database manager are IDEAL
for tracking frequencies and doing lightning quick lookups.
For more than a couple thousand frequencies, it's hard to
beat a database manager, even though spreadsheets do okay
up to 5,000 freqs or more. Database managers offer more
power for sorting, querying, arranging, and presenting
the desired data.

In any event, if you are in the balance, MS WORKS will
not be a bad choice at under $79, and I have seen it as
low as $49 on special.

If you are an accomplished computist, then discrete solutions
may be more to your preference, including MS Excel, MS Access,

SQL Server, or other of the more powerful database managers
or spreadsheets.

2321. 3 scanners for sale! (inc trunk tracker)

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: "Darren G. Sarvis" <airpro@ix.netcom.com>
Message-ID: <353CECD1.6DE2@ix.netcom.com>
Source record: 162792
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I've purchased three scanners and am willing to sell 2/3 of them because I'm scanned out and going to be focusing on a new career (hopefully).

Here they are:

Uniden handheld Trunk Tracker. BC235XLT. With the two rechargable battery packs that came with it. Purchased from Scanner World for $259.99 late last year. Great scanner! Never used outdoors although it is designed sort of for that. My selling price is $200*

Radio Shack model PRO-26 which is a handheld 200 channel CONTINUOUS BANK (25 MHz - 1.3 GHz) triple conversion handheld. Rechargable/AC adaptor included, takes 4 AA batteries. Band range includes ham, UHF military aircraft, CB and FM broadcasts + 800 MHz. Great for conventional scanning. Purchased through Radio Shack 2 years ago for $449.00 and willing to sell for $200*

Radio Shack model PRO-2037 desktop 200 channel triple conversion scanner. 800 MHz included. This scanner is excellent for monitoring conventional frequencies or aircraft band. The gain is much better on this than most other scanners. Constant backlit LCD display. Purchased at Radio Shack close to 3 years ago for $329.99 and I'm willing to sell for $160*.

* This price + shipping & C.O.D. unless you live in San Diego which means I will personally deliver. If you want to inspect package, I believe you can do this C.O.D. USPS. All scanners in EXCELLENT CONDITION with orignial packaging, accessories and manuals included.

I hate to let these go but I am downsizing.

Thanks for your consideration. Please e-mail me personally for a response with phone number/address should you want to arrange for discussion and order.

/s/: Darren G. Sarvis

2324. Railfans and the Radio Shack Pro-64

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: Briand Sanderson <briand@nospam.ncsa.uiuc.edu>
Message-ID: <6hj0t7$ma0$1@vixen.cso.uiuc.edu>
Source record: 162795

(Email replies to the author of this post should remove the "nospam" from the email address)

I am fairly new to Railfaning, and I just bought a Radio Shack Pro-64 for this purpose. I really like the Pro-64's features and capabilities, plus the computer interface was a huge plus.

I am wondering what experiences folks who are scanning the 160-162 Mhz range are having with the Pro-64, and if anyone knows of a railfanning site on the internet that could help me here. I am finding that my Pro-64 is having some major prolems with the Railroad Frequencies. I have the Illinois Central frequencies entered (I don't have them handy right now, I can post actual frequencies if someone wants me to), but the scanner is picking up the Weather Channel frequency in my area on several of the railroad frequencies. I have double checked my programming. The scanner displays the railroad frequency, but I am hearing the weather which is from a different frequency.

At any rate, I would appreciate hearing about any others experiences in this area.

Thank you,

Briand Sanderson
briand@ncsa.uiuc.edu

You're crazy. Scanners in vehicles can, do, & should merit increased
curiosity by the po-po. The curiosity is converted into suspicion based
upon the driver's conduct, including the original reason for the traffic
stop.

If the officer isn't familiar with MCL 750.508 --and I'd agree that
most probably are not-- I suggest politely mentioning the law at an
appropriate point, offering to show the officer the photocopy of the law
which you have in your vehicle, or suggesting that he/she look it up
while you wait.

If the radio is seized and/or you're arrested for no other reason
than having the scanner in your vehicle (this is assuming you meet the
criteria for being excluded from the law against equipping the vehicle
with a scanner, & weren't doing anything else illegal/stupid) then by all
means, make a formal complaint against the officer(s). The "ignorance is
no excuse" philosophy applies to them too. The few "horror stories" I'd
heard were not the fault of the police: An idiot not having a copy of his
ham license with him; some confusion over the old "conditional" license
class wording; the non-ham wife driving the ham's car with the scanner in
it; the ham being a crime suspect where it was reasonably viewed the
scanner was used as a method to evade detection by law enforcement, etc.

I've used both my PR0-26 and AR8000 at airshows. I also have an R-10 that
can be used. According to the specs the new Sony scanner should get those
frequencies.

>system?

To program the radio you would have to have the system key and have a unit
number assigned to it. If you had that, you could program the radio to
"affiliate on PTT" rather than "automatic" affiliation.

I personally think the trunk tracker is a better choice for listening.
Motorola mobiles and portables make great 2-way radios...but lousy scanners.

I have seen a similar problem with the Shack Pro90 Trunktracker, which I love.

I have a converted Motorola PS Speaker/Mike with a mini-plug.

Seems to me that the audio which is delivered to the auxiliary jack is less than that which is routed to the speaker, and less than the audio which comes from the Pro43 and Pro60 auxiliary jacks.

Almost seems like they have a resister or some other damping type on the earphone jack.

Comments, Similar observations ??????

There's a pretty good book on railroad scanning,
"The Compendium of American Railroad Radio Frequencies (14th
Edition)" by Gary L Sturm and Mark J Landgraf.

ISBN: 0-89024-304-2

It's got US and international listings.

I know you can buy it from Grove, 1-800-438-8155.

Happy listening,

Ron

2346. Ar8000 with Scout 40 Experience

Newsgroup: rec.radio.scanner
Date: 1998-04-21 00:00:00 UTC
From: "Richard O. Kinkead" <richard-kinkead@worldnet.att.net>
Message-ID: <6hjhoc$r9l@bgtnsc03.worldnet.att.net>
Source record: 162817

I am planning to buy an AR8000 and a Scout to get the reaction tuning feature. I have some questions
for those experienced with using the combination.

1) Does the AR8000 need a modification to connect to the Scout? If it does, can the AR8000 be
purchased in the US with the modification for the scout done?

2) If I must purchase the AR8000 from Europe, how can I get it cell blocked? (Have no interest in Cell and
want no problems with Customs confiscation after I have spent my money).

3) Are there any US based companies which service the AR8000? (I saw a webpage by a US retailer which does not
repair the radio anymore because of no manufacturer support- I am concerned about this).

4) I suspect that the term "near field" means signals which originate within 500 feet +/-. Can the Scout receive signals
from farther distances much like the scanner does and still do the reaction tuning?

I am also considering the R10 and Alinco, but I heard that they are slow scanners. I might look into them
if the responses to the above questions are unfavorable to the AR8000.

Thanks for the info.

Richard

The radioshack warehouse in Barrie Ontario Canada has 20 keypads in stock for the pro 43, make that 18 as I purchased two while I was there I think they were $7.35 I cannot find my receipt or I would give you the correct amount as well as the part numbers for them. I no longer have to jump on the scan key to get it to work, also while I was there (I'm bragging now) I spotted a leather case I thought would fit my pro 43 so at $5.95 I took the plunge, man it fits perfect, I did have to bore another hole on the side for the charge circuit there was only one there for the power cord so I went down about a quarter of an inch and made another one. The phone number is 1-705-728-5694.

BTW there was only one leather case there, and my does it look good on my Pro 43 :>))

The radioshack warehouse in Barrie Ontario Canada has 20 keypads in stock for the pro 43, make that 18 as I purchased two while I was there I think they were $7.35 I cannot find my receipt or I would give you the correct amount as well as the part numbers for them. I no longer have to jump on the scan key to get it to work, also while I was there (I'm bragging now) I spotted a leather case I thought would fit my pro 43 so at $5.95 I took the plunge, man it fits perfect, I did have to bore another hole on the side for the charge circuit there was only one there for the power cord so I went down about a quarter of an inch and made another one. The phone number is 1-705-728-5694.

BTW there was only one leather case there, and my does it look good on my Pro 43 :>))

Last year, I went down to Mexico with a scanner. I was in a friend's car and I was sitting in the back seat with a scanner on the seat next to me - completely visible. We were the lucky ones to get pulled over as a random check right after entering Mexico. The federale checking the back seat saw the scanner, picked it up, looked at it, then put it right back down and kept going with his search. I don't think he had the slightest clue as to what it was. After a brief search of the car, they let us go. We kept everything (including the marijuana in the glove box :-)

I'm willing to bet that more than 80% of the cops down there have no idea about scanners. Specially on entry, you are in one of the poorest parts of Mexico. The residents of that area can't afford scanners. And what American is going to go down there to do crime? People go there to have a good time, even if you want to listen to the police scans, who cares?

I think their last concern is catching you with a scanner.

Cathy was referring to the warranty card on the Sharp PDA she just purchased. Reread her post.

First paragraph.

A couple of weeks ago I noticed that ONSALE (www.onsale.com) had the
Sharp Zaurus ZR5800 PDA for $89. I "won" the bid on a Sunday and the
5800 arrived on a Thursday. It is a very nice little handheld
"computer", and the files are compatible with Word and Excel. I like
gadgets and gizmos, I really didn't NEED this one, but my secret hope
and goal was to try to use it to program my PRO-64 and PRO-2041.

Hello,

I have one of the Sport Cat 150 scanners from Uniden. I'm having a problem with the charging jack on the scanner. The center post has started to come loose, and when I plug the charger into the jack it does not make a good connection. Has anyone else experienced this problem? If so how did you fix it? If anyone knows where I can get a jack to replace the bad one please give me the part number and dealer name. I would prefer to replace it myself and save the $49.50 + S/H Uniden wants to repair it. Any and all info will be greatly appreciated. Please reply by email (jhurst@vt.edu) if possible.

Thank You,
Jamie Hurst

With the scout, it's highly dependent on which antenna you're using and how much other noise is in the area. I've picked up cell phones at 50 feet, wireless
transmitters on TV people at 25 feet and even on clear evening, the local fire
department from more than 1 mile away. The digital filtering is pretty good.

I live about 1/4 mile from a highway intersection and from the rear of my house and a
RatShack 20-006 antenna I get the cops and taxis from the highway.

The Scout kicks serious butt. And you can wear it around with the vibrate mode,
tune your scanner, and it has 400 frequencies to save as well.

>Does anyone know where can I view a list of frequenices for
>Paramount's Great America in City of Santa Clara, Ca.?

Here is a list of the frequences for Great America. I got them from the '97
edition of police call

157.74,465.900,465.975,466.050,466.125,466.200,466.275
466.350,466.425,467.750,467.775,467.800,467.825,467.850,
467.875,467.900,467.925

There they are. they are all listed as mobile units except for the 157.74
which is listed as a base station frequency. Hope this helps

Hard cold facts Johnny boy is Sprint had warned you that they would
terminate your service if you did not stop all the garbage .
Fact you did not and continued your antics as you do now.
>
> PLEASE stay factual in your statements.
Why don't you stay factual John as 9 out of 10 statements you make are
false .

So don't read the stuff that doesn't turn you on.
Ain't nobody got you by the shorthairs forcing you
to read things......or do they?

> I would expect to see garbage like this in a teen Hanson vs Backstreet
> boys NG, but not one that is aimed at "professionals".

The "sound" of your post doesn't jive. Sounds to
me like you're interested in a good peeing contest, too.

> once again.........Give it a rest and continue this cat fight by private
> e-mail so some of us can get the information we came to find.

How exactly are you being stopped from getting "the
information 'we' came to find."? And who is this "we"
anyway? Never mind....the important thing is that if
you can control your computer, then no one "out here"
can stop you from perusing the information you want.

So fetch that cranky computer of yours a kick in the
slats, like a mangy cur, and make it live up to your
expectations. THAT is possible. It is NOT possible
that other people will meet your expectations, especially
voicing them the way you did.

Hi ya Al:

Basically, there is no inherent advantage to
using a spreadsheet over a database, but there
are inherent disadvantages.

However, for not too many frequencies, say 2-5000,
and where a person knows how to run a spreadsheet, but
not a database, then the tradeoff is probably a plus.

Spreadsheets are a bit easier to use than databases,
at least at the onset, and if all you do is sort
and do lookups, then it probably doesn't matter much.

> just a tv antenna or do I need to buy a special antenna.

A TV antenna will work....fine. It won't
work nearly as well, in its normal mounting position
like this:

---------O---------- Horizontal

Far better vertical, like this

|
|
|
|
O
|
|
|
|

As for cable, regular RG-6 satellite cable is fine,
and use a regular matching transformer at the antenna
to adapt the antenna to the cable. Down in the shack,
screw on a F-to-BNC adapter so it can connect to the
back of the scanner.

A word of caution: TV antennas are highly directional,
which means they hear best in the direction to which
they are pointed and least in the opposite direction.

2393. FS: Icom R1, drop in charger

Newsgroup: rec.radio.scanner
Date: 1998-04-22 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <6hkpvj$le6$2@node2.nodak.edu>
Source record: 162664

I have an R1, unblocked and the drop in charger along with the regular wall charger. No boxes, but do have manual. This radio has a built-in battery and also an external battery. Both batteries need to be replaced. The radio looks and works fine off a power supply. Make an offer, but be realistic. If I don't get any decent offers, I'll order up new batteries and offer it for sale later at a specific price.

|I have a 17 year old (manufactured 1/81) non-working (won't scan) Electra
|Bearcat BC300 Scanner. Since it tops out at 512 Mhz, should I: just get a new
|scanner? Or get a new one AND get this one repaired for use as a second
|scanner?

Go buy a new scanner with a much more intermod and image-resistant design...

I had a Uniden BC-300 that I purchased around 1982; by that time most
of the local mobile telephone activity was moving to cellular from
IMTS...

While the radio does have some nice features like a count of times a channel
has been hit and an eye-pleasing fluorescent display with rolling zeros, let's
face it, it's obsolete RF-design wise. The 10mhz IF means it is quite image-ridden;
the front-end is just crushed by today's pager laden RF environment. It searches
in just one direction. In mine at least, the flourescent display generated an
irritating buzz in the audio output.

Unless you intend to repair it yourself and dedicate it cordless phone monitoring
(50-channels) or other low-band VHF activity, I'd say just put it away...

Mr. Arthur. If Mackey (TIM) had a dime for every time someone gave him this advise, he could buy his own USENET and still have enough change left over to purchase a small to medium size third world country. Sadly, he never listens to the advise or get the dimes.

Hi rick.
The scout 40 is not a scanner, but a frequency counter,therefore is
really a test instrument.So its not blocked.
Hope that was some help.

Use the program called "etrunk". It works great on edacs systems, but you do need 2 scanners one of which is controlled by a computer and one for the data channel. Also need 2 com ports available and a data slicer. Go to http://web2.airmail.net/lblant1/dfw/digital.htm and you will find what you need.

New web site is now up and running. List your used scanners here for the most exposure.

Because this is a new site the first 15 posts will be free of charge. Regular charge is $5 for 4 weeks.

Why post on this web site? Your ad will be viewed by more people and be available to all all day long for 4 weeks. Plus the site is for used scanners, so people looking can compare pricMike
mawood@net-link.net

Try the site, it just might work for you.

The Virginia State Police use only a few frequencies, but use a technology known as P/L. I do not understand the technology, but I have a Radio Shack portable scanner. Can any portable scanners receive transmissions using P/L technology? I enter the frequency into the scanner and only receive bits and pieces of transmissions...

thanks
siemer@umbc.edu

Try searching around 163 mhz. That's where the most traffic is, but there
is also action on 165 and 170mhz.
Where are you listening from?

Good luck and hppay scanning.

>Message-id:

>The Virginia State Police use only a few frequencies, but use a
>technology known as P/L.

As simply as I can put it: PL tones enable say, two different police departments to use same the same freq and allow each dept to listen to only members of its own dept and not the other. Suppose if both use 482.3375 Mhz; and Dept A uses a PL tone of 203.5 and Dept B uses a PL tone of 131.8 Members of A can talk to each other without having to hear Dept B (even though both are using the same freq); and vice versa.

I do not understand the technology, but I have a Radio Shack portable scanner. Can any portable canners receive transmissions using P/L technology?

Yes, the Relm HS200 is (I think) the only handheld that can be programmed with PL tones. You have to enter the freq, along with the PL tone for the police department(s) that you want to listen to.

> I enter the frequency into the scanner and only receive bits and pieces of transmissions...

Entering PL tones probably is not going to solve that. Assuming you are hearing bits or transmissions of the police dept that you want to follow, then you have to do a bit of other legwork. Some things you might try are: entering the freq(s) that you listen to most in priority mode (many scanners allow you to designate at least one channel a priority channel and whenever that channel comes alive, the scanner hops over to it); it maybe that your squelch is too high causing you to drop weaker transmissions; you may need a better antenna (try the Radio Shack $10 whip).

You don't say, but if you are hearing an obnoxious bracckkk noise at the end of each transmission, then you are listening to a trunked radio system. If that's so, you might want to explore getting a Truck Tracker radio. It will only follow Motorola trunked radio systems (not all police systems use it).

Unfortunately Radio Shack scanners are prone to receiving unwanted strong frequencies (I have a PRO-39 that just loves to tune in on the amateur freqs!) in the VHF-high range. Try tuning to a sideband about 15 khz away from the actual frequency. Sometimes this blocks the interference, sometimes it doesn't.

Hope this helps!

The audio is great for a handheld. The audio from a Pro-26 is no
better.
Of course the standard improvents (bigger speaker or amplifier and
bigger
speaker) will improve the audio quality tremendously.

460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

From: inigo@montoya.net
Message-ID: <3549621d.4269240@news.swbell.net>
Source record: 162842

>Would you (or anyone else reading) be willing to post your spreadsheets? I'm
>sure a lot of people would appreciate the jump start.

If you have Excel and a browser, there are pages where you can get the FCC databases. For most states, they're 2-3 Megs in size. I have found that they require some sorting and moving, but as far as I can tell, they're a pretty much complete list of all the licensees in the area. With something like that, you could then break it down into separate pages such as Fire, Police, Ambulance.

Something like that would be helpful if you live in a fairly large metropolitan area and you hear of some action in another community. You can then switch to that community's page and find the appropriate frequencies.

The only problem is, you're dealing in most cases with THOUSANDS of frequencies. It would be really helpful in that case to export those frequencies to your computer-controlled scanner so you don't have to print out then punch in the frequencies, by which time the action is over.

I've seen several methods for organizing frequencies. Either they're not what I'm looking for, or the method of organizing is very vague. Give me someone who lives in an area where there is a large city with five or six large suburbs. Do they organize by area, frequency, service?

I just bought these, so I have a little experience with this

>1) Does the AR8000 need a modification to connect to the Scout? If it does,
>can the AR8000 be
>purchased in the US with the modification for the scout done?
>

no - when you buy the Scout, you can get an adapter cable for it

>2) If I must purchase the AR8000 from Europe, how can I get it cell blocked?
>(Have no interest in Cell and
>want no problems with Customs confiscation after I have spent my money).

no need to buy in Europe if you don't want cellular - lots of places
here sell it - Grove is one. The cell-blocked US ver is called the
8000B
>
>3) Are there any US based companies which service the AR8000? (I saw a
>webpage by a US retailer which does not
> repair the radio anymore because of no manufacturer support- I am
>concerned about this).
>
I've never heard of service being a problem.

>4) I suspect that the term "near field" means signals which originate within
>500 feet +/-. Can the Scout receive signals
>from farther distances much like the scanner does and still do the reaction
>tuning?

I was a bit disappointed that I wasn't getting signals on the Scout,
so I called Opto this AM & was told near field means 10-30' from a
handheld and maybe 100' from a mobile & maybe some more from a base,
depending on power.
>
>
>I am also considering the R10 and Alinco, but I heard that they are slow
>scanners. I might look into them
>if the responses to the above questions are unfavorable to the AR8000.
>

I compared tehm, too, and decided on the broad support, accessories,
software, etc available for the AR8000

Good luck with it.

foul language on the newsgoups!

2439. Re: EDACS & trunk tracker

Newsgroup: rec.radio.scanner
Date: 1998-04-22 00:00:00 UTC
From: hazmat910@aol.com
Message-ID: <1998042203443300.XAA20003@ladder01.news.aol.com>
Source record: 162846

News Flash To Everyone:
The current generation of Trunk Trackers will ONLY track Motorolla Type 1 and 2 Analog systems. They will NOT follow GE/EDACS, Johnson LTR or Kenwood systems. They will NOT unDigitalize digital Motorolla and they will NOT Trunk Track and freq. range other than 800 MHz.

If you are willing to hook up to a PC, it is possible to do much of the above listed exclusions. The needed software can be found in various scanner magizines and on the WWW. Some of the software is free and some of it is very expensive.

John

Source record: 162850

Unfortunely there's not all that much you can do about the weather stations interferring with the railroad freq's. I had the same problem with my ar1500. You can try a less sensitive antenna or repositioning it. I found by laying the scanner down it would do better, sometimes. The ar1500 has a local/Dx switch but is worthless in the local mode. Had the same problem with cell phones. These plastic cases they're using now offer no insulation from external signals. If you need freq's you can check out my homepage @:

http://home.att.net/~tom.carlyon/scan.htm

Don't get too discourged. If the freq's aren't too active just lock them out. And you can always try wrapping the radio in aluminmun foil.

Jamie:

I had the exact same problem. Here's what I did: It sure was ugly, but
I was young and stupid. I opened the unit, and replaced the plug with
two wires which dangled out of the scanner. I just connected the wired
to 12vdc for charging/running. If I did it over again, I'd probably try
to find a jack that fit by searching Mouser catalog, etc...

Good Luck,

Chris

>
Hi from down under.I have owned a scout 40 now for nearly 12 months
and have found that the range it picks up depends on a few different
factors,such as the type of antenna you use and the power of the
transmission you are picking up(or trying to capture).The bets bet to
extend the range is to use hiogher gain antenna's on the scout for the
band you intent to try and capture.The reason you got short range out
of the tandy model is probably because you were trying to pick up HF
frequencies with an antenna designed for either VHF or UHF bands.And
also the low power of a hand held CB wouldn't have helped.
I find those factors all effect the range the scout picks up.I have
no problem picking up my local police repeater with a UHF antenna at a
range of just over half a kilometer,and thats from within my car.
Hope this helps you.The scout really is an amazing piece of
equipment.
Regards Dave

Dunno the freq counter operations, but I bought a DTMF decoder couple
months back.

In cheap pager type case, Bad battery connector, unit never worked
well out of box. Piece of solder fell out of case while messing with
battery during tech support phone call. worked with it 2 days and
found it to be cheap built and buggy.

Company official gave me line of bull, talking down like typical
sales droid "your too stupid to operate it" type crap.
Turned out to be Head honcho. Kevin Cox.

Dude didn't read my whole message and assumed he knew more about the
problem than me.

Personal opinion, stay away from Techtoyz. They are built CHEAP.

If you gotta buy counter, get one of the better units. I have the top
line model hand held counter since '91 and find it to be much better
built. And works as advertised.

Good signals... LCM

The scum-of-the-earth Mackey skulked and blathered more lies and fabrications than any human alive:

>
>All you ever do is post bitching & cojmplaining posts constantly
>belly-aching.

Naw, Johnnie, the only bitching and complaining that I really do is about what a lying dirt bag you are. My main mission in life is to strip you bare of all artifice and pretense. I know that you and those little kiddies in your care often cavort around naked but I mean in the metaphoric sense, of course.

>We never see you post on-topic to this NG.

Yeah,, like ever posting on topic is something that you have ever done? When did you do that you filthy liar? Was that when you were using a variety of aliases? Or was that when you were engaging in forgery? Did you perchance issue a rogue cancel against one of your own posts?

You challeneged everyone else to stop the falmes and redeem outselves. Obviously, you are referring to everyone else since you continue to posts dozens and dozens of off-topic posts every day.

Johnnie, you want it to stop? Then stop. You won't you like getting flames since it is all of the attention that you get.

> Mike@aa2hs.com

Mike, this may be possible with some scanners - but it isn't going to be
a 15 minute solder hack. You will have to be able to extract the data
from the display of the radio first. This could be serial data,
parallel data or could be riding on the data bus of the unit. It could
also be completely inaccessible. If you can get this data you will then
have to do some processing to get it into a format that the pixelboard
can understand. This would call for some processing to be sure as well
as knowledge of the data input to the board.

Are you sure you wanna do this? 8-)

Cheers!

This message is for all people who have tried to access my site in past couple of days.

The company that supplied my counter (Rapidaccess.com) took another big server crash! Because of this, the page would hang up upon loading. We have decided to settle this matter and replace it with a new counter. This counter I know is very reliable. Sorry for any problems this may have caused.

If you've not had the oportunity to browse throught the site, please feel free to do so. If you have any suggestions, comments, or anything for that matter, please feel free to drop me an email.

My webpage URL is --->http://kc8caj.dyn.ml.org
My Email is --------->kc8caj@hotmail.com

Thanks and 73
Chris, KC8CAJ

Hi, I'm off to Disney in Orlando on May 1st for a week, and I'm bringing my Yaesu FT50. I'd like to program in the active 2 meter, and 440 ham repeaters. I'd also like to program in some of the more active and interesting park frequencys. I have a list of hundreds, but I'm sure that within those there are some good ones....anyone have any ideas for me?
Thanks
Jim

2480. Info on new Sony scanner?

Hi all,

Apart from the page at Grove, does anyone have other links for info on Sony's new scanner (SC 18, I believe). The little data at Grove has made me curious (especially about the computer interface). Is it available yet, and if so, is there someone out there with hands-on experience?

Thanks,

Tim

2482. AR8000 antenna connection repair?

Newsgroup: rec.radio.scanner
Date: 1998-04-23 00:00:00 UTC
From: dmbach@mtu.edu
Message-ID: <6ho71bin1@dolphin2.me>
Source record: 162580
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The BNC connector on my AR8000 kept coming loose, and finally, the connections broke from the circuit board. I talked to EDCO, but they said there would probably be a 6-8 week delay. I was wondering how hard it would be to do myself, and if I could do it? It looks like the ground tab (?) just needs to be resoldered, and then I need a new connection from the center of the BNC connection to the circuit board. What is the white insulator looking thing that connects the center of the BNC to the circuit board, and where can I get one to replace the broken one? Thank you for your help.

The fact you blew off is that the salesperson will get docked about $10 comission. No big deal, you're right. It didn't seem to be something to cheer about, that's all. One man's lucky find is another's kick in the pants. Just irony, Mike.

I purchased what I thought was a new Pro-26 from RS.
When I took it apart there was jumper wires all over the place.
Some MORON must have tried to do that welfare jumperwire
cellular mod or something stupid . Instead of doing it the right way
and do a CPU swap (not skilled enough with a soldering iron I guess)
anyway I had to take it back and get another one.I guess this MORON
did the same thing you did. Bought it, hacked it, fucked it up.
Just my opinion,
Eddie

Just acquired a used Kenwood TM-231A 2 meter rig without a manual.
Anyone have one they could copy and send me ? Will gladly pay ALL
copying and postage fees. If not the entire manual then at least the
operational pages that shows what all the functions are, how to load
memories, tones, CTCSS, and just the general operation of the unit.
ANY help appreciated ASAP. Please email me.

Good question..I wish I could give up on this one but I am too darn close even for me a complete ignorant..I started last July ..my first exposure was to a LED in a bar that gave news, sports news and entertainment news to a 3" by 5" sign via a pager..Instantly I could see me exchanging my pager which has my email forwarded to it, substituted for what ever pager is on the sign,,sounds simple but it is not..thus far it has been a long road with tight lip sign service salesmen and tight lip tech. Theories rumors and chips from Alpha Alert through EZ95 with a push to by a 2000 software pkg. called SMART ALEC..fueling me along the way are very encouraging folks that are in the know as it were..should be simple..a pager with a data port out..a host device (LED SIGN) that monitors rs232 ..should be simple..I load my freq. and 4 capcodes and I should get my email at the sign..thing is as human nature goes..no one that sells news and sports news services want to tell me how to get those services some where else or that will allow me into the terminal..should be simple though..btw these signs are absolutely fascinating in how they work.. I know that a great source of service and inf. can be found at HTTP://WWW.KATSOURCE.COM Randy runs the place and is interested in user friendly applications for the signs..he has signs and services and personal tech support that is hands down interested.. Anyway..I have heard it said that winners never quit ..ect ..anyway if your are interested in this project or have knowledge I would surly be glad to help you understand what I have been able to gleen..

2505. Thoughts on PRO 90 Battery Pack

Newsgroup: rec.radio.scanner
Date: 1998-04-23 00:00:00 UTC
From: sokratys@earthlink.net
Message-ID: <353e8f89.693697@news.earthlink.net>
Source record: 162617
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Is this the same battery pack that is in the Bearcat 235XLT? I assume it is....

anyway

The battery pack itself says that it is rated at 800 mAh and it is a Nickel Cadmium type battery.

The thought is - what if you were to make a battery pack, using the new NiMH AA batteries (1400 mAh !) that radio shack has (assuming you could find another of those little pigtail connectors to connect the battery to the scanner)?

Would the built in regulator for charging the battery properly keep up with the NiMH batteries?

Any thoughts / concerns with this type of modification?

-walker

2506. Needed: Frequencies for Austin, Travis Co., and Williamson Co. TX

Newsgroup: rec.radio.scanner

2508. Thoughts on MS200(relm)..?

Newsgroup: rec.radio.scanner
Date: 1998-04-23 00:00:00 UTC
From: cabletek73@aol.com
Message-ID: <1998042302150200.WAA08204@ladder01.news.aol.com>
Source record: 162620

Any further on the performance of the MS200 mobile scanner by relm? Early reports were that it suffered from intermod and such, do the newer factory models have this problem? Looks like a nice simple unit, without all the bells of the 9000.

2509. Reccomendations for high performance mobile antenna?

Newsgroup: rec.radio.scanner
Date: 1998-04-23 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <35419896.4870353@news.newsguy.com>
Source record: 162621

Hello- I was wondering if anyone had ideas of what a good mobile antenna would be for listening to VHF HI/LO, UHF, and 800MHZ. I don't care if its long, etc. (I have antennas 3-4 feet tall on the car already, looks are unimportant.) The antenna will be used on an Icom R100. If anyone has tricks for this unit, pass them along as well.

Post and mail suggestions!

Thanks a ton to those who take the time to respond.

-Mike

2510. Need Feedback on the RELM MS-200

2526. Pro-64 Sensitivity

Newsgroup: rec.radio.scanner
Date: 1998-04-23 00:00:00 UTC
From: Truth@Beauty.Com
Message-ID: <353ebc79.10340831@nntp.a001.sprintmail.com>
Source record: 162638

My recently-acquired Pro-64 does not receive any AM or FM broadcasts (even a weather channel). Everything else (memory, channel storage) appears to work fine, and a check of the schematic revealed only rudimentary troubleshooting tips to improve the sensitivity. I've checked the obvious things (broken wires, bad solder joins, fried components, antenna, etc.) with no joy.

Has anyone had problems with this scanner's sensitivity? If so, how did you improve it?

Thanks,

TRUTH

They're Trunked in the San Francisco / San Jose Bay Area.

The following were forward to be by <edt@accesscom.com>
a few days ago:

District 4 North System Talk Groups

112 North Bay Maintenance A
144 North Bay Maintenance B
400 Bridge Maintenance, North
368 Bridge Tow Service, North
432 Construction, North
464 Bridge Structural Crews, North
592 Bridge Paint Crews, North
688 Electrical A, North
720 Electrical B, North
752 Electrical Special, North
816 Shop 4, North
944 Traffic Operation A, North
976 Traffic Operation B, North
1104 Oaklnad East Bay, North
1136 Auxillary A, North
1168 Contra Costa Maintenance, North

District 4 South System Talk Group

112 San Francisco Maintenance A
144 San Francisco Maintenance B
304 South Bay Maintenance A
336 South Bay Maintenance B
368 East Bay Maintenance A
432 East Bay Maintenance B
496 Penininsula Maintenance A
528 Penininsula Maintenance B
624 Construction South
656 San Mateo Bridge Maintenance
752 Bridge Structural Crews, South
784 Bridge Paint Crews, South
816 Bridge Tow Service, South
848 Bridge Maintenance, South

944 Electrical A, South
976 Electrical B, South
1008 Electrical Special, South
1072 Shop 4, South
1200 Traffic Operations A, South
1232 Traffic Operations B, South
1360 East Bay Maintenance, South
1392 Auxillary A, South
1424 Auxillary B, South

They also operate on the following Frequencies in the Bay Area:

856.7625
856.7375
857.7625
857.9875
858.7625
858.9875
859.7250
859.9875
860.7625
860.9875

You didn't answer his question. You did react like a small child during a tantrum, but no answer.

> All you ever do is post bitching & cojmplaining posts constantly
> belly-aching.
> We never see you post on-topic to this NG.

We? What is this we stuff? BTW, I have seen numerous posts by Mr. Alexander that were not only on topic but they were quite helpful. Time to get your eyes checked TIM. You on the other hand rarely post anything on topic. The rare time or two your subject matter changed from Cheek and slipped in to the realm of scanners, turned out to be quite lame.

> PLEASE help us in ending the flames on this NG & redeem yourself.

Why would he need to redeem himself. He doesn't hold the record for the most off topic posts in a month on this NG. You do with 345+. He doesn't have 3-5 different people telling him to "shut the f*ck up" everyday. You do.

2532. Pro 2039 mods?

Does anyone have emerg freqs (police/fire/ems) for the following
counties:

Frontenac
Hastings
Lanark
Leeds/Grenville
Lennox/Addingtion
Ottawa/Carlton
Prescott
Prince Edward
Renfrew
Stormont/Dundas/Glengarry

Are there any web sites that may have these freqs

I have checked out http://www.members.home.com/ontscan/ but there is
very limited stuff for this area.

Any help that could be given would be great appreciated

Please reply by email to dbristow@wwonline.com

2540. Help W/ POCSAG Decoding

Newsgroup: rec.radio.scanner
Date: 1998-04-24 00:00:00 UTC
From: kc6sde@pipeline.com
Message-ID: <3540d8d6.857824935@news.pipeline.com>
Source record: 162454

I have a few questions here about POCSAG decoding.....
If I use POC 32 How do I feed the signal into my sound card???
what type of interface between scanner and computer is required if
any??
Im sure the answer is in the supplied material but IT IS IN GERMAN!!
Will the quick and dirty decode MDT???
Is there any difference between using the 741 op amp and the 2n4401
transistor performance wise?

Does anyonme have any success decoding w/o using the discriminator?
If so whats radio and schmatic...
I.E. whats the easiest way to get going.. I've seen about a half
dozen schematics and I have got atleast four different shareware
programs....
help!
I am new to this whole thing but very excited... please help in any
way....

Stephen

I'm still digging through some freq.'s, but here are some to scan:

Freq(s) Callsign

465.275 KNFY409 (not listed but I'd also try the pair, 460.275)
Ch 1 460.075 KEB501
Ch 2 460.450 KEB501
Ch 3 460.400 KEB501
Ch 4 460.200 KEB501
155.730 KNCE504
155.970 WGZ719
424.1750/429.1750 WNWV932
424.1500/429.1500, 424.2000/429.2000 WNKN564
460.0500 WNDE794
460.3000/465.3000 KNFU213

Of course, most of these freq.s are used in more than one area of the county.

- mike

NOTE: Change the moc to com to email me.

allsafe,

Anyhoo, you get the gist of what he did,
but I can't figure out how he did some of things this article describes.

I'll try to explain...

Halstead figured out how to tap into the telephone system's memory
so that his harassing calls would continue automatically. Some of his
neighbors received up to 40 messages a night.
----
this is simple if you have a tape player and a tranceiver(? some type of
short range broadcasting device) with a line in.... just loop the tape and
have it broadcast continually.

Halstead also discovered telephone codes that allowed him to replace
message machine greetings with raunchy substitutes.

This is also farily basic...all you need is a DTMF (dual tone multi
frquency, phone digit frquency) decoder...then just wait for someone to
check their messages and boom! you got their voicemail access codez.

He learned his neighbor's phone numbers by eavesdropping, and the
harassment began.

Listen to any given person's fone calls long enuff, and you're bound to get
the originating fone number right from "the horses mouth" so to speak.

"How he got into the mailboxes, I don't think anyone has an idea how
he did that," Stolle said. "I know Bell Atlantic could not figure out
how he did it."
----
see above...bell atlantic must have some _extremely_ stupid people working
for them... fone company employeez r lame.

"When I asked him how far in the future he did this, he said the
calls would go on for a long time," said Detective J.R. Legg, the
Virginia Beach police officer who investigated the case.
----
this guy must have the biggest balls in the northwest.... shyte.

I've tried to answer all points of the message, but if i've missed something
I'd be glad to explain it in more detail.

Not Mr. Halstead,
Unknown.

John, My first thought would be to scan all frequencies conventionally and see how many control channels pop up. This might tell you if they are splitting up the frequencies into distinct systems. Try running the "Trunker" program available on the net set to one of the control channels to get the channel assignments.

Regards

Ed

OOps sorry, I was wrong I thought you meant the ones for sale at some stores didn't read enough to see you meant the ones the employees are using. If the PTT button is on the front and they have a black rubber grip along the outside and rounded at the bottom then they are the TalkAbout radios. The onesd the employees actually use are probably one of the Spirit or low end Radius models I have seen both at different Wal marts here in Phoenix they are typically on 151.625 at least around here they are.

I have an AOR AR-950 100 channel programmable communications receiver
for sale. This is an "unblocked" radio which was manufactured and
purchased just before the ban on radio receivers which cover full
800-900 Mhz.

Features include:
100 Channels in 5 banks of 20
AM/FM selectable modes
Scan/Delay/Search functions
DX/Local attenuator switch
This is a "mobile/base" scanner, not hand held.
Excellent RX sensitivity, especially 800 Mhz band.

Freq coverage:
==============
29-54 VHF-lo
118-136 AIR
138-174 VHF-hi
408-512 UHF and T-band
806-950 Cellular Phone, Trunked, Conventional 800 etc
===============
The radio has selectable steps - 5/12.5/25/30 Khz stepping.

Included is the original box, manual, styrophoam, mobile bracket,
DC wall power supply, auto power cord, 2 antennas, and radio.

Cosmetic condition is 8 to 9 out of 10. Only light scratches are
where the radio connects to the mounting bracket.

Electrical condition is 10 out of 10. This receiver is far more
sensitive and selective than my PRO-46, especially 800 Mhz band.
Original price from ACE $329. Asking $175 and I'll pay shipping.
Reason for sale: have an AR-3000 and dont need to receivers. This
one is seldomly used now.

Email if interested. References available.

I've had an 895 for about a month and control it with both FreeTracker and Radio Manager for Windows. I love this radio. It performs well both in Trunk Tracking mode and as a standard scanner. The prices are really dropping so shop around the net for good bargains. Also, if you plan to interface with your PC, make your own cable. It only takes a few minutes. If you can't make a cable, I believe that the people who market ScanCat sell a cable.

Regards,
John Hawkins

Rich-
You may be in luck. Most triple conversion scanners that you
will happen to come across will have the cellular freq ranges blocked.
Therefore you probably won't even come across them to begin with. Just
stay clear of any mods and you won't have much to worry about.

Wiggie

Linda,
Very likely, these are business bands. A license is required to use these radios.
I purchased a few of the family radios from www.CyberGadgets.com. I actually bought the Kenwood Freetalk in a yellow color. It is a great radio and goes roughly 2 miles. I have been very happy with it.

The webpage will at least show you what some of these radios look like.

Hope this helps!

>The recently passed law makes it illegal to listen to cell phones.

What law are you refering to? The Electronic Communication Privacy Act? That law has been in effect for many years.

>I would like to know the cell phone frequency range on a triple conversion scanner...

The cell phone frequency range on a triple conversion scanner is the same as one on dual conversion scanner. All scanners since the early 90's have this range blocked and since your fortunate enough to have a triple conversion model then you won't have to worry about accidentally hearing an image of an unwanted cellular transmissions.

...so I can avoid listening to illegal transmissions. :)

And since when are cellular transmissions illegal? I use my cellular phone everyday and no one told me that it was illegal for me to transmit on my cellular phone. In fact the store I bought it from told me I could transmit all I wanted on the weekends.

Hi Joe,

Alexandria City is currently using the Motorola Smartnet Type IIi
System. Most are Type I units, except for fire apparatus which
is Type II.

Fire dispatch is simulcast on 855.5125.

Hope this helps

I've heard that the Blue Channel is now allocated to 39.14 in
the San Diego & Riverside area. But haven't been able to
confirm this for the San Francisco / San Jose Bay area yet.

These are the CHP Color frequencies that I'm currently
aware of:

Color Base Mobile

Amber 42.08 42.82
Aqua 42.62 42.84
Black 42.46 42.70
Blue 42.34 42.18
Brass 42.92 42.62
Bronze 42.12 42.40
Brown 42.50 42.82
Copper 42.60 42.74
Emerald 42.88 42.20
Gold 42.12 42.20
Grape 42.42 42.66
Gray 42.48 42.68
Green 42.54 42.24
Iron 42.08 42.76
Maroon 42.92 42.74
Orange 42.88 42.66
Pink 42.44 42.76
Purple 42.40 42.16
Red 42.44 42.28
Ruby 42.50 42.28
Silver 42.08 42.28
Tan 42.42 42.84
Turquoise 42.60 42.02
Violet 42.16 42.64
White 42.56 42.72
Yellow 42.52 42.30

Source record: 162515

how about group ID numbers like 400-2, 500-3, etc. These are much easier for the trunk tracker to stay locked on a specific channel (not frequency) to follow conversations. With the other type (4534, 421, etc), you must continuously scan becasue a specific channel can consist of more than one of these type ID numbers. Get with it people!!

Hello,

I have one of the Uniden SC-150Y scanners and I'm having trouble charging the battery. The battery is fine, but it appears the center post of the charging jack has come loose slightly. Has anyone else had this to happen? If so how did you fix it? If anyone knows where I can find a replacement jack please send me the part number and location. I would prefer to replace it myself or have it done locally instead of paying Uniden $49.50 + S/H they want to repair it. Please respond through email when possible (jhurst@vt.edu).

Thank you,
Jamie

Most likely Spirits, which are available on a number of VHF or UHF
frequencies. Spirits were made available in Yellow.

Most likely not. Those "TALKABOUT" radios use standard AA batteries,
not rechargeables, (Unless you use a outboard charger, and
individually charge the batteries) which would make them difficult
for WalMart to use. They most likely are Spirit Motorola portables,
which were available in Yellow.

>1) Does the AR8000 need a modification to connect to the Scout? If it
does,
>can the AR8000 be
>purchased in the US with the modification for the scout done?

Yes, the AR8000 definitely needs a mod. It is easy to do, and the diagrams
are in the Scout manual.

<snip Q.2>
<snip Q.3>

>4) I suspect that the term "near field" means signals which originate
within
>500 feet +/-. Can the Scout receive signals
>from farther distances much like the scanner does and still do the reaction
>tuning?

The Scout does reaction tuning on whatever frequency it finds, near or far.
The trick is getting it to find the frequencies you want.

"Near Field" is a term used to describe the much stronger signal detected
close to the transmitter. The edge of the near field varies depending on
the power and frequency of the signal. As a non-transmitting person, you
are probably never in the near field of any transmitter. Maybe someone else
can provide the near field distances of cordless and cellular phones? I
suspect they are significantly less than one foot.

The Scout picks up signals that poke through the RF floor. Your best bet
for detecting signals at a distance is to know the approximate frequency
being transmitted, and then to use an appropriate antenna for higher gain on
that band. A directional antenna tuned for the approximate frequency you
are looking for would be best.

An example of signals that the Scout will easily pick up in the far field
are commercial radio broadcasts. Whatever frequency counter you get, I
would suggest getting a notch filter for 88-108 MHz. That will
significantly lower the RF floor for the signals that pass the filter.

>I am also considering the R10 and Alinco, but I heard that they are slow
>scanners. I might look into them
>if the responses to the above questions are unfavorable to the AR8000.

The AR8000 is a slow scanner as well. It scans at a rate of 30 channels a
second. There are ways to speed up the scan rate, but at the cost of
sensitivity. I got mine up to around 80 channels a second, but it was
skipping transmissions on some bands.

I actually don't mind it THAT much so I wouldn't characterize
it as "horrible". One of those personal things I guess. I use
a number of control programs and the iCOM is far from being in
last place as far as ergonomics go.

Could it be improved? Oh yeah. But most of the problems I have
with it are in terms of how things are implemented...or should
I say not implemented. Like only having 20 user-defined
frequency ranges for auto-step/mode. Only being able to scan
one bank at a time. These can be fixed with the software while
leaving the interface alone. Let's see what the next version
will do...

And it is rather power-hungry. It will run on a lower-end
x486 but plan on being frustrated. Especially with that dang
database editor window. Bringing that thing up at near
physical screen size is a real pain...it must do about five
separate updates(with the accompanying flashing) before it's
happy.

The fact that it won't run on my latest Pentium Windows
95 machine pisses me off to no end...lucky for use we
now have other vendors to buy control programs from.

Source record: 162550

Hello everyone, and IC-R10 owners in particular,

Please visit

http://www.xs4all.nl/~jstuyven/r10

If you would like to 'register' your IC-R10 as being yours (which may prevent it from being sold when it is stolen from you), send me an email with ONLY your serial number, name, and country. Note: this information will NOT be used for any commercial activities (and I will not add your email address unless you explicitly want me to). I simply thought it would be fun to see the different serial numbers appear in different countries in the world. I'm quite curious about where in the world this scanner is being used; possibly you are too.

Anyway, I'm still collecting as much information as possible about this scanner (currently working on a page about the protocol that is being used during data cloning; to arrive soon on my pages), so I would appreciate any information.

Thanks in advance, and good luck with the IC-R10,

Joost van Stuyvenberg
Amsterdam, The Netherlands

According to Bob Kelty's book it's 484/487.2125.

482/485.3375 is the Santa Clara County "MACS" channel. This is the
T-Band equivalent to CLEMARS in Santa Clara County. San Jose can patch
through at 460.0250, City of Santa Clara can patch through on thier talk
group 1200. Sheriff can patch through on 154.9200 MHz.

Which book do you have?

Agreed on the FM antenna splitter. It did an OK job when I was living in an urban area (hell... cured some serious intermod problems), but once you hit the 'burbs and sticks, forget it... FM stereo and scanner reception suffered greatly.

I was tempted to buy an on-glass cellular look-alike scanner antenna from RS, but I decided to cough up the extra 10 bucks for the on-glass dual-band 2m/70cm ham antenna they sell for $40 USD. It looks like an overgrown cellular antenna, but most people won't know the difference. There is very little low-band activity around here (everything is in the 155 and 460 MBz range), so it would be a natural choice for me. I'll have to admit... this antenna works very well - I was quite impressed with its performance. Well worth the $$$ spent, and it looks quite decent on my car (new Taurus).

> I realize there is a tradeoff here: reception for "stealth." But I'd like to

Scanners and two-way radios don't have much street value when stolen (I have the slant-face RELM and Regency radios in my car - not the most asthetically pleasing radios). I'd be more worried if I had an expensive stereo installation and a new Star-Tac cell phone sitting on the front seat.

Hi! I was wondering if anyone has any information on opening up the Bearcat BCT-7 scanner to cover 50-54 MHz (the 6M amateur band)? It covers 30-50 MHz out of the box, but will not tune above 50 MHz as-is.

Believe it or not, I'm not interested in cellular mods for it! :^)

Thanks and 73,

> John Habbinga KC5ZRQ

John,
The channel indicator in Trunking mode shows you the current channel (i.e.
the frequency you stored in that channel) the talkgroup you are listening to
is currently using. When the Trunked system is inactive the scanner parks on
the channel number the radio is receiving the data signal on and flashes that
channel number without sending the audio to the speaker.

73's and Happy Trunking,
Dave K9DV

You could also use a neon lamp inside a piece of plastic tubing for this application. Assuming this is going to be for CB use this should work.

2659. Information on ball park frequencies for Turner Field, Atlanta, GA

Newsgroup: rec.radio.scanner
Date: 1998-04-25 00:00:00 UTC
From: ccreeper@inetnow.net
Message-ID: <35446e44.32165912@news.newsguy.com>
Source record: 162393
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just returned from my latest visit to Turner Field, home of the Atlanta Braves. After doing some exhaustive searches for existing information on frequencies in use by the personnel at the park, I was unable to find anything. So, scanner in hand, I went to the game on Friday. All of the personnel carry around Motorola MTS-2000 radios, with what looked like 800/900 mhz antennas, so it looked like we were dealing with a trunked system. Because I don't have a frequency counter, I had to snoop the hard way. I started searching on the low end of the 800 band, all the way up to the high end around 869mhz. Nothing new popped up that would have been a localized transmission, or ball park related. Satisfied that the frequencies were elsewhere, I moved up to the 894+ mhz area, then started catching what I believe to be mobile-side transmissions on their trunked system hopping around, all sorts of talk of food needing to be transported to such and such box, and some security talk. Clearly, these were the transmissions I was looking for. I was only able to identify a few frequencies, as I did want to watch the game, hehe...here they are (with what would be the corresponding repeater side frequencies--which I cannot confirm):

901.150
898.150
897.5125

Assuming those are the inputs, the outputs should be:

940.150
937.150
936.5125

I was not able to locate the control channel. It looks like there are several more frequencies to be accounted for, at least a total of 2 more to make a five-channel system. If you are planning to head down to the stadium, considering bringing your hand-held, and help figure the rest out. Email me and share your info with the group. One caveat, if you have a double conversion scanner and plan to bring it, forget it. Intermod is terrible, I brought a triple conversion Uniden 235xlt with a specially tuned 800mhz antenna, and it was overcome at times (which is rare), I actually got the best results without the antenna, believe it or not. If you want additional information on my findings as well as the most complete, up-to-date information on the rest of the Atlanta-area trunked systems, visit my website at http://www.inetnow.net/~creeper/scanner.htm

2669. How to make radio antenna lamp?

Newsgroup: rec.radio.scanner
Date: 1998-04-25 00:00:00 UTC
From: VR@hempseed.com
Message-ID: <6hs24rfqb1@nnrp1.dejanews.com>
Source record: 162406
Cross-posted to: alt.phreaking,rec.radio.cb,rec.radio.scanner,rec.radio.amateur.equ

Is there anyone can tell me how to make a antenna lamp which could be driven by radio radiation,such as elctro-magnetic wave emitted by a mobile phone.The lamp is just attached to the antena.

A antenna lamp I have inspected is a one that consists of a diode liminary and a SMD(surface mounted) transisitor of the type MMBA811C6. And its circiut diagram is as the ACSI code bellow:

```
|(e)
-----------
| C6 |
-----------
(c)| |(b)
| |
| // |
--|>|--
(a red diode luminary)
```

But the transmitor C6(MMBA811C6) made by Motorola is no longer a routine production and could be got any more. Can anyone here tell me another cross which can be implemented here or tell me a new circuit.

Thank you. Please email to me.

Henry Har

dumb-ass, you OBVIOUSLY are NOT a touch-typist or have any typing skill. Otherwise, you would know that touch-typists DON'T have to look at the keyboard to hit each key & you would also know that "c" & "v" are right NEXT to each other on the keyboard so they would be very easy for a touch-typist to mistake the two keys.

How sad that a simple single typing error is what you need to be able to poke error & fun at someone.

NO, we DEFINATELY are NOT the SAME person!

I have used "usa.net" for my mail address for about 2 years, Glenn started using it a few months ago. We are using the same ISP, that being MCI. These facts are both coincidences. (Glenn changes ISP's frequently)

> So what gives here John/Glenn ??
> By the way, this is not a flame, I'm just beginning to wonder about
> you is all.

You could confirm that we are two different people by running our callsigns on the FCC database. Go to http:\\www.qrz.net, my callsign is KA0SSF & Glenn's is KB7PKC.

I am looking for a mobile scanner with the cell block installed or restored.
A Radio Shack or Uniden would be great, as they are usually much less expensive
than the Professional models. I would prefer to deal with a seller in person,
due to the nature of used radios, (and also a few rotten apples :-(.
I am in the central Massachusetts area, and would be willing to drive anywhere
in central New England to make the purchase.

Hi,

I ordered the 895 yesterday from the people in the link. I know
nothing about them, but they had a good price and shipped same day. I have
the UPS tracking number and am awaiting delivery. Be sure to get the coupon
for $75 off. That makes the total price 244.95 plus 18 shipping.

Let me know if you decide on them. I may be buying other equipment from
them if this one goes OK

Harley Jones

Source record: 162418

All I can say Ed is that in my area, th elocal police can be programmed as either Type 1 or 2 in my Pro-90 scanner. It's all in how I program my scanner. Maybe you're not so lucky in your area to use both types, I don't know. I simply set my scanner up to use a preset fleet map (Type 1) and wella!! Again, at first I was searching with the Type 2 mode and it also worked. Good luck!!

2682. Frequencies for FRS?

goodall@alaska.net asked:
> Just wondering if anyone has any wildlife frequencies that are known?
> Looking for tagged animal type of info.

Try 31.17 - 31.99
44.63 - 45.05
151.145 - 151.475
159.225 - 159.465
for low power (5mW avg / 100mW peak) wildlife tracking and telemetry. These
are specific for the Forestry-Conservation Radio Service, but out in the
wilderness experimeters are apt to use any telemetry / radiolocation freq.

John Bickel <jbickel@ix.netcom.com> asked:
> I'm trying to reduce a set of 34 licensed freqs to the sub-set actually
> in use in Lee County, FL for trunking. .... Any way to look at a set of
> licensed freqs and puzzle out the "bandplan"?

Take a look at the details of the licenses. A review of the Police Call entries for Lee County, FL shows the 800 MHz assignments break down as:

	(1a)	(1b)	(2)
854.	.9625		
855.	.4625	.7125	.9625
856.	.7125	.7375	.4625 .9875 .2125 .2375
857.	.4625	.7125	.7375 .9875 .2125 .2375
858.	.4625	.7125	.7375 .9875 .2125 .2375
859.	.4625	.7125	.7375 .9875 .2125 .2375
860.	.4625	.7125	.7375 .9875 .2125 .2375

Call Sign: WNRC465 WNRC465 WNMD426
Mobiles: 3000 3000 1000
Controls: 5 5 3
Repeaters: 2 - Ft. Myers 2 - Ft. Myers 2- Ft. Myers
1 - Cape Coral

Police Call marks group (1a) as a single trunk. With the addition of 856.4625 (for symmetry) you would have a 19 channel trunk. Group (1b) may be an extension of that trunk, MDT frequencies, or phone patch channels. Group (2) would appear to be a seperate system with 10 frequencies.

Assignments in the 856-860 MHz range tend to be symmetric where possible, but the 851-855 allocations are somewhat random. At a guess, you have two systems, (1a&b) and (2), with some of the group (1a) channels inactive. Check for the presence of control channels in each group for confirmation.

Plug group (2) into your TrunkTracker and confirm that you have a complete trunk (no missed replies, rational set of talkgroup IDs, etc). Plug all of group (1) in as another trunk and confirm it. If you've included extra frequencies (inactive, non-trunk, etc), the TT will ignore them. You can look at the Channel Activity Indicators to determine if any of the frequencies are never used.

Matt,

You might want to tell us what state. If it's NY, there's a fella who has a very extensive web page broken down by county, and then agencies...but I don't have the address. I'm sure someone will be kind enough to pass it along if it is NY State.

Eric in Central NY(State)

Source record: 162496

Hi,

Sony has not shipped any of their new hand-held scanners yet so it is too early to have had anyone with hands-on experience. There will be two models; one without computer interfacability called the SC1 and the other with computer interfacability called the SC1PC. The latter will allow the user to download directly from a CD ROM database which is supplied free and to manipulate the data base files. It will also allow one to program a Scan Pause Timer, change frequency steps, etc.
I will be posting something on it as soon as I receive my first shipment which is now scheduled for late May.

Message-ID: <1998042501395400.VAA15357@ladder03.news.aol.com>
Source record: 162497

Latest drop was Thursday :
PRO-2045 $129.95
PRO-67 $129.95
PRO-64 $149.95
PRO-2039 $99.95
PRO-2040 $119.95 or 129.95 (I think, I didn't write this one down)

If you don't see them in stock at your local store, they can check the sales district and have the in-stock units shipped to your local store. These may be displays but carry full warranty.
The DX-390 short wave is now $99.95
DX-394 is $199.95
These units were all in stock (some more than one unit!) at one store I checked.
You might want to check & see if you can grab these in your area before they are all gone, as prices will probably go up in the used market when they run out.
Happy hunting. The new models are showing up too. The "race" scanner is kinds cute (you can key frequencies to car numbers) and it includes an 800 mhz tiny duck antenna.There's also a cheaper (regular price) trunk tracker handheld.
End of free ad, I figured those in the market for bargains would want to know.

Neutrodyne

Mine works fine off the headphone jack. You need to open volume controls with WIN95 and be sure line is on and the vol. is up and check the scanner vol. is up about half and if the cable hooked to your scanner is mono or stereo(mine is stereo, but splits so you can run a scanner on each side) this could be problem but could move line in control to one side or other. E-Mail me if you still can't get to work.

When the Secret Service travels, do they use the same frequencies everywhere? I would assume they would, since they protect people when travelling around the world.

In any event, where can I find, or could someone please post, the Secret Service frequencies? If there are any special ones for the Boston, MA, area, those would be helpful, too.

Thanks much.

Radio Shack has the PRO 2045 on sale now for about $130.00.
Normally over priced at $350.00
It has Weather alert, triple conversion, CTCSS option, 200 channels.
I own three of them. At the $130.00 price, it is a great radio.

Thanks for the info. (A little too expensive for me - looking at something around $150)

Indeed. Did you note the change in his tone on his newly aquired ISP?

He's chomping at the bit to resume his normal MO. That loss of the
Sprint account must have hit his wallet hard. Now he's trying to sound
like "father knows best".

Mackey's been spanked. Again.

Since the price of this scanner has been reduced I am now selling
it for $160 NEW, with everything of course it comes with originally,
plus a copy of the unit's service manual too. I will pay for shipping.

2747. STRAW POLL (RFD): rec.radio.amateur.* "Vote of Confidence"

Newsgroup: rec.radio.scanner
Date: 1998-04-26 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i123b$491$1@newscene.newscene.com>
Source record: 162226
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap,news.groups

***** DON'T PANIC!!!! *****

***** READ ENTIRE MESSAGE FIRST!!!! *****

The following message is an announcement of a 30-day discussion period on news.groups to precede a non-binding opinion poll which, depending on the results, MAY lead to a formal Request for Discussion (RFD) to reorganize the rec.radio.amateur.* newsgroups. NO VOTES ARE BEING TAKEN AT THIS TIME, and any binding vote that affects the rec.radio.amateur.* newsgroups will not occur for many months into the future, if at all. Please read the entire announcement carefully before replying or following up.

rec.radio.amateur.* Vote of Confidence

Contents:

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others. What should I do?
Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which initiated the last major reorganization in 1993) is the point-of-contact for questions about this proposed opinion poll. Principal members are

Paul W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg member, Gary Coffman, KE4ZV, also endorses this proposed opinion poll. The proposed opinion poll will be conducted by an unbiased third party from the Usenet Volunteer Votetakers (UVV), Jeremy Billones (billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this proposed opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborous and time-consuming, and perhaps unnecessary), we propose to conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV) with an RFD and Call For Votes (CFV) period. During the RFD, we have discussion pro and con about each newsgroup and its charter. During the CFV, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I believe that this newsgroup's existence or its charter should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If the proposed opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, the proposed opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this proposed opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this proposed opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today
at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this proposed opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)

rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are principally used by readers of rec.radio.amateur.*, and their fates would substantially be decided by any significant reorganization of the rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.* reorganization, rec.radio.cb is not included in this proposed opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups (except for rec.radio.broadcasting and rec.radio.info, which are moderated). In addition, the following individuals were consulted prior to this announcement (note that consultation does not necessarily imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization, former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Express your opinions on news.groups (the default followup newsgroup for this message) and vote "YES" for all of the existing rec.radio.amateur.* newsgroups when the proposed opinion poll occurs (in 30 days time).

Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?

Express your opinions on news.groups, and vote "NO" for all (or all but one) of the newsgroups when the proposed opinion poll occurs.

Q: I support some of the newsgroups for amateur radio, but not others. What should I do?

Express your opinions on news.groups, vote "YES" for any newsgroups that you wish to remain unchanged, and vote "NO" for any newsgroup you wish to have reconsidered in a future RFD/CFV when the proposed opinion poll occurs.

Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?

Since the proposed opinion poll is for both the existence of given newsgroups AND their current charters, you should express your opinions on news.groups and vote "NO" for that newsgroup when the proposed opinion poll occurs. Again, this is a non-binding opinion poll simply to determine if current newsgroups should be considered for modification or deletion, not a vote to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by this proposed opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups on news.groups.

Q: I have no opinion, what should I do?

You may wish to read the following 30 days of public discussion on news.groups about this proposed opinion poll to develop your own opinions. Discussing your resulting opinions on news.groups may help further develop your opinions, or those of others.

If, after reading and participating in the public discussion, you still remain undecided, you may choose to abstain from the proposed opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups when the proposed opinion poll occurs.

Watch for an announcement of the STRAW POLL (CFV) in about 30 days. Questions to rra-wg@theporch.com.

Unless you are able to shell out big $$$ for a digital radio and have it programed on thier freq's you are pretty much out of luck. No add-on boards or Mods that I have heard of to monitor digital.

In that case it's probably a local or state law about mobile/portable scanner
use. Sherrif's officers tend to simplify when they can, and let the booking
people & courts sort out the details like legal chapter & verse.
```

From: "Eric F. Richards" <efricha@flatland.dimensional.com>
Message-ID: <6huf4l$4kt$1@quasar.dimensional.com>
Source record: 162265
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

Greetings, all...

The May issue of "Monitoring Times" has a back-page editorial by Bob Grove blasting the ARRL for taking credit for "saving" us from HR2359. He says (and I agree) that the ARRL is taking too much credit for a half-baked job, and continues on:

"The FCC is preparing to decertify amateur radio equipment that can be altered for extended frequency coverage."

and notes the ARRL silence on that.

My question is: Is the above statement true, or is it just "crying wolf?" I thought the Big Three got all up-in-arms about the original bill over that issue and it was "addressed." For example, does Yaesu even make an HT that wouldn't be decertified if that statement is true?

Does anyone have any solid facts on this issue?

Thanks much,

Eric, KB0YDN

I'm not sure about the Double Duck dual antennas, but you may
want to try an Austin Condor. It's a great antenna for the
VHF-low and VHF-high bands and also improves reception in UHF
and the 800 Mhz band.

> Probably CFR Title 47, Section 90.113
>
Title 47, PART 90.113 says "No radio transmitter shall be operated...".
In my "I'm not a lawyer" opinion, this prohibits the operation of a
transmitter, not the possession of a transmitter.

I would hire a lawyer familure with the Code Of Federal Regulations, who
is willing to go the Sheriff's Office and demand they provide proof of their
authority to inforce Federal Regulations, and demand the return of your
property.

If you can find the above referenced lawyer, he/she should also know that
CFR enforcement must be done by a Deputy U.S. Marshal, at the direction
of the U.S. Attorney, upon complaint of the F.C.C. field office.

However, on the other hand, if you operated a transmitter without "proper
authorization granted by the Commission", you're S.O.L.

Once again, I'm not a lawyer. The above is not to be construed as legal
advise. The last time I checked, I still had a right to freely express my
personal opinion.

In article <6htrvf$969@sjx-ixn2.ix.netcom.com>, Robert Snelgrove
<steelgtr@ix.netcom.com> writes

Hi,

You have a couple of options:-

>How do you get the cellular mod for a pro-26? I thought it couldn't be
>done.

1) Modify the unit so it receives the Cell "images" in the UHF part of
the spectrum. There were/are a couple of web sites but one is/was
http://www.n-link.com/~friendly/pro26cell.html

2) If you want to actually restore the frequencies "Blcoked" on a US
model so you can actually "key them in" then your only option is to
replace the main IC with the one used on the PRO-26 in Europe.

Hope that helps.

Cheers,

I am looking for a mobile scanner with the cell block installed or restored.
A Radio Shack or Uniden would be great, as they are usually much less expensive
than the Professional models. I would prefer to deal with a seller in person,
due to the nature of used radios, (and also a few rotten apples :-(.
I am in the central Massachusetts area, and would be willing to drive anywhere
in central New England to make the purchase.

The ARRL is also looking out for your interest in attempting to force "voluntary band plans" to be considered LAW under the GOOD PRACTICE statement.

In other words, if you don't follow the ARRL band plan for 2 meters, or 160, or the AM window, or the DX window - you could be sited as being in violation of FCC regulations.

We have too many rules and regulations as it is, and I certainly DO NOT have any desire to have the ARRL in charge of anything.

As with many organizations claiming to represent an entire hobby, worker group, manufacturing group, etc., the ARRL only truly represents themselves - all in the name of "the greater good" for all concerned.

When is the last time you saw the ARRL reach out and ask ALL hams what their thoughts were on the future of ham radio? What ALL hams want/need is being determined for them.

You could ask, there isn't any fine print on the reciept about clearance items......Most managers would rather take a small hit & keep you happy that to have to refund all your money (You could return it & then buy it at the current price anyway). Go in while you're still within 30 days and see!

Hi Brian,

The Blue Angels will be flying at Andrews AFB on May 16th & 17th.

I'm not sure about the "show control" frequency, but you should
be able to obtain it by listening to Andrews Tower or Ground.
The Tower will generally hand off to show control for each event.

Check out the following URL for Tower & Ground frequencies:

http://www.airnav.com/cgi-bin/airport-info?ADW

Check your state laws too. Allot of states have laws banning the use
of scanners while operating vehicles. The SO might have miss-quoted
themselves and actually meant a state law. But then again, didn't
the government try to pass something on scanners after a Florida
couple recorded a conversation of Newt Gingrich off their scanner
awhile back?

In another case of lost on the left, big brother came up with the IDEA of TYPE APPROVAL.

For you history buffs, the FCC is not that old. Remember when , as a USA citizen
under the wireless treaty of (around 1937) we, the people retained the right to receive
anything on the air waves.

And you might remember ,back in the 1960's, we used to take old army navy gear
and remake it to our needs.

The whole idea of type approval was not cause RF noise . In receivers the local osc would leak thru the antenna conection.

This was done by design in tv's approved in the UK, so the dreaded tv tax police
could see if you had paid your tax on your tv, by using Radio direction finding gear

What began as a way to not cause your neighbor rf noise, has become an well..... the mess we know today

Adding the coil and the whip on the top of the antenna improves the low vhf ban reception. Although I don't think it helps the higher UHF reception any. Tell the manager you need the coil and the whip assembly for the new discone. He looks it up in a book that has all of the parts listed for individual sale. (replacements for any broken items) The whip and the coil come to a grand total of $6. This leads me to wonder if you could special order the entire antenna one part at a time cheaper than buying it outright. It may be a possibility.

Who the hell do you think you are? You're not running this or any newsgroup. I will not do *anything* you request. I have no ill will against anyone on this NG except you.

Mackey, I sincerely think you're mentally disturbed. I hold you in utter contempt. You lack accountability, civility, and common sense. You have no concept of truth or responsibility.

You hide behind bogus addresses, have been associated with forged posts and cancels, and you have trouble holding a stable ISP.

I cannot wish enough hardship upon your existence.

I feel sympathy for your family and those who care about you. You're an embarrassment.

I sincerely hope you decide to take on the therapy those who are close to you have suggested. That's right, it's obvious that those close to you have been urging you to seek help for your anti-social tendencies. You're a delusional, angry, sick person. Locked in your basement, hunched over your keyboard, shaking your fist at the ceiling.

You will spend your final days locked away in a mental hospital. I only fear your final action, and possible loss of life that will occur when you finally snap that line between reality and delusion. I only hope that you take your own life as well.

2804. Re: FS: NEW R.S. PRO-2045 SCANNER / read-read-read!

Newsgroup: rec.radio.scanner

When I first posted the ad in these NGs, the 2045 was not available at $129.99. That's good news for everybody! I can still go back to R.S. and get back my $$$, or the difference, since it's been less than a month since I made the purchase, so I think I will do just that and keep using the two mint BC-9000XLTs I was also trying to sell last and this week in the scanner.groups. That way I won't "downgrade" my listening posts.

In the meantime, it's my absolute right to offer here NOT ONE, but TWO 2045s now for $160 shipped anywhere in the continental US where an unlucky hobbyist wasn't able to find that scanner, and badly wants one. Maybe a second unit (like I do w/ my 9000s) to program exactly the same memories, which will be placed in another key location of the house where you like to listen too regularly. In my case: the "shack", properly speaking, and my bedroom.

This is a relatively democratic society and I understand that "St. M." had/has a right to express his ideas, etc. Anyway, one of the roles and purposes of the NGs, I hope, is to help each other, to the point sometimes of helping finding the same equipment for less price when possible. On the other hand, sellers have to make some $$$, or nothing will get posted!

This was an "easy" one to water down, since there is nobody really at fault. This should calm down or terminate the thread, hopefully.

So...anybody wants a 2045 NEW for $160, shipped?! I got the only two left in the whole San Bernardino, Inland Empire (S.Cal.) district. I wonder how many are still left at $129 in other areas of the country. In rural areas, like "Neutrodyne" mentioned, there is maybe a better chance of still finding them cheap. At $175, ($160), $149 or $129, they are a good deal, since it's a good radio. They were definitely very overpriced at $350!

FACTS!

2806. BC350A has cell capable logic board

Newsgroup: rec.radio.scanner
Date: 1998-04-26 00:00:00 UTC
From: scanist@acmenet.net
Message-ID: <6hvvfo$9c8$1@nnrp1.dejanews.com>
Source record: 162308

I was repairing a friends BC350A scanner when I noticed that the logic board components on the 350A looked quite similar to the components on the 700A, In fact the exact same CPU was installed on both. A UC-1488B. Myself, being a elt.tech. and thrive on info, I did a little more investigating. I did a little surface mount component relocating (I moved a few 472 resistors around) and installed the modified logic board from a 350A into a 700A and guess what, full cellular on a BC700A with a date code of XXXE.(there is always a way !) Infact the only real difference between the main boards is, in a BC350A the main is labled PH-142AB and the 700A is labled PH-142B and there are three holes in the main board of a 350A where the 800MHZ board resides in a 700A. I don't remember reading about this information anywhere else before, but I am almost positive that I can't be the first to noticed this. If I am the first, great, if not, oh well.,anyway if you need more info how to do this mod, my e-mail is scanist@acmenet.net See Ya, Eddie

Being able to follow a conversation without hit the scan button over
and over again. I live on the boarder of the City of Santa Clara
and found it very difficult to track PD conversations during the day
when multiple agencies were active at the same time. The Trunk
Tracker made it much easier.

Of course he is mentally disturbed. The guy posts zillions of off-topic messages just so that people will respond by telling him what a stinking, lowlife dirt bag that he is. He loves the attention. Without it, he would have to consider what a neer-was, will-never-be, do-nothing, know-nothing loser he is.

His forgering posts, issuing rogue cancels, masquarading under several aliases and all of his other antics is the best that he can do. He's a first class fraud.

Johnnie, the only flaming that is going on here is in response to your
off-topic postings. Even a mental midget like you can put two and two together.
You won't because you really don't want everyone to stop flaming you.

While you're at it, what purpose do you think this groups servers, ghiz bag?
You have done nothing but post off-topic messages--at the rate of hundreds per
month for about two years already. Suppose we stopped flaming you? Then what?
Would you have something meaningful to say? I doubt it. You're a liar, a
hypocrite, a forger, and a scum bag who has done nothing but engage in
underhanded tactics.

The flames will end when you choose to shut the hell up. Only you can make it
stop moron.

Mike:

Here in Warren, Michigan, you don't gain much by using a Trunktracker, even though they're on a Motorola Trunked system. If I program their six channels in a regular scanner, all I have to do is change which one of them is locked out, every 24 hours. For some reason they change which one of the six is used for data, the other five are voice. Their conversations do not move from one channel to another, they stay put, so I don't miss a thing!

It is true, I also hear along with Police, the Fire, DPW, etc. But that's not a problem. And, I can also scan other local cities, and frequencies. That's my biggest complaint about a TT, you can only scan one system at a time, and you miss out on surrounding suburbs, etc.

Ok so now I have tapped my Discriminator chip. I opened my scanner found the chip labled 10420. I counted the leads from the top 1,2,3,etc until I found the correct ones to run wires off, I think. Now my scanner is getting open squelch and doesnt pick anything up. Is this correct? Now I have 3 wires hanging out of the back of the scanner what do I hook them to? My pocsag decoder has just a regular male headphone jack, do I need to put a female one on my scanner? And if so in order do I put the wires? Thank you...

I have had a few e-mails on this post asking ' What do I mean
in this post? ' Well, take a logic board out of a BC350A, do a
little surface mount resistor re-location, install it in a BC700A
and you have a cellular capable BC700A.
BUT....DO NOT MONITOR CELLULAR TELEPHONE FREQUENCYS
AS IT IS ILLIGAL TO LISTEN TO THIS RANGE OF THE SPECTRUM!!!

> I was repairing a friends BC350A scanner when I noticed that the logic board

Message-ID: <6i05mc$me9@usenet.srv.cis.pitt.edu>
Source record: 162328

Well, JN, that depends. Typically the distance is based on a couple
different things. First off, it's going have alot to do with the
xmitting power. You're certainly going to have to be alot closer to
a 1 watt handheld than you would, say, a 100-watt base repeater. but
there are also other factors like type of antenna used with the freq
counter, the frequency range involved etc.

In general, if we are talking about handhelds that are either 1/2 watts,
you can get those I'd safely say within a couple hundred feet NON
line of sight. If you are on a football field, or a wide open space where
you would have line of sight then that distance is going to be much
greater.

If we're talking about a 50watt or 100 watt mobile/base repeater, the
distance is going to be much greater. I've gotten hits as far away as
a few MILES. Again, this depends on line of sight. The better line of
sight we get, the farther the distance.

Now, cordless phones, you have to be practically right next to the antennas
to get any kind of accurate reading. They operate on fairly low power.

Cell phones, I get hits on fairly regularly when I'm out driving. These
are xmitters in the range of <1 watt - 3 watts. A couple hundred feet,
if I had to guess, and across a four lane highway.

I believe a gentleman by the name of Rich Wells has information on his
website concerning freq. counters. This page is invaluable if you are
involved in this sort of stuff. (Thanks Rich)

http://www.qsl.net/n2mca/RADIO.HTM <--- thats the address

Hope this helps.

Hi there.

I have a feeling you are NOT using the discrimnator output of your radio.
If you are using the earphone jack, or speaker jack on your scanner,
that probably isn't complete enough audio signal for the program to use.
Typically, most radios have some sort of limiting circuitry prior to
sending output to the speaker/output jacks. Now, a mod would be needed
to get discriminator output on most rigs.

READ THE MANUAL and the readme files that came with poc32 - they talk about
this in about 3 or 4 different sections.

I agree with this. Maybe the trunktacker is only needed in the big
city. Our county has a trunked system with 5 frequencies, as does the
city (5 frequencies). Like yours, the data channel changes every 24
hours. I keep a PRO-2041 set for all my channels, trunked and
non-trunked, as is my BC890XLT. I keep the 890 set for 2 second delay.
I really don't think I miss anything. And I know I would be missing a
lot if I just sat here listening to one trunked system, to the exclusion
of everything else. I run both scanners through my stereo system, that
also serves as the sound system for my computer.

Old portable scanner broke - looking for nice new one.

I would like to buy a scanner that:
- was bought recently (last 3 months - this year)
- has at least 200 channels (10 banks)
- covers 25-54, 108-174, 406-512, 800-960 (excluding cellular)
- is in good condition, with all items it came with
- about $100-$200

I am only 15, don't have much to spend, love listening to scanners, but would like to hear the good ol' 800 mhz band. All I've got now is a broken portable and a desktop (doesn't cover 800), so I want a portable again.

Thanks. Please reply to email by this address or rfaricy@compuserve.com.

Ok, I was trying to find an easy way to identify Motorola radios a few
weeks back and found that www.mot.com(Motorola) web page was pretty good.
They have pictures, specs(freqs used), etc all out there.

Look at http://www.mot.com/LMPS/products.html web page, and then click
on portables or TalkAbout.... Either way you'll find a picture.

Hope this help.s

Source record: 162403

Does anyone know were I can obtain a copy of the new Beat Map for Montogomery County Police? I'm interested in the Germantown, MD District which is now broken into 4 sectors (Mary, Mary, Ocean and Delta for Gaithersburg City). I know that in the past the Mary and Nancy Beats were divided by Route 355, but have not idea where the new Ocean Beat is divided at.

>can tell a tracking receiver won't do much good here or will it ?

Sure it will! If you have a Motorola analog system (I'm guessing you have the analog part since you're probably listening to it). If it's not Motorola ... well, you already know you can't track those with the TrunkTracker.

When you put the radio in TrunkTracker mode, it seeks the data channel and "listens" to it whenever it's not monitoring an active group. If it no longer "hears" the data channel (like when the data channel jumps to another freq), it waits a few seconds to see it it'll come back, and then it seeks again. As long as you've got the system's freqs programmed, no problem -- it'll find the new data channel.

Depends on the system type. If they use a motorola type I or II system,
you'll be in great shape to use the TT on them. If they use GE/Ericsson,
then it won't work too hot on those. But, if you can tap the discriminator
output, or better yet bribe an expert to do so, you can monitor GE systems
thru some freeware on the net (although I confess I have yet to try it. I
generally wait until the warranty expires before cracking the case and
tinkering..)

From: hurst_m@hotmail.com
Message-ID: <6i3ct9$pj9$1@nnrp1.dejanews.com>
Source record: 162111

I was visiting several web sites with information on various types of memroy such as EEPROM and flash rom. According to these sites, EEPROM chips can only tolerate a certain number of read/write cycles before self destructing, usually 10000. What happens to scanners with EEPROM (such as the Pro-26 or BC 3000XLT) after the memory has been used up?
Someone could easily reprogram their radio 10,000 or 100,000 times within a few years, especially with computer assisted monitoring.

Bob:

Not really... however, I remember a third-party, short-wave converter that you could piggy-back on top of the IC-R7000, and then it connected inline with the antenna connection. As I recall, it worked, but not as well as a dedicated short-wave receiver.

You are absolutely correct about the "supporting" membership. I too like the QST magazine. It has great ads, some good articles, and some timely information about our hobby.

I do not use the ARRL equipment insurance program (read the fine print sometime and you will see why) and I do not care for their "representation" of my needs and/or desires in amateur radio. I think they have become a "legend in their own minds" and are attempting to throw even more weight around.

I personally consider the ARRL directly responsible for much of the decline of amateur radio enthusiasm due to their Incentive Licensing SNAFU of many years ago and their current refusal to acknowledge that amateur radio is modernizing - in spite of the ARRL's efforts to prevent it.

??

Sorry, it just seemed to fit. The Caltrans system ID's are not 400-2 or
500-3 as you suggested because they are not on a type I system. They are on
a type II. If you are monitoring a type I system in type II mode then you
get the results you mentioned above. Check the manual under fleet maps, it
goes into great detail about it.

2867. CORRECTION: Send STRAW POLL Discussion to rec.radio.amateur.misc

Newsgroup: rec.radio.scanner
Date: 1998-04-27 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i32lk$ip4$1@newscene.newscene.com>
Source record: 162117
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap,news.groups

Based on thoughtful feedback from Kathy Pascoe (kpascoe@ford.com) and Yves Belleveuille (yan@storm.ca) on news.groups, I've come to the conclusion that rec.radio.amateur.misc would be a better followup target for this straw poll discussion.

I sent the original copy (complete with exact headers) to several experts, including past newsgroup proponents and our volunteer UVV votetaker for review a week prior to posting, but unfortunately no one (including me) noticed that a followup to news.groups might generate controversy. As helpful as the standard FAQ documents on newsgroup creation were, they weren't (in my opinion, at least) sufficiently clear regarding the inadvisability of conducting informal meta-discussion on news.groups. It's also sometimes hard to figure out what's appropriate on what newsgroup by observing others. According to Kathy and Yves, news.groups is an appropriate target for discussion in response to a formal Usenet Request for Discussion (RFD), but informal pre-RFD discussion (including straw polls) should probably be conducted in an appropriate home newsgroup.

Since more than one person has offered this feedback, and in a thoughtful and convincing manner, I'm posting this correction, and asking that followup discussion on this straw poll (which should commence, as scheduled, in 30 days time) go to rec.radio.amateur.misc.

I just purchased a Fisher Price baby monitor with a privacy feature (speech scrambler). The transmitter has 2 channels. I turned the thing on and began scanning the 40-46 MHz range with my Uniden 3000XLT, wanting to hear what the scrambling feature sounded like. Initially I turned the scrambling feature off. I found a "carrier" for each channel somewhere in the 46-47 MHz range (don't remember the exact freqs).

But the scanner reception was crap! I could barely hear any signals from the transmitter with my scanner. However, the baby monitor receiver was picking everything up, including another monitor somewhere else in my neighborhood! This is quite distressing :-(What gives?

> Might buy one if it is a reasonable performer.

It's more than a reasonable performer. Pay no attention to the fact that the BC895XLT looks exactly the same as the BC890XLT. I owned one of those bricks... Under the hood the '895 is a major, major improvement. Image rejection is far better, reception in the 220-500 MHz area is outstanding (it really sucked on the '890), and it has built-in CTCSS with a new "search" feature. I would buy this radio at the same price even if it didn't have the TrunkTracker capability.

BTW I purchased my '895 from Communication Electronics in Ann Arbor, Michigan. I've heard bad things about CEI, but I personally have never had the slightest problem with them. Twice in the past I returned scanners to them with only a out quibble, and no "restocking fee," which seems to be the latest way mail-order companies can screw their long-time, loyal customers.

Yeah, I'm talking about you guys, EEB... I got your 25% restocking fee right here.

|Is there anyone can tell me how to make a antenna lamp which could be driven
|by radio radiation,such as elctro-magnetic wave emitted by a mobile phone.The
|lamp is just attached to the antena.

I don't know how applicable this is, but RSGB _Radio_Communications_ some months back had an article about the use of high efficiency LEDs to detect small amounts of RF radiation. Basically, they put a diode (I assume you can use a Schottkey so that it will function at high frequencies) in a series circuit with the LED. RF voltage was introduced into the circuit via a small number picofarad capacitor at a node between the normal diode and the LED... the idea was that you could place the capacitor on an RF source and this would create enough DC voltage(energy) to light the LED...

Lower the Line In level on your sound card controller to nearly closed, less then 1/4%.

From there, start the program and tune to the frequency you want to decode and set the volume on the scanner so that 1200bps signals produce ONLY 4 bars on the level indicator and ONLY 3 bars for 512bps. My Pro43's headphone jack to my line in on my SB produces 100% decodes at a LOWER level setting as opposed to a all out blast.

>I just purchased a Fisher Price baby monitor with a privacy feature
>(speech scrambler).....

Your Fisher Price baby monitor is probably fitted with an
antenna which is optimized for 49 MHz range reception.

The stock BC3000XLT antenna is not a good performer on
the VHF-low band.

460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Me either. I have been a ham for almost 21 years. In that time, I have NEVER understood why hams are so fascinated with modifying their rigs to transmit outside of the allotted ham bands, except for CAP and MARS, of course (and out of a half-million or so US hams, only a few thousand are licensed for CAP and MARS operation!).

We modify our HF rigs to transmit anywhere they receive, and we modify our 2m FM rigs to transmit from 136 to 174 MHz. WHY? Even if we DID have a reason to transmit out of band, it's illegal to do so because the gear isn't FCC type-accepted for it. FAR too many HF rigs are EASILY modified to work 11m CB and the "free band" areas above and below 11m CB. It's as simple as lifting a diode, clipping a resistor, tying an IC pin high or low, or some other insignificant mod. THIS is what the FCC undoubtedly objects to, and I whole-heartedly agree. It would be quite easy for the manufacturers to block this in software or firmware. Why not offer CAP and MARS operation as a no-cost option, with slightly reprogrammed band limits in the software?

Personally, I would love to see ham-bands-only gear make a comeback in the modern world, with band-switched front-ends and such. HF receivers would perform SO much better if this were the case, especially if you throw in modern DSP techniques and top-quality filtering along with a nice, tight front-end.

What's so special about having general coverage receive in an HF rig? I own a non-general-coverage HF rig (an old Ten Tec Corsair I) and a very nice little Sony SW-100S portable shortwave receiver, and I'm quite pleased with both. I can take my SW receiver on vacation trips as well as listening to it at home. Can you take your YaeKenCom HF rig, P/S, and antenna along on a Caribbean cruise or bus trip around Europe or backpacking up in the Rockies? Of course not. My point is, in my HUMBLE opinion, the hobby would perhaps be BETTER off if ham gear

were ham-bands-only.

Your mileage may vary.

Hmm, maybe if you're using a transverter, you want transmit coverage
outside of the band -- so you can cover more of the Microwave/VHF band?

2903. need a charging stand for a cordless phone

Newsgroup: rec.radio.scanner
Date: 1998-04-27 00:00:00 UTC
From: Rich Collins <writejob@dnai.com>
Message-ID: <6i2fbk$nn7$1@castor.dnai.com>
Source record: 162178

hello to all,
I hope this is the right group to pose this question to, if not excuse me.

We have a SW Bell cordless phone and want to use it in a room that has no available phone outlets. The base station is located in a third floor office and it is impractical to keep running up and down stairs to charge the phone.

The model is:

HAC 892 (FCC ID CSQ 9470)

We understand that SouthWest Bell made a remote charging stand, but our local dealer Fry's electronics no longer carries them. I guess the trend is towards phones that have a compartment for battery charging.

It seems like we should be able to find a charging stand, but I get blank stairs when I go in a store and ask for one. Can anyone direct me to a supplier. I've spent over an hour searching the web and did not find a supplier that sells a base station charger. They should be a dime a dozen No?

Thanks,

Most of the scanner pages use the "Scanner" WebRing. You can refer to my page for details.

I am inquiring about two products that were sold in the 1997 EEB catalog. I understand EEB went through some problems and is no longer selling to the public. The item I wish to purchase is an AC to DC power inverter pictured on top of page 59, colored blue, and came in 7 different models starting with PC50 and ending with PC1500. I am interested in these models as they had a modified sine wave output. Most brands have a square wave which can cause problems. If anyone knows where these can be purchased, please let me know. EDCO has not been of help.

I plan to use a DC power supply to power an inverter to power 3 antenna splitters that are AC power only and 3 Metrowest ProPower 3 handheld scanner chargers. The reason is that I have WAY TOO MANY AC devices plugged in and therefore, run 7 base scanners from 1 power supply.

Also, if anyone has any ideas about modifying these devices directly for DC power please let me know.

Please E-mail me at: studioded@aol.com

Thank you to all who reply.

Dave

Most scanner problems are caused by people monkeying
around inside. They take 'em apart and then forget
some detail of reassembly. Sometimes, they actually
booger something up.

Chances are, someone porked it and then returned it
to Radio Schloque and you happened along and snarfed
it up.

The most obvious thing to check is the antenna connection
inside the radio. To take it apart, the antenna lead has
to be unsoldered and it is often overlooked during
reassembly.

Worth a look. Take it apart and peek in the side so
you can eyeball the inside of the BNC connector. You'll
see a wire from it up to the top board where it should
protrude through all the way. It should be well soldered.
If not, that's at least part of the problem. The ground
lug from the BNC shell must also be soldered to the
ground trace on the PCB.

My general impression here is that you are a victim of the bearcat
"suckiness on VHF-low" syndrome. At least with the stock antennas,
their radios are nearly DEAF on those frequencies.

"Modified sine wave" inverters are still square wave inverters. You can
get real sine wave inverters from Exeltech (and a couple of other
suppliers).

> bought it new, theyll repack it and stick it back on the shelf.

Yup. And the next poor sap won't get a new unit.
But he will think he is.......

Once upon a time, some bloke bought what he
thought was a new PRO-2006 from the Schaque.

Turned out....it was a much older PRO-2005
with the faceplace of a 2006 carefully installed.

The fact of the matter is the adam henry before
him bought a 2006. Then swapped front panels
with his old 2005 and then returned the 2005,
now apparently a 2006.

Good thing the second dude happened to pop me
a question about the innards, and when his
description didn't jive, I was able to put two
and two together and find a pile of stink in Denmark.

The bottom line is that there is ALWAYS a massive
cost to this unilateral replacement/refund policy.
An item that should cost $250, all things being
equal, is priced at $449.00 and then occasionally
put "on sale" at $299 to give people "good deals".

Rubbish!

It's a big scam widely perpetrated on the public.

Ok, you can only plug in your scanners line out or earphone out to the line in or mic in of your soundcard, uless your scanner comes wih a more sophisticated IO, which I doubt. Be careful that the levels are dwon when you do this, as frying your sound card would suck. Just use Sound Recorder for windows to record directly from your scanner.

The MRF-904 is not a device with a very wide dynamic range.
It would be inferior to replace a BJT transistor with it.

No, there are no known better replacements for the
2SC3356. It is pretty hot as it is.

Very close.

20-40 ft from handheld Tx's. 20-50 ft from
mobiles. 30-100 ft from base stations. And 50-
500 ft from broadcast stations.

Oh....and a few inches from cordless phones
and baby monitors, etc.

The Baby Monitor has a very poor receiver, designed
for short range. It hears everything there is to
hear, though, including hordes of stuff that really
ain't there in the first place.

Even cheapo scanners have better receivers than
Baby Monitors.

There are a number of criteria by which to evaluate
receivers, one of which is how well they can hear
(sensitivity), but another is WHAT they can hear,
including what they're supposed to reject. A receiver
is supposed to hear ONLY what's on the tuned channel,
but unfortunately, many....especially the cheaper ones,
hear on adjacent channels as well. Baby monitors are
a lot like that, and should not be compared to scanners.

The scanner could be picking up a weaker harmonic of the original
signal. Either that or the Baby Monitors antena is more sensitive
arround that frequency.

Does the owners' man. state the carrier signal's frequency? There is
probabaly a label on it to certify that it is 'licence exempt', that has
a number on it which can be used to find out the carrier freq. :-)

Most "mods" for the PRO-37 do not lend themselves
to placement in a simple ASCII text file. Details
like photos, charts, tables, and lots of verbiage
generally require formal publication in a book or
magazine article. As such, the PRO-37 is capable
of dozens of mods.

So long as you can manage the details, cellular
capability is restored by clipping the exposed
leg of D-13.

>takes for all your help guys and gals.

I don't think the above scenario is possible. Here's why.

Each trunking radio listens to the control channel for it's frequency assignment. If two fleets key up at the same time, the computer selects one fleet, assigns it, then selects the second fleet and assigns it. Each fleet has a different priority level, so the one with the highest priority gets the channel first. I'll use Glendale AZ 's TRS as an example:

Let's say a user on fleet 300 (police, priority 1) and 100 (Local dial-a-ride-bus service, priority 5 or 6) keys up at exactly the same time. The controller will assign it's priority user first, the PD. So our searching trunk tracker will lock onto fleet 300, since it was assigned first. Then the controller will assign fleet 100, and in response, our searching trunk tracker will light up one of the fleet indicators (the row of little bars that runs along the top of the LCD), telling you another fleet is active. If you hit search then, it would lock onto 100.

Hopefully that helps.
-Phil

2927. Discriminator Chip pinout

Im planning on adding a tap off the chip to get the baseband audio. Mine is a simple question. When looking at the chip, label right side up, is pin 1 at the upper left hand corner? Also, is that first pin number 1 or number 0?

BTW - the discriminator is a TK-10420 on a Pro-43

Thanks

I used to offer one as shareware, PC895, but due to corporate B.S. (not to put too fine a point on it) it had to be discontinued - as shareware anyway. I have almost completed version two of the program (total rewrite and bug fix), and, to further cheese off a certain corporate entity, and clear my good name in the scanner community, I will give it away absolutely free. I'll post a new web address for it soon. Here are some others:

Freetracker : Freetracker, as the name implies, is free. It does lots of cool stuff, but to be honest I have yet to try it myself. I guess I'm just partial to my own program. The author often posts here, and a Dejanews search will get you the address to get it from.

Radio Manager: I liked this one, but not all of the things it did. When I close it, it leaves the scanner blinking at me like I was entering a frequency or something. A cool feature was on the fly fleet map conversions for whatever talkgroup you were monitoring. That was cool. It has many other nice features and an added plus is that it controls other radios too..

Scan Star: Didn't care for it too much. Too pricy, no keypad control to the scanner. I found it kind of clunky to use. I'm sure it works great with a PRO 2004 CE232 or an AOR, but not my BC895.

Scan Cat: Same as above. Not my bag, but some people like it alot.

ScannerMaster: This was the one you could order out of the Uniden box for an ungodly amount of money. I didn't even give it a second look. They also offered a Trunked Systems CD for even more money (80 dollars or so) which I thought was stupid because my $20 Percon CD gives that info and more. Go figure...

That's all of the ones I can think of. Just for grins I even wrote a quickie in QBasic of all things - that was fun... if you know a programming language, go get the command spec for the radio and have at it! Half the fun is I have with the scanner is writing programs for it! ;-)

It is completely impossible! First, I am assuming that you're
referring to the Montgomery County in Maryland. The reason that its
impossible is that they do not have a MODAT system any longer. It was
taken out of service a year and a half ago.

It's something I've noticed in some older Bearcat scanners in a high RF environment - aggravated by the fact you're within a mile of one of those pesky cellphone towers.

The best solution would be a low-pass filter or an attenuator.

If it wasn't for the fact that many people just like to get QST magazine, (and automatically become full members, Ham or not) The ARRL would not have as many members as they like to believe!

2938. Re: Make Your Own Cable TV Decrambler

Newsgroup: rec.radio.scanner
Date: 1998-04-27 00:00:00 UTC
From: n5rkn <n5rkn@apex2000.net>
Message-ID: <3544143F.15CBE658@apex2000.net>
Source record: 162240

Let me just add: Go ahead... build your own descrambler. It's a free world...right?
However, be forewarned that no matter how many times they tell you that "it's totally legal" or "contact your local cable company" (right...like you are really going to do that?)
WE will still catch you and in some cases, file theft charges against you.... IF, we find you watching services that you are NOT ON BILLING FOR. Regardless of what these hucksters say.... It's against the law to receive cable services and not pay for them... when they are normally a pay service that your local cable company charges for. There are SPECIFIC laws both Federal and in most states that allow for prosecution in most of these cases.
Here's another note... even if we don't file on you, but know that you are using equipment to illegally receive our services, we can fix it so that your "box" does not receive anything. And... again... regardless of what the ads say, there is no way to defeat some of the current technology that safeguards against piracy.
How do I know? I've been in the cable industry for nearly 20 years. What is my specific job? Theft/audit. I look for and find piracy...then warn, and if necessary, file theft charges against the residents of the home. There is no trick that I haven't come across..including the infamous black boxes, that I can't fix so they don't work.
Why do you think your cable bill creeps up from time to time? Piracy is just like shoplifting. In time, it affects the consumer by causing costs to rise. Receiving any service that a cable company charges for....without paying for the service... is indeed... PIRACY!
Does the cable company overlook this? Not entirely. Though some companies may not have a full time audit & theft position, they still respond to any threat of piracy. Some companies have excellent and full time (24hrs) audits.
I have caught thieves climbing poles at 3am. And, yes, we filed on them.
One more note: IGNORANCE is no excuse in the eyes of a court! You can exclaim all you want that "I didn't connect it", "I didn't know it was against the law", "it was on when I moved in"...etc, etc. It doesn't hold water in a well built case.
Just thought I'd post, as I get real tired of seeing these bulletins about cable converters, and most electronic magazines carry them also.
Hey, guess what? Do you know that the Feds bust dozens of these individuals and companies on a yearly basis. Know something else? Quite often, these bozos have records of their sales. Guess what? The feds pass those along to the local companies that were affected by sales to their areas. And, the final insult to you... the buyer... we follow up!!
So, you've spent your money and either bought the converter or built one

up. What happens if two days after you put it in use, we find your service is receiving extra services and we "fix" your address so it can't receive those services anymore? Kind of crappy, isn't it? Lost your money for nothing, eh? Try getting on billing legally.... it's a lot more satisfying in the long run. And, you don't run the risk of a police record, and possible jail time.
Again, regardless of what they say... we can and are able to detect whether or not you have an unauthorized piece of equipment hooked up to our service. Now, whether or not your local company is running the detection equipment that ours does... I can't answer. But, is it worth the risk?
On that note... have a good day...
Robert

Yeah, that would really suck.... I wholeheartedly agree with you.
Amateurs have an existing set of rules to remember as it is, never
mind prohibive band plans and extra rules thrown in by the ARRL.

The ARRL isnt 100% bad, but they definitely need to be
put in their place, just as the FCC needs to be "realigned".

I mean, seriously, what makes the ARRL the "gods
of the hams"?

Even if you could afford to purchase a radio exactly like the agency is using, you would need the encryption key or code to program it with; also, most agencies who use digital scrambling download new codes into their radios every month or so. I'm afraid that unless you're with the NSA, you're probably out of luck (unless you can hack into an audio line from one of their own base station receivers...)

That information is only dispensed on a "need to know"
basis and since you and I have no relationship other than
that of subject vs. observer, I see no need to tell you at
this time.

You act as though you are suspicious of me. That is normal
considering the circumstances but could also be due to delusions
of persecution. Perhaps your condition could be more advanced
than I thought. Are you currently under the care of a mental health
practicioner?

To All who donated their help I apprecieate it...
My findings are as follows-

I used POC32.. It only required me to tap my discriminator,
and feed the audio into my soundcard via a standard patch cable...

I can decode numeric pages fine, and some alpha pages
(function code 2) and sometime 3 .. but I get a lot of garbled alpha
pages....

I am going to build a couple of HAMMCOMM type interfaces and
see what kind of results I get....

Then I will procede to the MDT decoding....
so Im sure you will all be hearing my requests when I get to that
point.
thanx again

Got a moment . Any feedback would be appreciated.

Running poc32 w\ pro2006 discriminator output. I have 1 ch enabled w\
soundcard level rolled all the way back. Level bar indicates full.
Program decodes lots of trash, but says success rate = 75%. I have a
good rf signal. Is this garbage just transmitter output or what. What
level does your bar hit for solid decode. Maybe I need a resistor in
audio line ? By the way I can't find the manual in the program. Also
sound card has a radio,cd and phone setting does not seeem to matter.

>something. Thanks.

A Motorola Type-II trunked system near me shifts each talk-group round-robin through the frequencies, in reverse order, after each transmission ends, even if no other talk-groups are active. For instance, the frequencies are 856.7625, 857.7625, 858.7625, 859.7625 and 860.7625. When a transmission ends on 859, that talk-group switches to 858... 857... 856... then back to 859. This doesn't pose a major problem until two talk-groups are active. You're listening to a hot police chase, then suddenly you're listening to the garbage crews, and your chase has jumped back a channel. I've noticed this "reverse-round-robin" pattern in more systems lately, too.

I agree that it would be great if by entering only the control channel frequency, the scanner could automatically enter all the other frequencies in the trunk. Does the control channel contain actual frequency information, or does the data stream simply refer to the different channels by ordinal number? I'm guessing the latter.

2953. iCOM CI-V cable

Has anyone successfully buit a cable to allow for computer control, say via ScanCat, of their R-10? I've got the PC-to-radio cloning cable, and have been told that all that needs to be done is switch tip and ring on the cable and it will work for computer control. Anybody had any luck with this? I sure as hell haven't......

Baby Monitor transmitters/receivers transmit/receive only on the
following freqs (that I know of):
49.830
49.845
49.860
49.875
49.890

Note:
These are also used for the new (toy) walkie talkies and remote control
toys.

Does anyone have any information about Bandercom in Finland? I placed a scanner order with them nearly 2 months ago over the phone. Since then I have written them 4 emails asking for information on why my scanner has not arrived and why my credit card shows no billing from them either. Though this is better than no scanner and a bill for one!
I received a single email 2 weeks ago from "pete" stating that he would have an answer for me in 2 days and that he was looking at my order form as he wrote to me.
Does anyone know if they are still in business? Shipping radios.....etc?

Anyone here ever order from them and want to tell me your experience? I have seen a post or two in the past complaining of long delivery times from them..... but two months really does seem excessive.

Definitely need to at least hook up to an external speaker jack. On my
2004, that only yields decoding up to 512 baud. Hooking up to the
discriminator really opens up possibilities to 1200 and 2400 baud.
One thing to think about is that it will only decode POCSAG pages.
Trying to listen to some 930 MHz pagers won't get anything (FLEX
protocol). But some of those pagers transmit several different
protocols including POCSAG.

2962. 2-way paging/pagers

Newsgroup: rec.radio.scanner
Date: 1998-04-28 00:00:00 UTC
From: Myles Barkman <kg5ai@tca.net>
Message-ID: <3546A690.546216F9@tca.net>
Source record: 161964

Have some questions on how 2-way pagers work.
Here's my theory:
1. Pager tower sends page blindly the first time.
2. RX sends ACK if in range.
3. If RX not in range, pager service queues page(s) until it receives ACK from pager unit.

Questions:
1.What are frequencies used by this service (Specifically Skytel) and is it narrowband?

2.Does pager tower transmit on different frequency than pager unit (most probably YES)?

3.How much power does the pager unit transmit?

4.Are multiple receiver sites utilized by the pager company to receive these pager unit acknowledgements?

5.After one page is not acknowledged, are all subsequent pages queued until the pager unit says it is in-range or does each different page get sent blindly once?

6.How does the pager unit decide it is in-range? Is it a certain receive signal strength, reception accuracy level, etc..?

You need to feed the output of your scanners earphone/discriminator straight into your sound card with a patch cord. I doubt you will get anything with a mic/speaker combination, it will be very noisy.

Source record: 162006

The Los Angeles City Fire Department has a slight re-configuration of its radio frequencies
effective 0800 Tuesday, April 28, 1998.

Former Admin Channel 6 is now assigned *exclusively* to the "Emergency Trigger" (was shared use).

All Admin (and Support Services) radio traffic from Channel 6 has moved to Channel 5. Channel 5 will now be a shared use frequency for both "Admin" and the "Fire Prevention Bureau". There are no other changes planned for the near future.

A full frequency list showing these changes can be found on-line at:

http://www.lafd.org/freqncy.htm

You might want to try the same procedure as listed for my Techtoyz
frequency counter. Press one of the buttons on the top of the unit and
turn on the power. If one button doesn't work, try the other. There
just aren't that many things to press or switch; the trial-and-error
method should take just a minute!

Wondering if the bad reception he's getting on his 3000XLT is due less to bad reception of the scanner, but rather of the bandwidth of the transmitted signal. Is it possible the baby monitor is transmitting at a somewhat wider bandwidth than the IF of the 3000XLT can handle at that frequency, thus the quality of the received transmission is degraded, even though the signal strength might still be strong. Same thing happens when you pick up TV audio on a scanner that does not have WFM. Also, on some cell-capable scanners you get the same sort of distortion - i.e., the cellphone transmission has a wider bandwidth than the scanner's IF thus causing audio clipping or distortion, even though signal may still be strong.

Just a thought.

Mike

In the UK we still use these freq.

The base station freq. are :-
1.642, 1.662, 1.682, 1.702, 1.722, 1.742, 1.762, 1.782
All FM,. Not all HF receivers allow FM, but if you try AM and tune up
or down the freq. you will get it, but slightly distorted.
The handset freq. are :-
47.45 through to 47.55
again all FM, but you will only hear the handset side of the call.
The UK has just introduced some new freq. any info appreciated.

2988. Salt Lake Trunking

Newsgroup: rec.radio.scanner
Date: 1998-04-28 00:00:00 UTC
From: jcarra@xmission.com
Message-ID: <354627d5.8260445@enews.newsguy.com>
Source record: 162023

I'm considering buying my first scanner and have narrowed the choice to the Relm HS-200 or Uniden BC235XLT.

I'm mostly interested in public safety scanning. At present, none of the public safety services in Salt Lake City or Salt Lake County are trunked but a couple of internet sites state that the county will be switching police to their trunked frequencies this year.

Can anyone confirm this? I'll probably go with the Relm unless I'm convinced that I'll need TrunkTracking in the near future.

Thanks,
Joe

I use the external speaker jack on my pro2006 and it works
pretty good. I also tried my aor8000's headphone jack and that did not
work as well. I think if I used the discriminator tap on either radio
that the accuracy (poc32 choosing the alpha or numeric) would be much
improved.
Cheers,
DR

I was talking to the RS personnel and they get commissions for
whatever they sale. As the product's price goes higher, the
percentage of comission drops. (ie. 10%* comission for batteries
while 1%* comission for computers etc. * percentage is for
illustration purpose only)

Unlike other electronic franchises, RS is usually nice about refunds
and customer service.

I have downloaded POC32 and installed it but cannot get it to work. Can anyone help? Let me describe what is going on. First I have used a microphone placed close to the speaker of my scanner. The Left and Right channel indicator bars respond to signals from the scanner - with the volume turned up about halfway on the scanner and almost full on my PC, the bars are peaking. I have tried cutting back on the signal to see if that makes a difference. In addition, the L and R light up signalling valid reception but I get nothing on the monitor. Its like the output from POC32 is going somewhere else instead of the monitor? Any suggestions?

Try Kracars for decoding Acars, Freq varies dependant on which
continent you live on.

Try Poc32 for decoding Pocsag messages ,again freq. vary by country.
www.lrz.de/~./pocsag.html

No website addresses available for Kracars, but do a search on
Webcrawler under "Kracars" or "Pocsag" both are pretty good and FREE!

Hope this helps

Vanlaywan

does any body know who uses this band in ohio or florida?
any radio out there that can get this stuff?
compranded side band?
what is the difference between this and regular side band or independent
side band?

There is no interface required! Pick off the discriminator audio and feed it directly into your sound card. If you have stereo inputs you can even take feeds from 2 scanners at the same time. It is so simple!!!! The software is a brilliant work of art (saluting the author!) Best wishes.. Mike K8MB.

In order to actually put this b.s. behind us, YOU MUST STOP
RESPONDING!!!

I found this article a few months ago on a ng and I think it pertains to
situations like this one:

Q: How many news group subscribers does it take
to change a light bulb?

A: 1,331:
1 to change the light bulb and to post to the news
group that the light bulb has been changed
14 to share similar experiences of changing light
bulbs and how the light bulb could have been
changed differently.
7 to caution about the dangers of changing light
bulbs.
27 to point out spelling/grammar errors in posts about
changing light bulbs.
53 to flame the spell checkers
156 to write to the list administrator complaining about
the light bulb discussion and its inappropriateness
to this news group.
41 to correct spelling in the spelling/grammar flames.
109 to post that this news group is not about light bulbs and
to please take this email exchange to alt.lite.bulb
203 to demand that cross posting to alt.grammar,
alt.spelling and alt.punctuation about changing
light bulbs be stopped.
111 to defend the posting to this group that we
all use light bulbs and therefore the posts
are relevant to this mail list.
306 to debate which method of changing light
bulbs is superior, where to buy the best light
bulbs,what brand of light bulbs work best for this
technique, and what brands are faulty.
29 people who post under other peoples names to flame
everyone else.
27 to post URLs where one can see examples of
different light bulbs
14 to post that the URLs were posted incorrectly, and
to post corrected URLs.
3 to post about links they found from the URLs that
are relevant to this group makes light bulbs
relevant to this group

33 to concatenate all posts to date, then quote
them including all headers and footers, and then
add "Me Too."
12 to post to the list that they are unsubscribing
because they cannot handle the light bulb
controversey.
19 to quote the "Me Too's" to say, "Me Three."
4 to suggest that posters request the light bulb FAQ.
1 to propose new alt.change.lite.bulb newsgroup.
47 to say this is just what alt.physic.cold_fusion
was meant for, leave it there.
143 votes for alt.change.lite.bulb.

Source record: 162048

Just curious Jose, as to what parts you find "untrue"? Let's see...hmm, do you know what a TDR is? Do you know that all converters, especially ones that we know are being marketed within a community have a specific IF freq? Are you aware that we can hook into a line and actually monitor what the set or converter is tuned to? You don't? Shame.
Did you know that the "bullet" protections devices usually drop your signal so much that your picture isn't worth watching. Now, that's in most cases. Perhaps you've been one of the lucky ones.
Now, I've imparted some minor facts that most of this group should know....without giving out a few trade secrets. But, those are usually found within most of the cable industry trade magazines. For the most part, theft and illegal converters are found by good ol' ground pounding and by tips. Especially when a ex-girlfriend/wife, or upset neighbor or friend get tired of the bragging about how you are getting FREE cable services. A simple RF trap will take care of the illegal converter... and then in most cases the address is logged, monitored and watched for further infractions. The resident is contacted and warned about possible theft. Then, if it re-occurs, legal action is taken.
Now, I've been pounding the pavement for nearly 20 years (as previously mentioned).
I've learned all the tricks that people use to "get away with stealing" services. I use for the most part, simple detective work to watch over our systems. However, I also use different modes of technology to help monitor. Sometimes, something as simple as a good old scanner.
Now, if you think you can beat me at my game, you are welcome to try. Warning, I have 25 years in the technical fields and I've seen it all. I have an attitude also. I treat thieves as they deserve... just like any shoplifter. And, my policies and procedures have been adopted by several systems around the US.
Again, some companies overlook a lot of theft. But, times are changing.
"To the Scanner Group": Thanks for the space and time. I'll try to limit my replies directly to the individual in the future.

I agree, a meaty database program would be the ticket for a hardcore user to store his entire frequency list for all his gear. I tried monkeying around with MS-Access, and found that it was full of features I didn't need, and my result was a clunker of a frequency management tool, with alot of neat bells and whistles I didn't need. Whatever method is used, if the result is a speedy load-time, and the display is graphically concise, I'm happy. BTW, after all the great advice and opinions of the readers of rec.scanners, I purchased Excel 97.

Both you guys seem rather smug with yourselves. I did not pose a proposition but did ask a question. If both of you think it was a silly question, that is fine - you are entitled to your opinion. You also have the right to post whatever you want - just as I do.

By the way, I did read the document that is available with POCSAG and yes it does talk about using the discriminator output. But did you read any of the prior postings from "NEUTRODYNE" and at least one other person that suggests that it will work with a microphone?

> few years, especially with computer assisted monitoring.

Stop and do the math. You should be able to see
where it would be almost impossible to program
a given memory cell in an EEPROM 10,000 times.

The limitations of EEPROM programming are not
specified in program attempts; rather actual
"writes" to a cell. When a cell blows, the chip
is considered "blown", but any given cell to be
hit 10,000 times is pretty far fetched.

Do you know how long it would take to program
Channel 1 ten-thousand times? The scanner
would be old and long outdated by the time
that happened.

In actuality, the 10,000 spec is worst case.
Real numbers for most EEPROM chips prove out
to be a lot more than that.

See page 5 of the May 1998 issue...
"Membership and QST cannot be separated. Fifty percent of dues is
allocated to QST, the balance for membership."

The day they separate QST and ARRL membership, is the day they lose 95
percent of their members.

Let me explain it to you...
In case of emergency where life is in danger, and attempts to reach help on ham bands are bringing no response, Hams ARE authorized to use any frequencies available.

This has allready been the case, in remote areas where repeaters were not accessable, and no one was monitoring the simplex calling freqs, and the person made the call for help on the local police frequency. At first the police wanted to confiscate the radio and charge the Ham (after his friend's life was saved of course) due to their ignorance of the federal law, but were forced to give back the radio, drop the charges, and LEARNED that this was in fact legal via FCC rules.

I want ALL frequencies available in my radio in case I need them. I have never YET needed to do this, and for those afraid of running into a police department that doesn't know the laws, it is better to be ALIVE and in court over the issue, than DEAD somewhere with an unmodified radio!

I believe all of their lowly employees start out with 3% commission, and hopefully managers and more experienced slaves get even more. A friend of mine worked there for less than six months and got the 3%, but I am not sure if it was on everything.

If you wanna build your own (de-)scrambler:

http://www.qsl.net/pa3eik/descrambler.htm

> Is it possible to use a sound editing tool on your
> computer to descramble the messages?

Take a look at: http://www.lpcom.com/download.html

Available for download is a real-time Speech Inverter system for Windows 95
or Windows NT and a full-duplex sound card. The inversion point is variable.
Usually, it would be used in conjunction with a mixer control, such as the
mixer that comes with Windows, to mute the passed-through audio so that the
processed audio can be heard clearly. Connect the phone/tape output of the
radio to the mic/line-in input of the sound card. An attenuating cable may
be necessary, especially if the radio's audio is connected to the micro-
phone input of the sound card. These can be found at your local Radio
Shack. When you want to decode an inverted signal, start the inverter.
Adjust the slider until the audio is understandable. Mute the mic/line-in
input on the mixer control to remove the unprocessed signal.

This software is provided for demonstration/education
purposes only and should not be used for illegal purposes.

I don't know what the percentages are anymore, but they get a percentage
against a guarantee. It's less than 10%. If they sell enough they get more than
the guarantee (usually minimum wage for a couple years). There are different
categories & the managers get additional incentives for store performance. The
percentage has dropped over the years as minimum wage went up.
There is slightly higher comission on Radio Shack branded items than "name
brand" & stuff ordered from the catalogs in the store.

Well, when the time comes to build my house, I am going to
find some old toilets and put them in my house. It takes 2
or 3 flushes of those politically correct toilets before an
"act of Congress" is completely flushed versus just 1 simple
flush with an old commode.

Message-ID: <1998042813480300.JAA16979@ladder03.news.aol.com>
Source record: 162081

RS Employees are paid a percentage of total (gross) sales. They are expected to ring up at least $75 per hour in sales. So, if a guy works an 8 hour shift, he is expected to conduct at least $600 in business. Of course, when a customer returns an item, it goes against the sales/hour rate.

Sometimes they are paid "SPIFFS" which are a bonus of sorts on certain things. Recently RS had a cellular sales contest, and each RS employee that "sold" a cell phone got a $5 bonus for each phone.

If the guy/gal does not sell enough ($75 hr) to get their commission pay, they must be paid at least minimum wage for the hours they work.

To answer your original question....yes he got paid for just ringing you up. Of course, the commission rate is only about 6%, so if your book was $10.00 he made a whopping sixty cents from you - providing he sold enough stuff already to make commission that week.

3047. Re: How does the PCR-1000 Perform on Shortwave?

Newsgroup: rec.radio.scanner

I'm anxiously awaiting Icom's release of an update to their software as well. ScanCat has released a half dozen or so updates in their support of the PCR-1000 which have been most appreciated. I get little sense of urgency or even assurances that Icom is even planning to upgrade their software.

I do like the interfaces Icom has provided - but like you, I think they have omitted crucial elements - frequency lockouts, a larger 'auto-band plan table', ability to link scan banks, etc. Its a shame they've not followed up with these enhancements on a timely basis. I grew frustrated trying to pursue this with them. Their stock reply was "We are aware of no issues with our software." Kind of the high tech way of blowing you off I guess...

FWIW, the ScanCat Gold SE version has lots of bells and whistles when used with the PCR-1000. Jim Springer and company have done a remarkable job - especially considering they have had no support from Icom in their endeavors. For those wishing to do more with the radio than Icom has decreed possible, check out ScanCat Gold SE... I am in no way affiliated with the folks at ScanCat other than a well satisfied user of their software.

I have had my PCR-1000 for several months now. Love the radio. Like the software. Have grown to consider Icom's support plans (or lack thereof) for the software as a real pain in the butt. So far any and all of my input for a need to add bank linking and frequency lockout tables to their software has fallen on deaf ears.

You might try ScanCat Gold SE - it has all these features and many more. The visual impact of the interface is a little rougher than the Icom software, but the functionality is FIRST RATE. I have no affiliation with ScanCat other than as a satisfied user. IMHO it is worth the investment.

It is a great scanner...can't find more bang for the buck.
For lots of info re: the 2041 and 64 d/l the various programs at:

http://www.access.digex.net/~kplotkin/scanner.htm

I wrote the Excel spreadsheet frequency manager/64/2041 programmer.
The easiest to use is Ken Plotkin's LOAD64.

I have even figured out how to program the 64/2041 using the Sharp
Zaurus ZR-5800 (available at www.onsale.com for $89, the ZR-3500 is
available from Shoppers Advantage for $149).

We have run this radio through the loops and it doesn't stand up to
OUR expectations. It is only double conversion and VERY noisy when on
a frequency without a PL. We have sent our's back for upgrade
modifications and have found nothing different since it has returned.

We have been using Kenwood RZ-1 receivers which are triple-conversion
but has no PL's and they far our perform the Rehm as far as receiving
goes. The Relm would be a GREAT scanner if it were triple-conversion
and has a brighter back-lit display. We bought one expecting to
replace all of our RZ-1's but have reconsidered since trying it.

My understanding is that they get an hourly wage +commission, but a certain amount of sales also have to be for "the store". If someone walks in off the street and just gets what they want and leave, it's a sale for "the store" if you spend time explaining things and actually "selling" the item then you get commission. Cell phones and Primestar seem to be the big commission items, a friend who is a RS manager gets about $200 for a cell phone sale (the commission + a "manager's cut")

3055. 220 Public Safety Frequencies (SOCAL)

Newsgroup: rec.radio.scanner
Date: 1998-04-28 00:00:00 UTC
From: Ed Tobiasz <edt@accesscom.com>
Message-ID: <3545FC32.350A@accesscom.com>
Source record: 162090

Two agencies have filed for 220 Public Safety frequencies in the
Southern California Area.

San Bernardino County (Filed with FCC 3/31/98)

220/221.8275 MHz
220.221.8325 MHz
220/221.8375 MHz
220/221.8425 MHz
220/221.8475 MHz

Sites:
Heaps Peak, San Bernardino
Flash II Mountain, Barstow
Spirit Mountain, Laughlin, NV

City of Santa Ana Fire Department (Filed with FCC 4/1/98)

220/221.8275 MHz
220/221.8325 MHz
220/221.8375 MHz
220/221.8425 MHz
220/221.8475 MHz

Site:
Santiago Peak, Corona

The frequencies are classified as non-nationwide public
service/mutual-aid.

Emission is probably Compandered side band. I can't tell from the
filings if these are going to be used as data or voice channels.

Regards

Ed

Baba Booey wrote:
>
> I'm trying to find the frequencies for the old pre-1984 cordless
> phones which used 1.6 Mhz/49 Mhz frequency combinations. Any ideas?

All pre 1984 cordless phones used the 6 Meter band for the Handset (49.830, 49.845, 49.860, 49.875 and 49.890) and the 180 Meter band for the Base Unit (1.655, 1.690, 1.705, 1.730 and 1.755).

There was no standard for the frequency cobination back then. Each manufacturer used their own frequency pairing.

3062. POC32 w/o discrim tap?

Newsgroup: rec.radio.scanner
Date: 1998-04-28 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <6i52f0$1ku@usenet.srv.cis.pitt.edu>
Source record: 162097

Anyone had any luck using POC32 w/o a discriminator tap? I've seen more
than a few mention it, but I'd be interested in seeing which radios
you're using to do it. I can't modify my ham transceivers(that I use
as scanners) easily(or maybe at all). I do have a PRO-50 scanner, although
I havent seen any mods for it.

Perhaps I'll buy a scanner that has an easy discriminator mod.

Thanks
Keith

Are you sure the channel's you are monitoring have flex on them?
I've noticed some don't, and some are 100% flex. I also have a P100
and am using the all in one slicer. The only difference is that I'm
using a pro2006. Maybe the 2022 is somehow different but I doubt it.
I've had great success with flex. On some channels I get just flex "A"
reception while on others I get "A" and "C" simultaneously. It looks
like I am getting nearly 100% decoding on flex, but I'll admit that
its kinda hard to judge, but the messages are quite intact.

>Last night I built the 4 Level FSK interface and now
>get some FLEX decodes but only the type 'A'.

I've been very busy and have not had time to construct the new
interface, but will pass on all findings when I do.
I am going to try a 0.02 microfarads cap and a 2 megaohms resistor
like described in the mobitex docs...at least as a starting place..

Been experimenting with the FLEX decoding software
at http://www.geocities.com/CapeCanaveral/Launchpad/4039/.
Its cool, but I want it to work better.

I began by using an ALLINONE 2 Level FSK interface using
a Pro2022 with Discriminator tap. I was getting some
POCSAG decodes and no FLEX. FYI-PD204 gets 100% accuracy
with the same hardware on my Pentium 100.

Last night I built the 4 Level FSK interface and now
get some FLEX decodes but only the type 'A'.
I am using a 0.1uf tantalum cap for "C" and have not installed
any resistor for "R" near U1A.

Can anyone detail how I would select "R and C" to obtain
the "lowest low frequency cutoff possible"? How can I
measure this using common tools like a multimeter,
an RS232 blinky-box and common kitchen appliances?

Anyone had success with other receivers and if so, what
R and C were you using.

All replies in rec.radio.scanner so others can benefit too.

Thanks

Thanks guys!

The key frequencies are 49.830 & 49.875, as a few of you pointed out.
I picked up my transmitter on those freqs, but the reception was
marginal (definitely better than my previous ghost frequencies).

I can definitely believe the reasons of a sub-standard antenna, the
deaf scanner sensitivity of this VHF band, and the tradeoffs between a
high-performance all-purpose scanner vs. a radio tuned to a very
specific frequency.

Lotsa great insight!

Mr. J

Check out this sight http:/auvm.american.edu/~st1418a/federal.htm for a frequency list. I hear the most traffic on 165.7875 or "Baker"channel. While the secret service has DES encription I wonder sometimes if they know how to use it.
I live near Langly AFB in Hampton, VA which is where the president of China landed awhile back to start his tour of America. All secret service communications were in the clear. I knew when he steped off the plane, when he left the base, and they even discussed the route they were taking. I also caught a under cover secret service stake out and bust (they were using 165.7875 simplex). I dont think this speaks well of the secret service, but if you keep listening you may here something good.

Good luck,
Van

>kc6sde@pipeline.com

With poc32 you can feed the audio into your sound card..no need for
any interface at all. Actually, if you have a stereo sound card you
can feed two sources of audio in and decode both at the same time.
If you don't use the discriminator output all you will get are 512
baud pages, not very common around here in my neck of the woods
anymore though. If you are in a rural area you may have better luck.
Tapping the discriminator is pretty basic on most radios, you should
do it..it's well worth it!

The above statement is false. Full membership comes from paying dues,
not from subscribing to QST (which is available separately now,
although that was not always the case) or buying it on the newsstand.

Since this has absolutely nothing to do with scanning, can you guys
drop the rec.radio.scanner and alt.radio.scanner crossposts?

I had one and found the sensitivity to be less any of my other
scanners. I fixed it by returning it! If its still under warranty,
make the sales drones send it to Texas, I've heard they are good
scanners when they work right. I was going to send mine in for repairs
when I found a pro-43 in the pawn shop.

>Steve
>

Its not full coverage from 25-1300mhz, but here you go:

The PRO-37 uses a diode array to tell its microprocessor what model it
is, and thus which frequency bands to allow and what channel spacing
to
use. European and Australian models have full 800 MHz coverage (at an
unknown channel spacing) and a VHF-Mid band (68-88 MHz) rather than a
VHF-Low band (30-54 MHz).

The Canadian and US models differ in the amount of care taken to
reduce
EMI. The Canadian model has additional screening, and one or two other
minor component additions to achieve this. Therefore, if you have the
choice,
the Canadian model is preferable to the US model.

Changing from VHF-Low to VHF-Mid band coverage requires many
component value changes (and realignment of the appropriate RF stage).

Given that the PRO-37 uses SMT technology, it's not worth trying.
(You can change the diode array easily enough, but just don't
expect reasonable performance!)

The only sensible (straightforward) modification is the restoration of
full 800 MHz coverage on Canadian and US models. The ranges restored
appear with a 30kHz channel spacing - which just happens to coincide
with the N. American cellular telephone channel spacing. A remarkable
coincidence.

This works. I have used this procedure to modify my pro37. One note:
there is no reason the remove the logic board. If you have skinny
wire
cutters, you can easily get to the correct diode. This will save you
the trouble of getting the key pad and key lock back together
properly.

PRO-37 MODIFICATIONS

1. Remove the 4 small phillips screws on the back of the unit

2. Remove the battery cover and battery holder from the case. You won't
loose your programming as long as you don't take all day to do this.

3. Remove the two knobs on the top of the case (Volume & Squelch)

4. The case snaps together at the bottom via two molded "hooks" in the back half of the case which fit into two indentations in the front half. These can be snapped apart by applying the right leverage to bend the hooks away from the indentations that they fit into while pulling the case apart. You'll see what I mean when you look at it. You need to be a bit careful in forcing the two halves of the case shell apart. Once you have the snaps at the bottom released, angle up the bottom of the case until the battery separation wall is clear of the internal metal frame, and slide towards the top of the unit. Place the back half of the shell aside.

5. Now you will see the RF board mounted to the metal support frame.

The BNC (antenna) connector leads and the volume control power switch leads are soldered directly to the board. Carefully desolder these 4 connections.

7. There will be a wire from the volume control knob to the PC board that is plugged in. Remove the plug from the RF board (needle nose pliers work)

8. There will also be a similar wire (small shielded) from the squelch control to the RF board which is also plugged in. Remove the plug from the RF board.
(Again Needle Nose Pliers work good here)

9. Remove the 4 threaded hex stand-offs from the RF Board (these hold the RF board to the internal metal frame AND are where the screws that hold the back of the case screw in) Use a nut driver or Needle Nose Pliers.

10. Now the RF board is mostly free. The only thing holding it in is the row of connector pins on its bottom side that plug into the logic board. You will need to pry this board up gently. Be warned that the bottom side of the RF board is just chock full of Very Small surface mounted components. So use something non-metalic and smooth to do the prying with.

11. Set the RF board aside.

12. The Internal Metal support frame is now exposed. there are 3 small phillips

screws holding the metal frame to the bottom Logic board
(actually, these
screws go through the logic board and into the front half of the
case)
2 of the screws are near the top, and 1 is at the bottom of the
metal frame.
Remove these 3 screws.

13. There is a small socketed wire that leads from the small power pc
board
on the metal frame that goes under it and is plugged into the
Logic
board. Lift the metal frame up and remove the power plug from the
PC board. Place the metal frame with the rest of your parts pile.

14. You have the component side of the Logic board exposed now. There
are
2 small phillips screws at the bottom of the PC board (where the
Battery
compartment WAS) Remove them.

15. Once you have the last 2 screws removed the Logic board is free.
The
speaker wires lead from the speaker to the logic board on the
bottom side.
These are soldered in but there is enough play in them to allow
you to
make the mods.

16. On the component side of the PC board you will see lots of nifty
surface
mounted components, a box-like capacitor (used for maintaining the
channel freqs while you change the batteries.. and make
modifications :)
near the edge of the PC board you will see a couple of small
diodes mounted
vertically. These will be labeled on the PC board as D12 and D13.
You will
also see places for two other diodes to be soldered in (labeled
D11 and
D14) but nothing is installed in these.

17. Now carefully clip the lead coming from D13 and bend the
diode away slightly to make a gap between the resulting two pieces
of wire. Clip it near the middle to leave plenty of room to
resolder,in case you ever want to undo the mod.

You have completed the mod for complete 800mhz band coverage.

>what you needed.

The problem is that too often, "pinheads on commission" will sell you everything they possibly can or sell you a $15 item to do the same job as a $2 item.
My local Tandy Corp. RadioShack, has such "great" people working there that unless you come in looking to buy at least a VCR, they don't even want to talk to you, sometimes they just give you a disgusted look and point towards what you want and say "It's over there". One of my friends, went in looking for a phono needle and was told that RadioShack don't have needles anymore, it was too much trouble for the salesgeek to look in the RSU book and help him, and besides, he may miss out on selling someone a cellphone while he looks for that needle (my friend is blind, so the salesjerk would have had to do the looking)

If you want to go to a REAL RadioShack go to a Franchise store! They are usually smaller, the guys aren't on commission, they actually care about helping you out, and as for "training" the owner of my local franchise store was an engineer for Honeywell, the "Assistant Manager" was a broadcast engineer and the part-timer was a video and survellience tech for a casino. They all have pretty much the same story about why they're there, tired of corporate politics, needed more time to be with the family instead of married to work...

3098. Re: 2-way paging/pagers

Newsgroup: rec.radio.scanner
Date: 1998-04-29 00:00:00 UTC
From: unholy@ripco.com
Message-ID: <6i8ab6ktl1@gail.ripco.com>
Source record: 161858

I have a SkyTel 2-Way pager and have been wondering about this too. I have been meaning to go into RatShack and hold my pager up to a freq counter to see what I'm transmitting on, but haven't gotten around to it yet.

I went to the percon database and entered the FCC ID but got nothing back. The pager doesn't have any freqs on the back, just an FCC ID K3N3000 and the model number is ALD175A.

If you startup your pager, then go into the About folder you get a screen with your version, battery, memory info. If you then hit the up on the pad it will take you into some low level info screen that looks something like this:

```
+--------------------+
|v3.87 0403 |
|04/29/1998 17:24:38 |
|T 29 V1.33 X5.0/3.5 |
|F 36 B 0 A1.46/1.40|
+--------------------+
```

Obviously the second line is your date and time.
The third line I'm not sure about. The V prolly stands for Voltage. I think the X is my send/receive power. 5 to send and 3.5 receive. When I first startup the pager, then go into this screen it is usually on 5.0/0 while I'm in basic service, then once in a service area jumps up to a higher number like 5.0/3.5.
The forth line I'm totally guessing on but here goes. The F is always changing. Starts at 0 and goes up in steps of 4 and 8. I thought this may have been the receive buffer, but it is always going, maybe it is some kind of linkbeat it listens for. The B I thought might have been bad packets, it usually stays at 0 and sometimes just jumps to some number (19, 1, 0) I don't think F goes above 124.

Of course this is all pure speculation, I have no idea what these are for. The T might be for tower or signal strength, while I really am not sure about the A.

In the time I have written this, the screen has changed to this:

```
+--------------------+
|v3.87 0403 |
|04/29/1998 17:34:38 |
|T 27 V1.32 X5.0/3.5 |
|F 4 B 0 A1.48/1.38|
+--------------------+
```

3099. Trunk tracker programing Need help please

Newsgroup: rec.radio.scanner
Date: 1998-04-29 00:00:00 UTC
From: stoli126@aol.com
Message-ID: <1998042922481200.SAA23826@ladder01.news.aol.com>
Source record: 161859

I live in Albany, NY and enjoy listening to my new trunk tracker but I am a little
confused and need some help. It shows that Albany Police and Fire Departments have 14 trunking frequencies. I hit the button until I hear 2 beeps and then put in the 14 Channels, at that point I hit search, It searches fine and normally finds the
Albany PD and fire frequencies no problem. However here is the PROBLEM.
I go to bed with it in the Search mode and sometimes wake up in the morning and I am only getting the City of Albany Public Works Department No Police or Fire. I try to fool around and lock out a Control channel but that doesnt work
Then all of a sudden I am hearing the Police and Fire again without having touched anything. Then when I want to hear the Public Works Department only I cant
get to it only the POLICE AND FIRE So needless to say I am very confused.
I would appreciate any help on this via posting to group or calling me on an 800 number that I have. Could someone please get back to me and educate
me if I am doing something wrong or how to properly program this thing.
Many thanks in advance

OK, if I installed some type of computer interface to my scanner, such as Programmit, and I reprogrammed a memory bank, or even the search limits, an average of ten times a day, that would total 3650 times per year. In less than three years, this would exceed 10 000 times. I generally expect my scanners to last longer than that. It is probably unlikely this would ever occur, but still possible.
Why do EEPROMs wear out unlike regular RAM?

The only way you will get cell with that is if he is including a frequency
down converter in the deal.
That is a separate device which hooks between the scanner and the antenna.

Im in a real bind here. My instruction book on how to program this thing is lost! I need to know how to set it to scan and scan. But when I put it on scan, it only stays on one channel. Naturally the Radio Shack stores dont have an instruction book copy handy.
How do I clear a channel? The "manual" button is ok to access a particular frequency, but then it goes crazy and goes scanning some more. I need a tip on how to set a programmed channel and keep it from scanning off into some other place. Please post your reply to this newsgroup as I have an anti-spam reply addy. Thank you very much.

It sounds like the idea would be to listen to the freq where you can hear them, talking or not. Highway patrol cars emit a freq, not dure which one, and you can pick it up when they are around. Like a Bear Tracker Highway Patrol detecting device.

Havent done that. I've got the OPC-478 cable, with the 232-to-TTL level convertor built into the backshell. However, I've read that by reversing tip and ring, you can use the cloning cable to computer control the receiver. Anyone had any luck with this?

Well, I don't know much about scanners (or radios for that matter). However, it occurred to me that the baby monitor might be receiving the "long range" signals from the fact that it is grounded (hence the much of your house wiring is acting as a antenna). If the Baby monitor can be run without the wall adapter (i.e.: on battery) then you can test my theory.

I believe the mod was done by A.R.E. communications. I have one, and is
good from 500kHz upto 2 gigs. Obviously the HF aspect is not as good as
a dedicated HF rx. I version I own also has the TV receiver adaptor as
well.

I ordered from them last year and received the scanner in eight days. There is obviously some kind of problem now. Personally, I would not do business with them at the moment (and I would let them know that I was cancelling the order before they rack up the card). You could also try Multicomm2000 and Nevada UK--both claim to have prices similar to Bandercom. Javiation will charge you considerably more but you can count on them to do as they say when they say they are going to do it.

web page www.AOR.de for more information!!!

I looked for more information and found the following:

The program is only for AOR radios; the "Lite" version is $88; and the
"Standard Plus" version is $350.

At the high-end price--which must be the most expensive scanner control program
ever concocted-- you would think they would include the radio.

I didn't stick around long enough to see if they have a demo. Had to get back
to reality.

Do not connect a straight wired cable from the computers serial port
to the IC-R10. Doing so will cause damage to the R-10. ICOM's use
TTL voltage levels so the cables like the OPC-478 and the CT-17 CI-V
interface have voltage level converters inside.

abellows@broadcst.net "Dr. Bellows" writes:

> In case of emergency where life is in danger, and attempts to reach
> help on ham bands are bringing no response, Hams ARE authorized to use
> any frequencies available.

I believe that's not correct.

Hams are allowed to operate out of compliance with the Part 97
regulations, such as its rules on transmitted power, class and mode
sub-band limits, signal purity, non-interference etc., in order to
provide essential communication needs in connection with the
immediate safety of human life and immediate protection of property
and when normal communication systems are not available.

But when it comes to operating outside the ham bands, I believe that
hams have no more rights than an unlicensed person to do this,
although they certainly might have greater means and knowlege to
achieve it.

The fact is that when it comes to saving human life, most people will
go to *any* lengths, including breach of the law, to achieve that
goal, such as when speeding an injured person to the emergency room.
But if you're then brought to account for your actions, just plea the
emergency circumstances in mitigation and do not try to plea that you
have any particular FCC permission on account of your license.

Claiming you have permission would not be true and I believe that
raising such a false defence will only harm your genuine and best one.

Well, *you* may be, but when I started this thread, I was talking about certification being pulled for out-of-band *RECEIVE*! HR2369 is *NOT* about interference, or "freebanding" -- it is about restricting the right to *LISTEN*. The rigs I think of immediately getting their certification pulled (or the rigs get heavily redesigned) are the FT-50, the VX-1R, and so on.

Again I ask: Is what the 5/98 Monitoring Times back page said correct? Will rigs get certification pulled for being able to tune 900MHz, for example, or is that an overreaction?

Thanks much, and please excuse the exasperation,

Eric, KB0YDN

Blake Bowers (bbowers@townsqr.com) wrote:
: Can you advise where this case was? The case in California about
: 5-6 years ago, the radio WAS confiscated, and the FCC was
: present during the forfiture.

In fact, I'm pretty sure that in the end, the ham got his radio back, and the FCC retracted the half-assed interpretation that led to the confiscation of the radio.

In situations involving imminent threat of loss-of-life, hams (for that matter, anyone with access to a transmitter) are authorized to use that transmitter to seek help via any means available. The letter and spirit of the law had always (up until this case) been quite clear on that. SDSO confiscated the radio under an obscure clause that had been inserted into Reagan-era anti-drug legislation --- in fact, up until this case, I believe even the FCC was more-or-less unaware that the clause was buried in there --- the clause only protected law enforcement freqs.

Common sense would dictate that emergency comms first be attempted on the service you're licensed for - I think that's what people are talking about here - namely, if you have a novice class ticket, first seek help in the general class band before you dial up the local PD. In the SD case, the ham did just that - he only attempted to contact the SO (and then, only on a secondary so as not to interfere with dispatch ops) after attempts to raise help on ham repeaters and simplex failed.

BTW - there were mitigating circumstances nearly as interesting as the original case. A week or so after the confiscation, the officer who made the bust was out hiking (off duty) when he became ill. He used a ham HT to call the SO, and received an airlift off the trail. This incident was considered in the decision to drop the original charges.

You'd be surprised how many non-hams use modified ham equipment for
communications.. I've seen police officers, sheriff deputies, firemen,
volunteer firemen, civil defense weather spotters, and EMT's using ham
equipment for their communications. Some are hams, some are not, but the
fact remains that they do use modified ham equipment on frequencies
other than amateur radio frequencies. Especially volunteer firemen and
weather spotters, if they have to provide their own equipment, it is
usually always modified ham equipment, simply because of price. It's
not legal but hey, ever seen a cop ticket another cop? It simply
doesn't happen. Ever seen a cop obey traffic laws, it simply... never

mind, another story.
As to using any frequencies in an emergency, that is crap, it comes down to how you define Emergency. A few years back, a California ham was hiking in the mountains with some friends. One fell and had a compound fracture of a leg. After trying a cell phone and ham repeaters to no avail, he got on his modified ham HT and managed to contact some sheriff's department. They dispatched emergency equipment and took off with the injured party. They also took off with the radio operator and stuck him in the pokey. The FCC came along and confiscated his HT and levied a fine. I'm not sure how this all played out, but this story was in the ARRL magazine QST. So, any port in a storm is simply not true. I would think a severe compound fracture on a mountain top miles from any medical help would be a true emergency, but the sehriff's department and the FCC apparently wouldn't agree with my assessment. Personally I would do the same thing this person did, because that was the right thing to do.
Here's a law enforcement/ traffic law story that you may/may not find humor in, I didn't. I was driving through a local town a few years back when a Highway Patrol car running hot with no lights or siren passed me at high speed in a 30mph zone. I floored it and clocked him at 65mph and backed off. I saw him turn up the street aways, so I turned there also. Shortly after I spotted him at the Domino's Pizza place. I pulled over and watched. Sure enough, he picked up an EMERGENCY pizza order..

Yes, I use three diferent scanners all from the haedphone jack with near 100% accurate decoding. They are BC-200 XLT, Pro-32, And Pro-62. I always run two at a time, with sound card, both on different freq"s and at different baud's and the POC32 still decodes alphanumeric nearly perfectly.

You just need to connect to the headphone jack. I do it all the time
with two scanners on a split stereo cable to the soundcard line in jack.
Just experiment with vol to get started and be sure you are on active
pager freqs. It will decode nearly perfectly at 500, 1200, and 2400 all
done automatically.

I live in Cary, N.C. I have listened to the police and all
other agencies on the trunked system here for about 3 years now on
Pro-2006.
I have always found it a pain in the ass to have to always hit
the scan button to find the conversation that I want to follow. I
also find it a pain in the ass to have to listen to the PUblic Works
department during the daytime hours and sometimes late especially
since their is the gay man on their who is totally annoying to listen
to.

A friend of mine bought a trunktracker from Uniden and he
showed me how it worked. It sure is nice to be able to block out
unwanted ID's and to only listen to certain ID's that one wants to. I
used to never listen to cary police during the day because of the
public works traffic and the pain it was to CONTINUOUSLY hit the scan
button until it stopped on police traffic.
I bought a trunk tracker last month and since then I have
enjoyed listening to the trunked system here in cary. I never have to
listen to the data channel. In fact the data channel used to change
every day at midnight and I had to lock it out and then go and unlock
the previous data channel just to remain current.
If I only want to listen to main dispatch I can do that. If I
only want to listen to detectives I can do that. If I only want to
listen to FIRE dispatch I can do that. IF I only want to listen to
EMS dispatch I can do that. There are TONS of listening preferences I
can custom taylor the trunk tracker to do now plus I am always aware
of the trunking ID of the traffic I am listening to which sometimes
helps because just following the conversation needs one other bit of

information to tell me what I am listening to. When I put the ID together with the conversation it is only then sometimes that I have figured out what is going on.

What I am gonna do is wait for the price to drop again at a sale and buy a couple more so I can dedicate each one to a specific talk group.

I do have a complaint about the radio shack trunk tracker. The squelch sometimes opens up and is not adjustable while in trunking mode. The backlight time on duration is too short. The speaker audio is excellent. My friend bought the Uniden Trunk Tracker model and his came with a spare battery and a drop in charger. Radio Shacks version of the uniden trunk tracker does not.

So to anwer your question...."What am I missing??"
.....Ignorance Breeds Contempt!!!

I am new to scanners and I'm looking to buy one for Nascar/Indy car races.
These are my needs in a scanner. Your recommendations are much
appreciated. TIA

1. MUST use AA batteries
2. 30 ch. or more
3. One or more Priority channels
4. 406-512 MHz band (my driver is 469.8750)
5. Solid "drunkproof" construction
6. Be able to drive headphones REALLY LOUD!

Thanks
Tracy

I doubt police say their exact position when doing traffic. The only time they
report where they are at is when they pull someone over to give them a ticket.
At least where I live thats how they do it.

No they can't be "opened,", but even if they could what good would it do
you? You would see a whole bunch of letters and numbers fly by so fast that
you wouldn't have a chance to read anything. Remeber that the Advisor has
at best a 4 line LCD display.

Source record: 161944
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have been using the BCT7 for 2 years. Good quality radio, but lacks may features.

Cannot turn off delay in the CHP mode or any other mode (major fault), lack of programability (you only have one bank of 25 channels to yourself - the remainder 75 are mixed in with the polic/weather, etc. It takes too damn long to get to a specific frequency.

Eventhough I have the BCT7 in my car, I use my handheld more often in the car because the BCT7 lacks many important functions. (the buttons DON'T illuminate in the dark).

I've never experimented with the other models, but if I could do it all over again, I'd spend the $200 at radio shack and get their car scanner. It at least allows you to program in what's in your area into banks.

I hope this helps a bit. Good Luck - Howard

3166. BC235XLT vs HS200

Newsgroup: rec.radio.scanner
Date: 1998-04-29 00:00:00 UTC
From: jcarra@xmission.com
Message-ID: <35476ff4.22792227@enews.newsguy.com>
Source record: 161945

I'm going to buy my first scanner and have narrowed the field to these two models.

I've played with a BC235XLT and like it very much but here in Salt Lake there's really nothing interesting going on in the trunked bands - although the county police are rumored to be switching this year. I'm new at this and from what I've found on the internet, I'm concerned that I might be better off to invest in a non-TrunkTracking unit now to see what develops over the next few years.

I've read good reviews of the HS200 at the excellent Strong Signals site and I'd like comments from folks who have used both units, evaluating likes and dislikes independent of the trunk tracking feature. I'm especially interested in how valuable you find the tone squelch feature of the HS200.

My biggest interest is public safety frequencies and sensitivity/selectivity would be at the top of my list of priorities. Build quality and durability are also important.

I'd also appreciate suggestions about which dealers to consider buying from. I'd be willing to pay a few extra bucks if any dealers have a 30 day try-out period.

Thanks much,
Joe

true but it has a better noise figure than a 2N5179 and it
was noticable in this case

> No, there are no known better replacements for the
> 2SC3356. It is pretty hot as it is.

the best choice of components is rarely seen in mass produced items
for pennies more polystyrene or polypropylene caps could have been used
for coupling in the 2006 audio amp but what do we find there?

Radio Shack has a brand new one (just hit some stores at the end of last week)
that will let you program the channels to read out the Car Number when it stops
on the frequency of that car [if you program it right, of course]! It also came
with a tiny tiny little 800 MHZ rubber duck
antenna in addition to the standard one. It migh be worth a look and it is
called a "race' scanner. I didn't read the manual or write down the catalog
number, but it looked like it might be neat for a race fan.

>At least where I live thats how they do it.

The Ohio State Highway Patrolmen near me always report their location to dispatch when the are "stationary". However, listening for this would not be very usefull because they normally sit there for at least 15 minutes befor they begin to use radar again. I assume they are doing paperwork and what not. If you want to "outwit" the speed traps, I would recomend a CB. It is alot more effective for what the original poster wanted to accomplish.

Just my opinion,
John

Dave,

You might consider the ACARS mailing list at QTH.Net
(or the new ACARSLogs list): http://www.qth.net

BTW, there are many, many other mailing lists relating
to scanning and radio there.

Also, see http://www.swl.net for the SWL Web Ring.

I am looking for a mobile scanner with the cell block installed or restored.
A Radio Shack or Uniden would be great, as they are usually much less expensive
than the Professional models. I would prefer to deal with a seller in person,
due to the nature of used radios, (and also a few rotten apples :-(.
I am in the central Massachusetts area, and would be willing to drive anywhere
in central New England to make the purchase.

The FCC has stated that the rules stating any frequencies available
is only applicable to the Amateur Radio service, and that the
statement about any frequencies available only applied to any
HAM frequencies available. IE, a nocode tech, in an emergency,
can use HF Extra frequencies.

>This has allready been the case, in remote areas where repeaters were

Can you advise where this case was? The case in California about
5-6 years ago, the radio WAS confiscated, and the FCC was
present during the forfiture.

Forget it guy!

You need to connect to the discriminator output inside your scanner.

I'll resist the urge to get on your case about this, but in the future please
READ some about a subject before posting such a silly proposition.

If you have any other questions please email me direct at hh357@aol.com.

Using the soundcard from the audio output of a scanner is marginal at best
- by the time you add the distortion in the scanner's speaker & the microphone
I'd be amazed if it did work. You need at the very least a direct connection
from the soundcard line input to the earphone or line out on the scanner.
I have good luck with a PRO-64 and a PRO-2032 at 512 baud & some success
at 1200baud from the earphone outputs, with the level set between 2 and 4
units on the scale. I ahven't run a discriminator tap on the 2032 yet, but plan
to. I have noticed with the PRO-64 that the signal strength is important too -
it may not sound noisy, but getting to close to the monitor loses the decoding.
Good luck.

I have recently begun monitoring ACARS transmissions from Tullamarine Airport (thats Melb. International to you non-victorians!) on 131.550MHz using a Pro-2021 scanner hooked into my PC via the AWE-32 sound card and an excellent program called WACARS.

Does anyone else know of any other ACARS frequencies used in Australia (I think another one is 131.725MHz but I'm not 100% on that).

Also does anyone else know of any other 'data' transmissions that can be rx'd by a scanner into a PC for decoding and what software is available out there to do it?

Thanks in advance...

Cutie Boy you are wrong. Commission rate doesn't increase with sales. The sales person either makes commission, which varies with tenure and training, or the sales person makes the legal minimum. Hopefully you will not have to be waited on by someone that makes the minimum. That person probably doesn't have enough training or just hired on with the company. Percentage of commission is reduced on brand name products, ie: computers. I hope your buying decisions are not based on whether or not the sales person is commissioned but rather on if the sales person was able to help you find what you needed.

Cutie Boy wrote in message <3546561a.3383367@news.total.net>...

My background and qualifications are not subject to your scrutiny
as explained before.

>Also, this is not any sort of competition, so WHY do you use the
>term "vs." (versus)?

Since you have now attempted to make it an adversial relationship,
my choice of words seems appropriate. You have also failed to
answer my question as to whether you are under the care of a mental
health practitioner. Why should I answer your questions if you won't
answer mine?

>Please take any further attacks to e-mail & not make any more spam on

We are talking about why HAMS would be modifying HAM RADIOS to transmit
out-of-band. Not too many NON-HAMS have these radios to modify, so why
even bring this up? Are they going to modify their car stereos?

Think about how SILLY your statement is. The FCC made a statement that
a person should allow human life to die rather than transmit on a
non-ham frequency? If you are going to make up lies, don't say that
they are statements from the FCC!!

Here is a REAL statement from the FCC! from:
http://www.fcc.gov/wtb/amateur/amfaq.html

1. Section 97.403 states that no provision of the rules prevents the use
by an amateur station of ANY means of
radiocommunication at its disposal to provide essential communications
in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.

2. Section 97.405 states that no provision of the rules prevents the use
by an amateur station in distress of ANY means at its
disposal to attract attention, make known its condition and location,
and obtain assistance. A sinking ship is a good example.
It further states that no provision of the rules prevents the use by a
station, in that exceptional circumstance, of ANY means of
radiocommunications at its disposal to assist a station in distress.

Subject: Re: Make Your Own Cable TV Decrambler
From: n5rkn <n5rkn@apex2000.net>

>Let me just add: Go ahead... build your own descrambler. It's a free
>world...right?

First, you missed the point of my reply completely. As anyone who visited the web-site I posted found out, the notch-filter type of circuit that huckster was trying to sell is virtually obsolete. The odds of decoding anything with that circuit are almost nil. The guy who runs the site makes that perfectly clear. My response was an anti-spam response, NOT a pro-theft response.

> However, be forewarned that no matter how many times they tell you that
> "it's totally legal" or "contact your local cable company" (right...like
> you are really going to do that?)

I don't recall reading anything like that, in the origional post, my response, or the website I mentioned.

> WE will still catch you and in some cases, file theft charges against
> you.... IF, we find you watching services that you are NOT ON BILLING
> FOR. Regardless of what these hucksters say.... It's against the law to
> receive cable services and not pay for them... when they are normally a
> pay service that your local cable company charges for. There are SPECIFIC
> laws both Federal and in most states that allow for prosecution in most of
> these cases.

Key words: "in some cases", "allow for prosecution in most of these cases".
^^^^ ^^^^^ ^^^^

> Here's another note... even if we don't file on you, but know that you
> are using equipment to illegally receive our services, we can fix it so
> that your "box" does not receive anything.

I believe that! Especially since cable companies are so good at fixing it so their LEGITIMATE subscribers can't receive anything :-)

> There is no trick that I haven't come across..including the
> infamous black boxes, that I can't fix so they don't work.

If you spent more time fixing your OWN boxes so they DO work, maybe more former subscribers would be sticking around.

> Why do you think your cable bill creeps up from time to time?

In the past, it was pure corporate arrogance and greed. There was a monopoly situation, which allowed the companies and the whores such as

yourself who work for them to take full advantage of it. Recently though, the prices haven't been going up, they've effectively been going down. Cable companies are finally improving their bandwidth and offering more channels on their basic service, and discounting premium services. Cable companies are worried sick about DBS and the reaction of consumers to the former monopolies. Their abandoning you in droves, aren't they? Every day there are customers coming through your office door, dropping off their cable boxes, and telling you to go to hell - they just got a mini-dish with several times the channel choices and video/audio quality that you've been delivering. And this time, the programmers that supported you in your smear campaign against the big dishes are working against you. Their having the municipal statutes that were enacted by the bribed municipal politicians restricting outside antennas overturned, aren't they? Their doing this so they can bypass the middle man (YOU) aren't they? Hey, how does it feel to have the same corrupt legal/political system that you supported in your campaign against free choice with the big dish turned against you now?

>> Receiving any service that a cable company charges
>> for....without paying for the service... is indeed... PIRACY!

Actually, the proper term is "theft of service". The word "piracy" will impress no one in a court of law - It's just one of the catch phrases the cable cartel has chosen which has backfired and romanticized the whole thing. I can just see some corporate hack lawyer standing in front of a judge saying "Your Honor, we charge the defendant with an act of piracy." Yeah right! You can't sail on RF waves, stupid!

> Does the cable company overlook this? Not entirely. Though some
> companies may not have a full time audit & theft position, they still
> respond to any threat of piracy. Some companies have excellent and full
> time (24hrs) audits.

Their usual response is to quietly threaten the subscriber (who is probably ignorant of his rights) with legal action, and encourage him to begin paying for the service. They might not like theft of service, but they like loosing a paying customer even less!

> One more note: IGNORANCE is no excuse in the eyes of a court! You can
> exclaim all you want that "I didn't connect it", "I didn't know it was
> against the law", "it was on when I moved in"...etc, etc. It doesn't hold
> water in a well built case.
^^^^^^^^^^^^^^^^^^^^
"In a well built case" is the key phrase here. There's more to a successful prosecution than showing the equipment in court. You have to prove it was in use, and you have to prove intent. That the subscriber KNEW the equipment was installed, and that he was receiving extended service without payment. You also have to show that you obtained the equipment from the user legally, with full respect to his rights.

> Just thought I'd post, as I get real tired of seeing these bulletins
> about cable converters, and most electronic magazines carry them also.

Well, IF you're such an industry genius, then you should know that it's
not the "cable converters" that are illegal, but the use of DESCRAMBLERS.
A small point, but so's the one on your head.

> Hey, guess what? Do you know that the Feds bust dozens of these
> individuals and companies on a yearly basis. Know something else? Quite
> often, these bozos have records of their sales. Guess what? The feds
> pass those along to the local companies that were affected by sales to
> their areas. And, the final insult to you... the buyer... we follow up!!

So what? I don't sell descramblers, and I couldn't care less about them
being charged. I'm not a "buyer" either, and I never will be, because I
wouldn't take your shit service if it was free.

Hello. I am in need of 2 full size VHF rubber duck antennas for a couple of recently acquired HT's. One has a stubby duck (which works about as well as a dummy load) and the other has none at all. If you have a couple in good shape with standard BNC connectors please email me with your asking price. Thanks in advance.

Absolutely,

Some company in eNgland, I don't recall who however....made/makes an internal S/W converter for the 7100 that does tie into the receiver's logic to allow you to use the dial (or memories!) to tune below 25 MHz....Drop me a private line to remind me, and I'll look up who it is. I bought one but never installed it.

Yup. I don't have any premium channels because I've spent money on high-end equipment and I think it's idiotic to have to use a cable box instead of my 1-month 64-event VCR's tuner, not to mention assorted RF->baseband->descrambler->RF perversions done with "cheapest bid" components, assembled and "aligned" by people who wouldn't know a proper video waveform if they were hit over the head with a 'scope.

I had hoped that the revamping of regulations pertaining to cable TV would have required cable companies to allow customers to buy their own descramblers (registering the serial number and paying for service, of course) - that way some high-end audio/video companies might get into the marketplace with a quality product. But (as usual) mediocrity wins.

> > Why do you think your cable bill creeps up from time to time?
>
> In the past, it was pure corporate arrogance and greed. There was a
> monopoly situation, which allowed the companies and the whores such as
> yourself who work for them to take full advantage of it. Recently though,

Not here. Comcast of Jersey City split basic cable into 2 pieces, the mandated "must carry" channels and the basic cable channels like TLC. Of course, they called it a "packaging realignment with no rate increase". The next month, the rate for the basic cable channels went up by about 2 bucks.

Of course, Comcast can't even record a decent local promo spot (bleed-over, over-saturation, etc.) - they can't even balance the audio level!

However, if you want to see really greedy bastards at work, you should look at the company that "serves" Queens, NY. Despite regulations that say that additional outlets must be free, that company scrambles the local broadcast (must-carry) channels - the only things you can see un-scrambled are the community access channel and the cable company's ad-vertising channel. Of course, they will gladly "provide" you with a descrambler, for only $9.95/month/outlet - for basic service!

> Cable companies are finally improving their bandwidth and offering more
> channels on their basic service, and discounting premium services. Cable
> companies are worried sick about DBS and the reaction of consumers to
> the former monopolies. Their abandoning you in droves, aren't they?

It will be interesting to see how the cable outfits cope with the bandwidth increase needed for HDTV. Have you written your letter to the FCC urging them to *not* let cable companies "downconvert" HDTV to save bandwidth? I have.

> Every day there are customers coming through your office door, dropping
> off their cable boxes, and telling you to go to hell - they just got
> a mini-dish with several times the channel choices and video/audio
> quality that you've been delivering.

Likewise, write to the FCC and ask why the DBS outfits are only allowed to provide network channels to customers who "cannot receive over-the-air signals and have not had cable service in the last 90 days". Tell the FCC you want to let the market determine what viewers can watch, not the cable and broadcast interests.

> "In a well built case" is the key phrase here. There's more to a successful

Everybody who only has basic cable should turn their TV's to HBO (or some other premium service) when they're not watching TV - that will drive the detector operators crazy 8-)

I argee with ya....it is sure hard to keep up that far away Jim...may I suggest a 29,95 (Canadian Price ...which is about 5 Bux US hehe :)

See if you can get an RF amp from RADIO SHACK...it will Boost signals for your TV , but after I read the face plate it said 50 MHz to 950 MHz with a 30 db gain.

I bought this amp , and Whoola....adjustable gain....I too live far away from the good stuff...hope this helps ya...its a cheap method of an amp!

Worked for me..! :)

I am looking to buy either the Radio Shack Trunktracker $219.99 or the Uniden 235XLT trunktracker $229.90. Has anyone tried either, I'd love to hear comments.

Pay the extra $10 and get the Uniden. You will get an extra battery and a charger stand for the extra battery. Well worth $10. I have the Uniden and love it. The only bad thing I have heard is that the pin will break off the antenna and you will have to buy a different antenna. This was on the early production models and may be out of the system by now. Just be prepared. I junked mine for a better antenna when I got the scanner so I didn't have that problem.

Yes, if you want to pay hundreds or even thousands.....
Check out Universal Radio for starters......

Otherwise, make your own decoder interface board
and go for shareware or freeware software to keep
the price down to a few bucks and the performance
up there on a par with the "good stuff".

>a whole lot more.

In Nebraska, the BTC-7 is programmed to alert not only when the mobile extender transmits, but also when the officer transmits on the mobile frequency. I assume it would be set up the same way for other states. Even it the extender is turned off, it will alert when the OFFICER transmits. Then if the mobile extender is turned on, it alerts if the officer or the base transmits.

The infrared remote add-on with the PROgramit isn't really for
programming the scanner (well not yet anyways). It is mainly for
controlling your scanner via a remote control like the multifunction
remote that comes with TVs/VCRs. It can allow you to control the
volume and everything that you can normally use the scanner's front
panel for...yes, technically you can program the scanner. There is a
RF module that John Montalbano is working on that will do what Michael
Alexander is speaking of. It will allow programming the scanner from
100-200 feet away. That is still in the workings...but will soon be a
very viable option.
The Pro-2041 seems to be a nice scanner for what you are
asking. It can easily be programmed with the computer...very quickly
also. There may also be the possibility that it can benefit from the
same RF TX/RX modules that John Montalbano is working on. Just plug
the module into the scanner, run up and start the computer programming
the scanner and the scanner could be programmed before you get back
down to your vehicle.

>"I've been trying to get a message across the airwaves to you"

You can have a s-meter on a Pro-2042 by several methods. One is if you have a OptoScan OS535 installed, then software such as Probe, etc. will have a reading on the computer screen. Also you can pick up Bill Cheek's book, THE ULTIMATE SCANNER and follow them plans for installing one on a Pro-2035, etc. The same hook-up point is the same for the Pro-2035/2042 and Pro-43, etc. The part names/numbers have been changed though...but technically are the same. Bill also posts a S-Meter document to these newsgroups once in a while. You should be able to find it either through http://www.dejanews.com or at his website. You might need the service manual for easier hookup and parts placement.

Source record: 161773

Well, gee Alan (VE3NNM)... I did try to reply to you directly & not go through the group. But, evidently you are afraid of spam & "flaming arrows" coming back to your real email address. So, here I am.... and my email has always been correct. Would you prefer to take this "off-air"?
Yea... and I'm tired also of "techno-geeks" who think they know everything. I don't by a long shot. But, you've already tried to impress the group of that fact. I suspect it relates to a poor childhood (grin). That is...if we "must" get into name calling. As, I don't take nicely to being told that I'm full of crap and don't know what I'm talking about. Perhaps the cable companies in your area are idiots. That doesn't mean they all are.
Oh... and good! You do know what a TDR is... I'm almost impressed. And, gee.. you have an inkling of an IF freq is... almost impressed again. But, then perhaps that's because you are possibly a ham? Many hams I know think they know everything also.
If you would like to reply directly, then I will reply more specifically to your comments in your posting.
From my time in service, I will agree to one thing: there are a lot of idiots parading around as cable techs. But, there are also a few good techs out there. Unfortunately, not enough to go around.
I don't claim expertise in the technical field...never have. What I claim is expertise within my realm of theft detection... and only within 3 different companies here in Texas.
Now, either reply direct..or forget posting. I seldom check into the boards with exception of some MS program related ones. I seldom take take the time to do what I've been doing...and that is to post a msg. I usually just chuckle and move on.
I check the scanner postings only because I've been a scanner buff for 25-30 years and have published several listings for regions in Texas over the years.

Lower the setting on the SB and Lower the volume. Like I mentioned in the
email, 4 bars for 1200 and 3 for 512 produces 100% copy. Although the
filtering on the radio could quite possibly narrower then that of a general
purpose scanner, thus produce more errors.

No bs. First I have to say, that I think the frequency that I've listened to the most has no 2400bps information on it based on the fact that I havent seen one single transmission marked as such. But, upon each transmission from the tower, i do receive either a valid 512bps or 1200bps data set. These are 100% credible, seeing they are either control, numeric or alphanumeric data sets.

I have not tapped the discriminator, and am using a Pro43 handheld from the headphone jack. I keep the levels low as the faq suggests and am quite pleased with the performance. When the levels are adjusted correctly, I decode both of the only 2 sets of transmissions on the frequency.

Yeah, theres a good answer of no value. Get a clue, the speed limits have nothing to do with safety and everything to do with revenue. If you drive the freeways of America you need something to detect speed traps. There is hope, some states have come to their senses and passed reasonable speed laws (Montana). In fact, states that raised the limits had lower death rates that those that kept the old 55/65 limits. So much for speed kills.

Why not just obey the posted speed limit, and thereby not give
the LEO an excuse to hassle you ? Unless, your just interested
in listening in on them busting the speeders who feel they happen
to be above the law.

3240. please recommend a good scanner for a beginner

Hi all,
Im thinking of purchasing a scanner an was hoping someone could suggest a decent model. I am willing to spend upto 200 dollars. Is there any benefit to having a base model compared to a portable? I could go for either. Also one that could be modified to cover the cellular range.Please email me at ssaeed@scorpio.kent.edu. Thanks. Salman

If you have the KPC3 in terminal mode (hooked to your computer via
a serial cable) Just type:

INT KISS
(after changing the INT mode, you have to do a soft reset
for the new mode to take effect) Just type RESET

Tot Ziens!

You don't always need to use the discriminator output. I have a 1/8" stereo cable from my 3000XLT to my Soundcard (Creative AWE64), and POC32 works great. You need to fiddle with the scanner volume & the Soundcard input levels, but I decode soooo many pages I can't believe I'm missing something by not using the discriminator output!

Hello,

Anyone got any military air freqs for McEntire ANG base (Eastover, SC), Shaw AFB (Sumter, SC), and the Poinsetta (sp) range? I've tried the misc. freqs I've found on the web with no sucess. Also, any pointers for finding them is appreciated. I'm using a BC890XLT.

BTW, I have no problem picking up the surrounding civilian aviation freqs.

TIA!

Source record: 161793

Near Mint Condition, with the box and all accessories.

This is a mobile scanner intended for finding Highway Patrol cars by
detecting their walkie talkie system. It sounds an alarm like a radar
detector, when one is nearby.
It can also be used for regular scanning, and has many preset frequencies
for each State in the country. It has a transformer for base use.

$90 plus shipping from San Jose, CA Shipping should be around $6 unless
you want insurance or Fed-X...

Well the air show is now here in South Florida..at least it will be in
two more days, but they are practicing for it now. I've set my trusty
opto456 up to log the freq's and so far I've positively confirmed:
The Blue Angles (practicing) on 275.350
Also active were 345.9 and 257.8 today, didn't really get a chance to
give them much of a listen but I'm sure they are airshow related since

I never hear anything in the mil airband..I've had the opto going for
the past week with not one hit until today, anyway I'll post the
complete list when the show is over

ok people here is the deal.
Mutual Aid, inter department go along to get along.

My City made the office space availble to the Area ham club to take care
of the need for civil defense, The mutual aid contract points out the
fact the freq's we are lawfully cleared to use (HINT PD/FD/EMS)
with the consent of the primary tickit holder, (also know as local
goverment)

I am employed by one state division, and I am I HAM,and a volunteer fireman
PLUS in the past , I worked with Civil Air Patrol , and soon MARS
not to forget off shore Radio Operator (3 ELE) (WPEK 875) (KD5DGS)
I am covered by more than one set of rules,
MUTUAL AID with your local goverment is planing ahead, so when you do need
to
call the PD dispatch, life is good, and you are serving the goverment,
who otherwise might cause you large greif

I have been in the game since... 1972

so by planing ahead, you have the FCC tickits for fire / Police S.O.
all by the book, all letter of the law.

Which still leaves the question why, or how did the FCC get the IDEA to TYPE
APPROVE radios anyway

Doesn't it seem a little funny that in a "free" society one has to have a permit to listen to a radio?
It is time to face the fact that we are no longer free.
It is becoming obvious that every group is feeling the pinch.
It is time IMHO for all people who are feeling the noose tighten arounf their necks to stand together.
It is time for people who support freedom in their hobby support other people in their hobbies, too.
If Hams, scannists, shooters, smokers, street machiners, etc. etc. etc. all stuck together, and supported each other when voting, maybe, just maybe we could work to build a free society again. If you think I am wrong, then ask yourself this...just how long do you think it will be before they pass a law making listening to police frequencies illegal? After that, fire frequencies, after that, business band, after that who knows?
The logic used to take away shooters rights was "who needs a gun like that?" next it was "who needs to listen to cell phones?" next it will be "who needs to listen to anything on a scanner?" Then, when it is almost over, they will be saying "who needs to read a paper, or listen to the press?"
Hobbyists are being picked off one by one. No one group can stand on its own.
It is time to pull together.
I don't smoke, but I support smokers rights.
I don't own an "assault rifle", but i support the rights of those who do.
I no longer own a street machine, but I still support those who do.
etc. etc.

It could be 1 of 2 things.

1. Cold solder joint you need to resolder the jack
2. The jack is broken and needs to be replaced order one from Uniden

Hope you have a soldering iron.

GOOD LUCK, Eric.

As far as POC32 is concerned this is a bit like trying to make a hi-fi
recording of someone's conversation from the opposite side of a busy
sports stadium. It just will not work.

You absolutely have to have a direct electrical connection from your
receiver to your sound card and, in most cases, the connection on the
radio end has to be taken from a specific point in the receiver
circuitry (discriminator output) and not just from the earphone socket.

Who can help me?

I`m looking voor a program for the KPC-3 to put it in KISS mode.
can anyone tell me where i can find it? or can anyone send it to me.

73`s!

This might sound obvious and prove ineffectual, but have you considered simply asking your local PS agency if they might sell or give you a radio capable of receiving certain frequencies? If they agree, you might pay a lot for the unit, but I have no idea how much you want to continue monitoring your local officials at work.

Visit http://members.aol.com/truth4000/page1.htm for the philosophy behind this approach.

They sure WOULD! Go to the FCC website yourself and check out part 97
rules!

ï¿½97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any
means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human
life and immediate protection of property when normal communication
systems are not available.

ï¿½97.405 Station in distress.
a.No provision of these rules prevents the use by an amateur station
in distress of any means at its disposal to attract attention, make
known its condition and location, and obtain assistance.

b.No provision of these rules prevents the use by a station, in the
exceptional circumstances described in paragraph (a), of any
means of radiocommunications at its disposal to assist a station in
distress.

Of course, you could always be one of those people that interprets "the
right to bear arms" as: Guns without a government permit is illegal.

The defination of an emergency is not the issue, what is at
issue is what can be done after that emergency has been
declared.

This instance, which you already mistakenly called me a liar
about, showed exactly what the FCC felt about the situation. They
had no problem with that radio being confiscated.

When you are an attorney, or better yet a FCC person assigned to
interpet those rules, then you will see that there can be different
interpetations of those rules.

The FCC has decided to interpet them differently than yourself. If
you care to challenge them, fine, go out and get YOUR ht confiscated.
You can pay the legal fees to get your education, but don't set
others up to learn that way!

Don't tell others that it is OK to do something contrary to the
interpitation that the FCC uses of THEIR rules!

Interpetation of the rules is what counts, by the people
responsible for that interpetation. Your interpetation, with
the limited view you have, only counts to yourself.

Have you considered the simply possibility that the morning hours are
usually pretty sparse as far as public safety radio traffic goes?

> I try to fool around and lock out a Control channel but that doesnt work

No need to do that. The TrunkTrackers handle this under the covers. You
only have to mess with it in conventional mode(trunking off).

> Then all of a sudden I am hearing the Police and Fire again without having
> touched anything.

Sounds like either you are not understanding a concept of your radio
or your radio is operating improperly and needs to be serviced or
swapped for a new unit. Something here just doesn't "add up".

> Then when I want to hear the Public Works Department only I cant
> get to it only the POLICE AND FIRE

In search mode(that you mentioned above), you can't "get it" to
listen to only one service, for the most part. You could only do
this is you took the time to look at all the ids for all other
agencies and just left those for the desired agency unlocked.

Search mode is designed to listen to ANY active id on the system.
Regardless of who is using that id.

Do you have a list of all the trunking ids for your system? If
so, have you tried programming them into the scan lists and going
into scan mode to control which traffic you do and don't hear?

Joe,
If you are looking for just programmability via computer interface,
then try and locate a Radio Shack PRO-64. They are currently
discontinued
and selling for $150 I believe. Check out my PRO-64 page for some
more info : http://www.qsl.net/n2mca/PRO-64.HTM
There are plenty of details on how to make your own cable for
interfacing from the serial port as well as many freeware programs
available on the web.
For your car setup, you can work on putting in some form of hanger
to secure your radio, tapping off the car power supply(which you might
need to filter to clean up RFI) and adding an amplified speaker to
hear it easily. After that, you might want to consider adding an
external antenna for better reception.
This should allow you to move the radio around at ease and meet
your computing goals for easy programmability for travel purposes.
Good luck!

>I am looking for recommendations on scanners that can be easily mounted in a car, or taken out and used as a home-style scanner.

Well there are handhelds such as the AOR8000 that have 1000 channels and can be autoprogrammed via a PC. You're looking at spending between $425-$600 for the scanner; $100-$125 for the interface and $0-$125 for software.

The PRO2041 might be a good choice for a base unit. It's small, has 400 channels and can be autoprogrammed. In fact, several other Radio Shack base models and handhelds can accommodate the Programit interface that enables you to autoprogram them quickly. The interface is about $20 worth of parts and $12 for the shareware. There's even an infared remote add-on that enables you to program the scanner, perhaps without having to take it out of the car!

Another alternative would be the BC895XLT, although its a bit large to use in an auto.

Scott,
With over 12 manufacturers making over 70 models, you are bound to
get
plenty of recommendations. So what exactly is your definition of "all
purpose"? To most, that will mean a radio which can do just about
everything. That means big $. For handhelds, you're talking around $500.
For base models, it's about $2000. Is this what you mean?
For more info, try my Picking A Scanner/Receiver web page

http://www.qsl.net/n2mca/PICKRECV.HTM

Use it as a homework excercise and see if you can narrow down
your selection to a few models in the same "class". Once done, you
can work on the individual merits and shortcomings of each radio
allowing you to choose the one that will be right for you.
Best of luck and feel free to e-mail me at the Reply To address!

I live in a third floor condo and have installed a radio shack a small $17.99 radial antenna for my BC895XLT and have fixtured it to the ceiling of my loft right in front of a big window. The performance of the antenna is pretty good especially. My only concern is do I need to ground this antenna for lightning protection. ? Also would I get even a better signal if the window is open?

Thanks Chris

Good Idea!

However...I have a wreb site located at http://members.xoom.com/ontscan/
with a file archive...while not huge...I have gathered some very nice
programs...one that comes to mind while reading this neat post is the
dtmf.zip...decodes all DTMF tones...even extended tones (the A B C D) and
even does a CTCSS FINDER...all in realtime....best of all its Freeware...even
a MDT decoder....and more....again Freeware....

FRQ's listes of the RCMP...the massive Ontario Provincial Police SYstem with
FRQ's....new 900 MHz Phone FRQ's....even CSIS FRQ's...(if ya know what CSIS
is...;)

Now all of this is on my web page http://members.xoom.com/ontscan/

Do drop by its free....if you have a page...pls let me know...would like to
link with ya !

again...good post!

P.S. The above software runs using the Sound Card.... :) no TNC..no RS-232
Ports to muck with....

73 !

I can't speak for any hacking, but programming:

I used Delphi for FreeTracker (www.AutoWinNet.com/freetrack.html)
But unfortunately, there's no COMM unit built into it. You gotta buy
an extra component.

I would strongly recommend Visual Basic. Simple, easy to learn and
comes with a COMM unit. Borland C has a much higher learning curve.

>1. computer control of the Icom R-7000 (I know this has been done, but I am not

Does anybody have a list or know of a web page with New Orleans freqs. I will actually be moving just west of the city (Metarie). Thanks.

Mr. Mackey, why are you attempting to start the flames again? Mr. Cheek has not responded to any of your posts, yet here you are attempting to provoke him into responding to you! WHY can't you stop flaming? If you care about making this group better, please be part of the solution and not the problem!!

Mr. Mackey you are the **only** one who is either flaming or posting off the subject! Please stop it now!!! Let's get to the topic of scanning shall we?

> times more.

I think the other fella mentioned that one would have to programme the same function (say scan delay on/off) 10,000 times. In actuality, many (if not all) E2PROM/Flash ROMs programme in blocks or chunks. In other words, I suspect that every time you change any one function you are programming 256+ new memory locations. It's easy to see that the 10,000 will come up earlier than expected. But this is an absolute minimum spec and in practice, like you say, you'll get a lot more life out of it!

I have both the PRO-64 and PRO-2041. You could use the 64 and add the cassette tape accessory with a mono-to-stereo adaptor ($2) and listen thru your car stereo.

I purchased a second 2041 a few weeks ago (I already have one on my computer desk) and mounted it on the center console between the two front seats. I got a mouse pad and matching wrist support, cut the wrist support in hailf with a razor blase, stacked the two halves on top of the mouse pad (at one edge of the mouse pad) and held them together with glue. This cushions the 2041 and angles the front up toward the driver's side. It is held in place with a velcro strap (office supply store) over the top of the radio, under the lid on the center console. I found a small black flashlight for $8 at Walmart, the head swivels...I mounted this with a small piece of velcro to the top of the 2041, just above the keypad. That way I can tun on the flashlight and have a home-made "lighted kepad". The radio is easily removed but just unzipping the velcro strip. I am using the Radio Shack mag mount antenna ($30).

The 64 and 2041 are on clearance sale from $300 to $150. It will be hard to find more bang for the buck. Try one, and if you don't like it, you have 30 days to return it.

See link for instructions on how to build the PC interface cable with 3 parts from RS ($8), and various programs for programming the scanner. Download and try 'em all and stick with the one that works best for you. All have doc files with helpful tips and info.

I have even figured out how to program the 64/2041 using a PDA (little handheld "computer")...very portable and mobile...you can easily reprogram city to city, state to state.

3293. Free Tracker question & Tip

Newsgroup: rec.radio.scanner
Date: 1998-04-30 00:00:00 UTC
From: Chris <**e@connix.com>
Message-ID: <3548962E.17279D3E@connix.com>
Source record: 161835
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Question:

When I am done entering all my frequencies into my databases how do I get these
frequencies entered (programmed) into my scanner so I can use these frequencies while away from my computer? I don't want to have to enter all the numbers again.

Tip for creating new database:

It is tricky creating a new database and enetring frequencies because the program makes you enter info in all fields but doesn't make you enter all fields in the data bases that come with the program. I notice each data base consists of 3 related files.
So I edited (cleaned out) one of the pre-setup data bases and copied it (3 files) into a seperate directory. So every time I create a new data base, I just rename the 3 files to the name I want and copy back into the free-tracker directory. Now I can add frequencies without having to fill all fields.

10 channel programmable minimum. Don't need more than 20 channels, but
will consider it if price is right.
E-mail me with shipped price to zip code 25427, condition, included
things, etc.
I buy broken scannners of all types also, by the way.
Thanks.

> Can you add a S-meter to a PRO 2042?

Certainly.

> Does RS sell them?

No.

> Do you know the cat. no.?

There is none.

> Approximte price?

Retrofit your own for anywhere from a couple
of bucks, depending on what's in your junk box,
to maybe $10-$15 if you go from scratch.

> Are they worth it?

Depends on if you know how to use an S-Meter to
advantage.

Scanner signals typically achieve full quieting
(no static) in the receiver with inputs as low as
1-microvolt....a very weak signal. Thus, the ear
can't detect much difference between a weak and a
strong signal. It takes an S-meter to do that.

Likewise, and for the same reasons, it is very
difficult to tell the qualitative differences between
things a scannist does at his monitoring post.

Ferinstance, you could swap out antennas and not
really be able to tell which is the better and worse.
You can "tweak" the receiver and not know if you
did any good or harm. Replace the coax cable and
connectors and not know if you improved or degraded
anything.

An S-Meter lets you see even the most subtle differences.
So yes.....in the right hands, an S-Meter is "worth it".
But you don't traipse down to Radio Shack and buy one.

See my article posted today, S-METERS FOR MANY SCANNERS.

Could be. I dunno. There are several kinds of EEPROMs and
I suspect they all have their differences. Some of those
differences could well be minor or subtle and others could
be major. We probably shouldn't speculate..... :-)

> It's easy to see that the 10,000 will come up earlier than expected.
> But this is an absolute minimum spec and in practice, like you say,
> you'll get a lot more life out of it!

No doubt. The BC-200XLT is pretty old now and I still haven't
seen anyone hollering about inability to program it or it to not
retain memory contents.

> > The more succinct question is WHO has ever known their
> > scanner to have a ruptured memory?

> I've seen it. Particularly in commercial radios outfitted with
> aftermarket trunking and IMTS modules. But....

But those aren't scanners. And one wonders just what WAS
designed in there..... Hey, you remember the "NVRAM" in
the modems of yesteryear? Those puppies had definite
limitations to the number of times they could be programmed.
I wonder if those radios you mentioned had this "NVRAM"?
No scanners do as far as I am aware.....

Now just what is NVRAM? All I know is that it stands for
"Non Volatile RAM", which *could* mean EEPROM, but I think
it was/is an early type, to say the least. I recall some old
modem specs saying that the User Profiles could be re-programmed
upwards of "hundreds of times"....and I recall some being

substantially less. The mfgrs where very careful to not use the acronym, EEPROM. Instead, they used NVRAM....and whatever it was, certainly had a limited lifetime..... much less than EEPROMs of this era.

Ask around your crowd and see if anyone remembers this NVRAM. I'll bet those radios you mentioned used something closer to NVRAM than EEPROM as we now know it.

Toodle-looo....cheerio! Don't let the turkeys get you down.

: back, but it was NOT returned.

Thanks for the correction - I was relying on a memory that just isn't
so reliable any more 8*(

I know I'm correct that he wouldn't have been popped had it not been
for a clause stuck into some reagan-era legislation - am I also
correct about the FCC backing out of the case (I'm pretty sure I am)?
In that event, the apparently permanent forfeiture resulted from
intransigence on the SO's part...

: >BTW - there were mitigating circumstances nearly as interesting as the
: >original case. A week or so after the confiscation, the officer who
: >made the bust was out hiking (off duty) when he became ill. He used a
: >ham HT to call the SO, and received an airlift off the trail. This
: >incident was considered in the decision to drop the original charges.

: Almost. The ADMINISTRATOR that was dealing with the situation
: used a ISSUED COMMERCIAL radio to call the SO. The point was
: raised that he was NOT a sworn officer, so what made him so
: privilaged as to have access to the SO frequencies.

That makes more sense than what I recall reading... Most of the info
I had came from Westlink/Newsline and the ARRL letter - I think
archives are available for both (does anyone remember roughly when this
occured? Clearly I need to refresh *my* memory 8*))

>mobile extender,

In Ohio the Mobile extender is ON any time the car is
running!

Most people do not grasp that the extender has to be in use
for the bear tracker to work and you have to be fairly close
to the car with the extender (five miles or so)

The upside to this is.... the extender is in USE any time
someone is talking (base or mobile)... unfortunatley....
a) not all cars have mobile extenders and
b) they do not talk all the time.

Have a BCT-7 and a BCT-12 in my car (the BCT-7 is a dual
conversion radio and sets off, everytime a HAM repeater in
this area KEYS up..... the BCT-12 (triple conversion)
does not go off unless there is really a true signal.
I highly recommend the BCT-12

>Cannot turn off delay in the CHP mode or any other mode (major fault),

Not sure what your refering to here.....

>lack of programability (you only have one bank of 25 channels to
>yourself - the remainder 75 are mixed in with the polic/weather, etc.

How many frequencies do you want to listen to that aren't
in the Police // Hiway Patrol pre-programmed data base?

The nice part is..... I can program CB channel 9 or 19
in to the HP data base user channels (25) and monitor them
also as I'm listening to the HP (suggest you keep the squelch
up a little higher..... gabby truck drivers will lock it on the
channel)

>Eventhough I have the BCT7 in my car, I use my handheld more often in
>the car because the BCT7 lacks many important functions. (the buttons
>DON'T illuminate in the dark).

You shouldn't be programming your scanner in the dark
while driving anyway ..... program it.... set it ... forget it!

>I've never experimented with the other models,

I have..... the BCT-10 ..... well lets just say I got rid of
mine for lake of usefulness. The BCT-12 has the BEST
"BEAR TRACKING or CHiPs" detection of all three
I highly recommend this unit for that purpose.

> ground this antenna for lightning protection. ?

No, grounding really isn't "protection" in the
purest sense, but in your case, it's even more moot.
You CAN do it if you want to...without any harm, but
I see no advantage in particular.

> Also would I get even a better signal if the window is open?

No. All the signals capable of being received by the
BC-895XLT are impervious to glass...even less so than
light. The window would only let in fresh air...which
might be an advantage if someone ate boiled eggs, pizza,
and drank beer the night before.....

:-)

ROFL :)

Then like I said opening the window would be an advantage :)

No doubt Jim, a permanent mount antenna will provide you with a minimum of 3 to 8db gain over a quaterwave stick. Don't forget to match the antenna to the specific frequency you will be monitoring. Also consider a high-gain preamplifier to boost your weak signals to a full quiet copy.

Have fun and remember to feed your mind!

You should probably go with the PRO-90 since it has more
channels and is currently on sale for $30 cheaper than
the PRO-91.

However, the PRO-91 does use 4AAs of your choice; better
than being forced to use the ni-cad on the PRO-90.

Both radios are made by Uniden for Radio Shack. Both scan and search
quite fast so no problem there. As far as programming, they follow
the typical Uniden procedures but with TrunkTracking, you're talking
a whole new ball game. The radio can scan, search or be programmed
in either conventional or trunking mode which is going to be an
added difficulty. If you want to put in a custom fleet map for an
agency...I don't even want to go there.

If you want to use it as a conventional radio, it should operate very
similar to your BC200. But for TrunkTracking, you might want to get
someone to program it for you and then you simply worry about using
it in either conventional or trunked mode.

Best of luck!

Strong signals,

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)

group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 813-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
For more information about old scanners, see:

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated March 31, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized ham-fest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facil-ities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1997 - RELM MS-200 mobile
Apr 1997 - RCA RP-6150 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong,

causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring

Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by

reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature

identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual

band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner

with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes

on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked

systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Model	#chan-nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

The PRO-32 handheld is an electronic clone of the
base PRO-2021; e.g., very old, very slow, very
limited, very outdated, and worth very little.
I should think you'd not pay more than about $25
for it, if it is in near-pristine condition; less
otherwise.

The PRO-32 is functional and serviceable, for sure,
but it holds no collector's value of which I am
aware and it must be considered non-repairable,
should anything happen to it. Tandy stopped supporting
it with spare parts long ago.

It was a premier scanner in its day. But this is
no its day any longer, so figure that into the
equation of value.

> occur, but still possible.

Possible, perhaps. But the "10,000" spec is guaranteed.
The nominal spec is much more than that, typically ten
times more.

> Why do EEPROMs wear out unlike regular RAM?

That gets down into the chemistry and physics of EEPROM
construction and is largely incomprehensible to this
audience. It also varies with the exact type of EEPROM.

The more succinct question is WHO has ever known their
scanner to have a ruptured memory? I doubt you'll find
anyone. Of course, computer-controlled scanners are a
relatively new concept, and in the case of ProGrammit and
the CE-232 Scanner/Computer Interface, they are retrofit
modifications that do not figure into the mfgr's specs.
Still.....I've never heard of a scanner's EEPROM going
south. The Uniden BC-200XLT is one of the oldest EEPROM-
based scanners and none have failed in the memory department
of which I am aware.

Soooooo.....your concerns, while legitimate, are kind of
way out there, if you know what I mean. But in worse case,
you just replace the EEPROM(s) and go right on trucking,
I guess. Or pitch the scanner and get a new one.

But try to find out if anyone else has experienced an
overprogrammed memory. You'll have a very short list,
methinks.....

Almost. The ADMINISTRATOR that was dealing with the situation used a ISSUED COMMERCIAL radio to call the SO. The point was raised that he was NOT a sworn officer, so what made him so privilaged as to have access to the SO frequencies.

This is the concept that the Uniden Beartracker scanners worked on.

The only problem is, it just does not work 80% of the time. The
freq that as you say, is emitted by a Highway Patrol car, is the
mobile extender, (PAC-RT, PAC-PL or whatever you wish to
call it) and it only emits a frequency when the unit is turned on.
Most users only turn it on when leaving the car, when they remove the
HT from it's charger, or manually turning on a switch.

Because of this, the Beartracker was fairly efficient in finding
troopers who had checked out of their car for lunch, but not
a whole lot more.

From: n5rkn <n5rkn@apex2000.net>

> Just curious Jose, as to what parts you find "untrue"? Let's see...hmm,
> do you know what a TDR is?

Well, _I_DO! In some cases, the Time Domain Reflectometer is useful in detecting illegal hookups. Of course it's best if you know the specific velocity of the cable, including the effects from poor connections, and it helps to have swept the cable before, so you have a point of reference. You also can't have any other drops between the injection point and the terminator, or it's useless. What illegal hookups have to do with the use of illegal descramblers (the topic of your post - remember?) I'll never know. But it's common to change the topic slightly in order to sound more impressive. I just wish you'd use that thing more often to check for cable leakage. The LMR and scanner community is sick and tired of the buzzes, squeals, and other crap radiating from your lines in any urban or suburban setting. (LMR = Land Mobile Radio. - See? I can use impressive-sounding acronyms too!)

> Do you know that all converters, especially ones that we know are being
> marketed within a community have a specific IF freq? Are you aware that we
> can hook into a line and actually monitor what the set or converter is
> tuned to?

Yeah, RIGHT! All means of picking up cable channels, whether they be block converters, conventional converters, VCRs, cable-ready sets, etc. ALL have the same IF frequency. SURRRE. Or did you mean decoders? Frankly I don't think you know what the hell you mean, fraud.

> Did you know that the "bullet" protections devices usually drop your signal
> so much that your picture isn't worth watching. Now, that's in most cases.

Yeah, sometimes even if you're perfectly legal! My favorite ECM was the one Manhattan Cable tried a few years ago - took out a whole pile of their LEGITIMATE decoders, too! They were weeks cleaning up that mess. I wonder what their net losses were on THAT little fiasco. Including the loss of revenue from the subscribers that cancelled in anger. BTW, it's a good thing you don't live in my community. If I caught you skulking around my property, or any of my good neighbours' (as you mentioned doing in your previous post), I'd introduce you to a whole NEW meaning to the phrase "cable bullet". (ECM = Electronic Counter Measure. COOL, Eh?)

> Now, I've imparted some minor facts that most of this group should know
> ....without giving out a few trade secrets. But, those are usually found

> and illegal converters are found by good ol' ground pounding and by tips.
> Especially when a ex-girlfriend/wife, or upset neighbor or friend get tired
> of the bragging about how you are getting FREE cable services.

Basically, that's what it comes down to, doesn't it? With all your claims of high-tech devices and skills, the most effective means you have is to sit around and wait for a rat to get turned in by an even bigger rat.

> A simple RF trap will take care of the illegal converter...

If you did that from the start, instead of being too GODDAM cheap, then there wouldn't be much of a problem, would there? If someone doesn't pay for a service, then why send it down the cable to them? Safeway doesn't fill my bag with unpurchased groceries, and then threaten legal action if I eat them.

> Now, if you think you can beat me at my game, you are welcome to try.
> Warning, I have 25 years in the technical fields and I've seen it all. I
> have an attitude also.

I have an attitude myself. One of the things I enjoy about working in the communications field, is that I have enough knowlege to expose blowhards such as yourself to the general community - and I do it at any opportunity. I've seen your type all over the place - unsolicited crowing about your skills and accomplishments to laymen in order to cover up your inadequacy. Then, one day, you have to deliver. I'm sure the Manhattan Cable guy sounded impressive to HIS superiors too. I wonder how he looked AFTER the blowout? Friend of yours? You cable techs are at the very bottom of the "tech" barrel, and you know it. You're looked down on by comm techs, phone techs, computer techs - even TV techs. LMR *HATES* you and your incompetent ilk! You string your cables, twiddle with your line-amplifiers and try and look impressive. You're a joke to ALL of us.

> "To the Scanner Group": Thanks for the space and time. I'll try to
> limit my replies directly to the individual in the future.

Hey, that's right! This is completely off-topic for the newsgroup, isn't it? But, then YOU'RE the one who started this thread by posting a reply to a month-old, one-line comment to a spam message. But HEY - don't duck out on me now!! I've waited a long time for one of you cable creeps to come out onto a level playing field. What's say we move over to rec.video.satellite.tvro? I'd love to get you on MY turf for a while. Or how about sci.electronics.misc? Those sci.electronics guys are pretty sharp. You can impress THEM with your vague references to trade secrets, and stories of your technological prowess!!! It won't be any problem picking up the thread. The spam turkey posted all over Usenet - and I was right behind him, making sure he didn't profit with my one-line reply. You're a _big_bag_of_gas_, and I'd LOVE to see you "do the Hindenburg" right here on Usenet!

- Alan, VE3NNM

3331. Scanner Hacking question

Newsgroup: rec.radio.scanner
Date: 1998-04-30 00:00:00 UTC
From: derickam@aol.com
Message-ID: <1998043006053700.CAA12981@ladder03.news.aol.com>
Source record: 161904

Looking for advice on the best/easiest programming language for serial/parallel/USB comms on the PC. I am thinking visual basic or BorlandC, before I commit I would like some input from folks who have had good results with any language.

I would like a professional result. I am also interested in sharing information on the topic of computer interface. I am starting two projects,

1. computer control of the Icom R-7000 (I know this has been done, but I am not satisfied with what is out there).

2. Hacking Winradio.(going to be purchasing a unit soon as soon as I shop around).

Even if you can put me in contact with some fellow conspirators that would be great.

Derick

3332. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-05-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ib7si$9i9@news.Hawaii.Edu>
Source record: 161605
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

3333. TrunkTracker Capability in Charlotte/Mecklenburg NC?

Newsgroup: rec.radio.scanner
Date: 1998-05-01 00:00:00 UTC
From: Scott Rimmer <schrimmer@clt-online.com>
Message-ID: <354A4415.CDF4E679@clt-online.com>
Source record: 161606

Hi All.
I'm looking at possibly purchasing a TT type scanner to listen to the Charlotte/Mecklenburg PD here in my hometown. My question is before I buy one can someone tell me what type of trunking system (brand name) they use here? I don't want to buy one just to find out that it can't be scanned here.
Unfortunately, I don't know anyone around that has one, that's why I'm asking.
Thanks!
Scott

>
> That is called interpetation. The FCC makes the rules, and the
> interpete the rules.
>
> What part of that do you have such a problem with?

Actually, the Federal Regulation ITSELF is the interpretation of the law
set forth by Congress. The FCC cannot interpret the law more than what
they say in their own interpretation.

If the law says "x" and the regulation says "x", then the interpretation
is "x" and cannot be "y".

If the law says "x" and the regulation says "x = y" then the interpretation
says "x = y" and cannot be "x = z" or just "x" alone (even though this is
what the law itself is).

If a law says "x" and a regulation says "x = y", the only way that the
interpretation can become just "x" is by Congressional action to "x" in
order to invalidate the regulation.

For those of you non-lawyer, laywer-types, if you want a real example
(although in another subject of law), look at this:
Is interest on a personal income tax deficiency where the deficiency
is based on changes to trade/business deductions allowable as a deduction?
The IRS said NO and made a regulation that always says that personal
income tax related interest is always personal interest (non-deductible).

In both the 8th and 9th circuits, there are cases which strike down that regulation as invalid. The courts have found the IRS WRONG.

Here, we have the FCC, not the IRS. However, the point is: It's not what the FCC says. It is what the COURTS say.

3336. Re: Hello Bill Cheek!

Here we go again - another off-topic post from THE bandwidth wastrel!

> > Further, your mutual animosity is well
> > known
>
> There is no reason for me to have any animosity towards you, Cheek, or
> anyone else.

That is a bald-faced lie. A cursory glance thru your old posts will
disprove that statement to anyone who cares enough to check. You have been
hounding Mr Cheek for at least two years and flaming him at every
opportunity.

> > and it is quite apparent that you began this thread to either taunt or
> > provoke him (probably both).
>
> No, even an IDIOT like yourself should be able to tell that the purpose
> of the post was to continue our agreement another week. (It was clearly
> worded that way) Would you rather I had asked him to drop our
> agreement?

So now that he disagrees with you he's an IDIOT?? When are YOU going to
stop making off-topic posts and flames in this newsgroup and allow this
crap to end? YOU are the only person who can do it, since YOU are the ONE
person who started it.

And I still have not seen any message from Bill Cheek accepting your
proposal, so there IS NO agreement - except in your mind.

Some assembly required.
Batteries not included.
Void where prohibited.

3337. LA Secret Service Frequencies

I am not sure for a mac, but for a PC, you connect pin 7 on a DB25 to the stereo-jack's base/tip, and to pin 2 you connect the outer ring. You can search for various programs that use this type of cable.

I ordered a $600 MVT9000 during Christmas97 and got it in about a week also.
I didnt even use speedy shipping, I was impressed. Top notch service.

While were on the subject, I ordered during xmas because I heard that during
that time, post offices (customs) is overloaded and can slip shipments by
with less risk of being inspected. It worked for me. Was I just lucky?

It really belongs on "Talk.Politics.Guns".

BTW, the gun folks are bit smarter than we hams. If the talk turns
from just recreational topics to political, it is suggested that the
thread is to taken from Rec.Guns to Talk.Politics.Guns. We need to
move our "political" discussions from the recreational groups (to include
shortwave and scanner). Maybe have a group called Talk.Politics.Radio.

3352. RS Pro-64 vs. Pro-67 decision

Newsgroup: rec.radio.scanner
Date: 1998-05-01 00:00:00 UTC
From: bwise@webtv.net
Message-ID: <6ie0qo$r6h$1@newsd-142.iap.bryant.webtv.net>
Source record: 161625

I'm looking to purchase one of these scanners. Can anyone tell me if one is better than the other. There is only a $20 price difference. I noticed that the Pro-67 recieves extended freq. from 960-1000 MHz that the Pro-64 does not. Is there a need to cover these frequencies. The Pro-67 skips some freq. in the 800 MHz range. I'm assuming that the Pro-64 is the better choice. I would appreciate any help.
Thanks in advance, John

>::HEH::HEH::
> Alan, VE3NNM

Heh heh, indeed. However, switching a repeater's input/output
violates the band plan in most areas, and may be difficult to
coordinate, or cause other problems.

What happened here was that a couple of hams contacted the local cable
company and got them to offset the 145.25 carrier enough to get it out
of the passband of ham receivers. This solved the problem locally,
but some folks in outlying areas still had problems with other cable
suppliers in smaller towns. As cable switches to fiber optics,
perhaps these problems will be reduced or eliminated.

To be fair, I believe that some of the leakage is caused by illegal
connections by users, too.

I got my 2045 off the shelf at Radio Shack for $140. And they doubled the warranty for free.

And when I got home (as I suspected) the guy I deal with had plugged in all the frequencies for my surrounding neighboorhoods! An added bonus. There is one Radio Shack salesman who knows his stuff!

Added the CTCSS board. It's a fine scanner. If only it picked up standard fm radio. 87-106, and CB. That's were my Pro-26 comes in handy.

Stay tuned!

Can someone detail an interface cable to a mac serial port used for frequency loading? Or perhaps a URL for same?

As well is there any mac software that exists comparable to the windows frequency management software? I have SoftPC anyway, but it would be nice.

I don't see how, but can I shoehorn a ctcss board into the Pro-64?

Stay tuned!

WRONG !! Several reports recently issued by a few states, including
NHTSA, clearly indicate the fatality rate in states which raised the
speed limit INCREASED ! (by an average of +18%). It doesn't take a
rocket scientist to figure out you can't change the laws of physics.
You have a mass of metal traveling at higher velocities, it's going to
be more difficult to control and stop.

Please explain the fascination with driving at high speeds. And why
some people feel they don't have to obey the posted limit, while others
decide to adhere to it. What's the reasoning for feeling you happen to
be more important or better qualified then the driver next to you ?

Laughing Out Loud. It's not a pro-sign, and is more commonly found on the internet than on ham radio.

Just as Ham's expect new members within the ranks to know a little something about the pro-signs, the internet user community assumes that the average joe is going to be able to figure some of those out.

Now, go out, and read up.

Bill I am referring to the sample databases that were created and
downloaded with the program. I
noticed a few sample databases possibly (paradox) were already created
and each database is related to
3 files which I don't know off hand the extensions. .val was one. I
just opened up one of these; deleted
all the fields then exited the program and renamed the 3 files that
relate to the database. I copied these 3
files to a seperate directory and use them as my template. Note the
name of a pre-made database and
look in the program (freetracker) directory; you'll see 3 files
related to this database. For instance police.

Source record: 161668

99% of the time, you can pick up CHP fixed wing plane speed enforcement teams (known as "TAC" teams) on the statewide secondary channel known as the "Blue". Only the car-to-car portion of the Blue set is used the majority of the time. It is 42.340 MHz. (The car-to-station frequency is 42.180).

Typically, you will hear the airplane side of the transmissions much further away; when you get close to the enforcement site, you will begin hearing the ground units replying to the aircraft. When you hear the ground units strong, it's time to cut over a lane and cruise the limit until the bogies are clear.

Good luck!

Most of the time here in the San Francisco Bay area they operate on the
"Ivory" 45.02 MHz. They run speed enforcement along Hwy 85 at Saratoga,
Hwy 280 around Canada , Hgy 80 at Redtop and I've heard them on Hwy 5
near Stockton on this frequency. Operation is simplex mode.

If your looking for a way to post scanner freqs to the web, but don't want to use page after page of code to do it. Then You may want to use may easy, pre-built Web Scanner Data Base. Features available.

Search by city or state or frequency, Input from users - allowing them to add freqs into the database.

See it in action at [www.cnusa.com/scanner]

This database is available for only $35.00 Stock or $99.00 customized.

Contact: Larry at lpw@cnusa.com for more information

WRONG!!! He he. You've been duped my friend. The report in which you cite is flawed. What they did is "cherry pick" a small number of states that raised their limit. The only picked the one's that had their rates increase. The average increase over those states was under 2%(it may have actually been under 1% but I can't recall the exact number), I have no idea where you get 18%! No study has ever come up with a decrease or increase of anywhere near 18%. If you took ALL of the states that lowered their rates, there *IS* a decrease in the fatality rate(of 6-7%). Another thing they didn't tell you was that the states that left their limits at 55/65 had LARGER increases in the fatality rate than even the handpicked group mentioned above. Be wary of "studies" done buy the NHTSA or IIHS, they skew every study thats ever put out. They tried 4 years ago to say that German freeways/autobahns had fatality rates that were 4X the US rate. What they didn't tell you was that the data was extracted from 1989 and came from the EAST German autobahn. The German Autobahn has a much lower fatality rate than the US freeway system....PROOF that speed kills.....errr...I guess not.

> Please explain the fascination with driving at high speeds. And why
> some people feel they don't have to obey the posted limit, while others

> be more important or better qualified then the driver next to you ?

Hmmmm, about 95% of the people in the US do not adhere to the 55/65 NMSL. WHy? Because people know its a joke. Recall the limit had ZERO to do with safety and was passed to save fuel. It's been kept to allow states to harvest the freeways for revenue and so Insurance companies can continue to raise rates.

Feel free to E-mail me at the below address with any other myths you may
have about traffic safety.

WOW! It works! Now I know what area to stay away from. Thanks for the tip. You have to set the low limit above 896.1125 as radio won't tune in 890.000 though.

>can continue to raise rates.

So 95% of the population are lawless hooligans on the highway huh ?
Well given the "agressive driving" and "road rage" phenomena I can
believe it.

However back to 2 points I had mentioned earlier:

(a). The laws of Newtonian physics with respect to traveling masses
of steel (ie. a car), don't change. You go faster, your going to
have a harder time stopping, or a more serious wreck when the
vehicle is unable to stop.

(b). Why do some drivers feel they're better or more important than
the driver next to them ? If you disregard speed limits on the
highway, it's not unreasonable to conclude the same driver will
be disregarding 25 mph speed limits in residential neigborhoods
(where I might add your children might be playing). "Oh, but officer
it's safe to drive 50 mph in this area !, the kid had no business
getting in my way. I'm a skilled driver I know what I'm doing!"...

As far as statistics are concerned, at this point, it's a meaningless
argument that'll go in circles. Numbers can distorted to suit any
debate. My point are the 2 basic issues raised above, they are unescapable.
If you want to address them, please by all means.

3380. Re: Newbie asks: What is CTCSS?

Roger,

CTCSS stands for Continuous Tone Coded Squelch System, or something to that effect. It is a system in which a subaudible tone is broadcast along with the voice carrier, which opens up the receivers squelch. This receiver can be a handheld radio operating on simplex, or a repeater's squelch.

CTCSS is synonmous with PL, Motorola's implementation.

It is essentially a system used typically when multiple different organizations want to share the same frequency in an area.

Example: A couple smaller suburban areas around me use 155.340 for an area wide medical channel. One EMS place might use a PL of 186.2 and another one might use 250.3.

Why would you want it? Let's say you want to listen to xyz community, but don't care about qwe or rty communities. You can set your scanner to ignore all but xyz's PL's tone and it will block the other transmissions from making it to your speaker.

Feel free to reply with questions
Keith

Charles,

I tried lowering the SB volume, but if i go any lower than about 45%, I get
like practically no signal received. I get absolutely no results with
the SB volume set to like 25%, per your email. I'm getting some results
being set at 59%....

Thanks
Keith

Charles Morrison (ki5xp@iamerica.net) wrote:

>all the numbers again.

Use the "Edit Scanner Channels" menu item. You can jam frequencies into the scanner
from the database using this quite easily.

Also, an easy way to collect new frequencies:

Start a search on a frequency range
When a freq is found you want to save, right click the Frequency caption, and you'll
get a "Add freq to database" menu.

>Tip for creating new database:

The "Create new database" has a serious bug, and makes an unusable database.
Sorry! Just use the method you described. Will work everytime.
I have a new version coming out shortly with more features and the new db fix.

This is a very clean REALISTIC PRO-2004 300 channel scanner that could covers the cellular mobile telephone band in 30 KHz steps as well as all the usual stuff. It should be noted that in the US it is illegal to listen to the CMT. It can also be modified to have an additional 100 channels by simply clipping a diode.

You scanner fans know what this is! I have the original box and manual copy and it looks like new. I am willing to send it to the RADIO SHACK's scanner service facility at my expense for an alignment as it has been in service for almost ten years and this probably should be done.

There are many, many modifications, improvements, enhancements for this scanner but this one is unmodified. I believe Bill Cheek's Web site details many of them.

Price is $400.00 including the RS service and shipping.

If interested please reply by e-mail.

No John you are the one doing the flaming, you changed the reply to address so that you would get past everyones kill filter and keep posting your crap in hopes that you will get a response out of Bill. Then you can blame him for restarting the flaming.

All you have to do is stop replying to all the other post and the newsgroup will settle down, but you just want to keep things going because you have nothing better to do and want attention.

In order for the flaming to stop , you have to take the first step and that means stop replying to the other peoples post.

99.9 percent of the people on here will agree with the above, we want to read postings on scanners, not the constant please don't flame the newsgroup postings you keep making.

OK, I confess, I've given the "middle" finger a time or two to the idiot driving in the left hand(passing) lane not a single vehicle in the right lane that would require them to merge into the left lane to pass, and they REFUSE to move over. Oh, and I've honked the horn at them a time or two also! Just wish there were more LEO's on the road who would take the time to pull these idiots over and issue them a ticket for failure to yield. Road rage would be reduced, traffic congestion in some instances would be reduced also thus reducing the possibilities of SOME accidents.

Just my HO, and you know what the say about opinions!

LOL - Laughing Out Loud. As in reference to the KR8ZIE - Krazy(think
back to the TV show called Concentration if you didn't get it yet).

As for this day and age with Lawyers advertising on the TV of almost
every TV station in the US and wanting to sue everybody and their
brother for the stupidest stuff, I could foresee a lawyer taking up
a case where a transmitter was used to save and individuals life, and
the person making the call for help didn't have authorization to
transmit on said frequency. A crafty lawyer would pull out all the
stops, and play it up in the media to get the general public behind
the cause for the way the agency that's pressing the charges is
acting stupidly against their client...especially when a life was at
stake!
If we really wanted to get technical, why doesn't the FAA cite
people(who've had to fly a plane and land it because something
happened to the pilot that prevented them from flying the plane) for
flying without a pilots license? It's simple, they don't do it
because the person not only saved lives, they also prevented a plane
from possibly crashing and maybe causing more harm!
To end this stupid thread, I'll do what I have to do if a life is
at stake to save lives and then take my chances with the FCC and
other agencies after it's all over with.

Eric in Central NY(State)

as i understand minnesota law, mobile scanners are banned with several exceptions. law enforcement officials, obviously. news media, but they need a permit which entails an application process that requires a list of all frequencies you intend to monitor. each agency is informed. and hams, who have a ham radio that also picks up the public service bands (e.g. yaesu 50r)

i belong to several of the above-mentioned groups, and i carry a copy of the state statute in my car. i have never heard of anyone being pulled over for having a scanner, but i have heard (but have no first-hand evidence) of scanners being confiscated in connection with routine traffic stops.

besides the previous comments about the law, it is also flawed in its consequence. it will not deter crime (which is its intention. i.e. the bad guys hear the cops going east, they go west and mug an old lady) since bad guys by definition don't obey the law. the result is the law is applied to citizens with no ill intent, and old ladies continue to be mugged.

73's, and good listening. dejim

Antennas junk. For 49 MHz anyway. I've had a couple Bearcats I think you'll find a coat hanger works better literally. The baby monitor receiver has an antenna with an optimized length for 49 MHz. The stock antenna for that scanner was designed for higher frequencies. I had the same problem with one of my Bearcats. After I plugged it in to a different antenna it worked fine.

The antenna makes the radio.

Well, I guess you have never been in an emergency condition?

Four years ago, the Los Angeles area had a rather large earthquake (the
"Northridge" earthquake - 01/17/94). A friend of mine and I, both
licensed amateurs, as requested, reported to assist our local U.S. Dept.
of Veterans Affairs (VA) hospital. While there, the West LA VAMC needed
to contact the Sepulveda VAMC (within 3 miles of the epicenter).
Telephone service was still down (10 hours later) and the VA Police 2 watt
radios were insufficent.

Using our modified amateur equipment, the VA police officers, under ham
supervision, were able to contact the other VA hospital (using the VA's
assigned frequency).

Is that a violation of 47 C.F.R. 97? NO - 97.401(a) indicates that during a disaster, "an amateur station may make transmissions necessary to meet essential communication needs and facilitate relief actions." Additionally, 97.403 further says "No provision in these rules prevents the use by an amateur stations of ANY MEANS of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life or ... property ... when normal communication systems are not available."

Granted, we limited the transmissions to the normally authorized frequency of the VA, and the VA officer present held the authority for that frequency, but that is NOT an amateur frequency. Had this not been during a disaster, yes, there would have been a violation. However, without prior modification of the radio, the communications effort would have been delayed and could have actually POSED AN ADDITIONAL RISK to human life.

You ask why? That's WHY! One never knows when a disaster shall strike.

> Personally, I would love to see ham-bands-only gear make a comeback in

> nice, tight front-end.

So, while we're at it, let's have the FCC cancel 47 C.F.R. 97 subpart E (emergency communications) in its entirety. Therefore, since amateurs no longer have any emergency communications needs, I guess we don't need all that radio spectrum either. Let's let Congress sell it all and kill our national debt!
[Note: I don't support that position. It's offered only to show how absurd the above-quoted author is being. We all know that the U.S. Government is taking everything "to extremes" lately.]

Yes, the "mileage" can be ZERO too.

Exactly what, are you trying to clarify?

The FCC has interpeted this to mean any frequency in the HAM
spectrum. The FCC makes the rules, and interpetes them.

Unfortunately, Congress passed a law that went
into effect in April, 1994, that prohibits the
sale or importation of scanners that can be
modified for cellular. You are four years
too late....even if $200 ahead.

Your only recourse is to snag a pre-1994 scanner
that can be or already has been modified for
cellular. Here is an excerpt from my FAQ that
tells about such scanners:

==========
Copyright (c) 1998 Bill Cheek <All rights reserved>

021: How do I restore cellular in my scanner ?

Forget it, pal. It ain't going to happen. The TDDRA
of 1994 expressly forbids the manufacture or importation of
"easily modified for cellular" scanners after April, 1994.
Manufacturers turned to putty and removed the cellular
programming from the scanners' CPUs altogether. Sorry, it's not
possible if your scanner was made or imported after March, 1994.

But here is a list of all those pre-1994 scanners of which I am
aware that ARE capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3

PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2 *5
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compment), or no "A" in the serial no.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID.

Note 4: Date of mfg code must not end in the letter "D".

Note 5: Units with date code of 5A4 can tune cellular in 30 kHz Steps using a keyboard entry sequence.

For instance, PRO-43's imported before March, 1994, are modifiable, while some brought in during March and all thereafter are impossible to modify. Date codes of any -A2 or -A3 and only 1A4 and 2A4 are assured of being modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were naturally capable of receiving the full 800 MHz band, without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100 *
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 * Icom R-7000
Yaesu FRG-9600 AOR-8000 *

* pre-1994 only

Some of these radios, if still current, had the cellular removed by the factory after March, 1994. There may be possibilities of restoring cellular in later models of the AR-8000, AR-3000, and ICOM radios by replacing an EEPROM or reprogramming one, but that is beyond the scope of this FAQ, and in general, should not be considered feasible.

==========
022: What about cellular restoration ads for post 3/94 scanners?

Yes, I used to see magazine ads to "restore" cellular or to "unlock 800 MHz" in newer scanners. Gasp! This is almost a

deception. See, they're advertised the "VD" mod.

Virtual Downconversion - better than a venereal disease, but not by much. To my way of thinking, it is an inferior method of "unlocking" the cellular bands because:

A. They're not really unlocked. VD is a trick of turning off one oscillator and turning another one on. Typically, they set the scanner to the 400 MHz band, and then turn off the normal 400 MHz Local Oscillator and turn on the one for 800 MHz to make cellular receivable on the 400 MHz display.

B. There is no logical correlation between the actual cellular frequency and the displayed frequency. It varies from one radio to the next, but suppose 880.000 MHz comes in. It might be received/ displayed on 432.6775 MHz. Duh....??

C. The full cellular bands of 823.950-849.000 and 868.950-894.000 are not available by this method. In fact, only a small part of one or the other (often not both) is available, like maybe 10-20 MHz of the total.

D. There is no 30 kHz stepping. You're limited to the default CPU "rules" for the band in which the cellular appears, typically 5 kHz or 12.5 kHz.

E. The exact results of the VD mod, generally described above, depend on the scanner. Results vary from one to the next. None are what I'd call "good" or even acceptable.

The good thing that can be said for the VD mod is that it is the ONLY way to get any cellular at all from post March-1994 scanners. So, the advertisements that you may have seen are not exactly "fraud".....but you sure won't get much for your money.

==========

I'm using one and love it.

I've got some pretty decent DOS software I've written that is a fairly complete freq database, CE-232 control, and logging software program. As part of the logging, it also records audio via a soundcard for later playback. All of the audio is stored as part of the overall freq database. I'm getting into a C++ MFC programming class for Windows starting next week, so I'll be doing a re-write of the whole thing for Windows this summer and fall.

I'm running it in DOS under Win 95 with no problems, but some of the early beta testers had problems getting it going. Hopefully the Windows version will solve these problems.

Anyway here's some more poop on the DOS version:

QUICK (VERY) OVERVIEW

The new CE-232 control program features a database for maintaining your frequencies as well as giving full access to your scanner via the Commtronics Engineering CE-232 interface. It is a DOS-based program that is written in C for maximum performance.

HISTORY (IF ANYONE ACTUALLY CARES)

The program started out just as a simple frequency database program to organize my frequency lists for my PRO-34. Over the last couple of years, it's really started to grow, especially since I added a PRO-2006 scanner and then the CE-232 interface. The software supplied with the CE-232 interface, though more than adequate, seemed to be lacking something for my needs. Almost immediately after finishing the CE-232 kit, I started writing software to control the thing. I really disliked the idea of having to maintain my frequency database with a separate program, export to an APF file, and then download that file to the scanner. I was looking for an integrated database/CE-232 control program to fill my needs. What better way to get what you want than to write it yourself!

An idea that I had right from the start was the ability to record the audio along with the events that were being logged. Before I wrote this program, I would let the original CE-232 program log frequencies all day and see which

ones were active in my area (I'm into mil-air monitoring). At first it was exciting to see all the new frequencies that were active during the day while I was at work. However, I soon yearned to actually hear what was going on all day while I was gone. The VADER card seemed like a good idea, but justifying the cost to my wife was damn near impossible (I'm sure everyone's been in that boat at least once). Since Sound Blaster cards had the capability to record audio, why not use what is already in the computer?

In early Feb 96, the audio recording capability became a reality. I've been using and testing it since then with excellent results. In fact, it's exceeded my expectations. For the technically minded, (probably most all of you), I'm recording at 8192 Hz, which is good enough for the audio quality coming out of the scanner. Hopefully, before beta testing starts, I'll have audio compression in the code to help save on disk space. However, since hard disks are now so big and cheap, using the Sound Blaster to record the audio and save it on the hard disk is very feasible. My sound file has peaked at around 200 MB, which translates to over 7 hours of audio at 8 KHz sample rate! Compare this to just 55 minutes stored by the VADER card's RAM, and you can see how powerful this is. No more worrying about losing data due to running out of memory. Of course you'll probably want to purge the audio after you've listened to it and made your notes from it. That way you won't have to keep this humungous data file hanging around on your disk.

Saving the audio onto the hard disk opens up all kinds of possibilities for signal processing to clean up the audio if it's in bad shape. I hope to add algorithms for doing DSP work in a later version. Of course if you have your favorite DSP package right now, you will be able to export the audio and play with it yourself right away, but it's always nice to have the functionality integrated into the program if at all possible. As the computers get faster, we may be able to do some real-time DSP as the audio is coming in. This is where it'll really get fun! Too bad I don't have a TMS320C30 or C40 DSP card at home like I do at work.... :)

Anyway here is a quick overview of the features (may not be completely up to date since things are always changing):

Features:

- database for frequency management
- user-defined groups and subgroups to help organize frequencies
- search for frequencies by frequency or callsign
- browse frequencies by:
frequency
city
county
group
subgroup
- download frequencies to the scanner (autoprogramming)
PRO-2004/5/6
PRO-2022
PRO-2035

PRO-2042
PRO-26
PRO-34
PRO-37
PRO-39
PRO-43
- import/export frequencies
CE-232 APF format
Percon UFDBF ascii
Percon SDF
Others in the works (to come either before or during beta testing)
UFDBF DBF
Excel, Lotus, or other spreadsheet format
(if anyone has detailed information on these spreadsheet file
formats, please let me know)
- full control of the scanner via the computer keyboard
- monitor scanner display (full 2-way data flow) (PRO-2004/5/6 only)
- frequency lookup of current active frequency
- log events
- event recording organized into sessions
- session summaries show active frequencies, new frequencies, number of
hits per frequency, and total audio time (if recording was on)
- detailed session reports show all event date/times for all frequencies
active in that session
- recording and playback of event audio using a Sound Blaster compatible
sound card.
- replay audio for a session in time order
- replay audio for a session in frequency-time order
- export audio to raw audio file (.wav and others coming soon)
- create and activate multiple reject lists
- create multiple "blocks" of frequencies for quick downloading
- supports multiple scanners sharing the same frequency database
- save search limit pairs for easy downloading
- Multiple reports:
Programmed frequencies in channel order
Programmed frequencies in frequency order
List frequencies by:
group
subgroup
city
county
state

- Lots of other functions that I don't have time to implement right now,
but will come in later versions, plus whatever ideas come out during
beta testing - I'm sure I'll get an ear full! :) If anyone wants to see
my idea list, just let me know.

There is no scripting language in this version. I'm hoping to add that
later, probably during a Windows version of the program. I am going to
try to implement some of the more useful scripts that I have come across,

however. If you have any favorites, pass 'em on to me and we'll see
about implementing the functionality as part of the program.

Database details:

- frequency record fields included are:
frequency
CTCSS
callsign
FCC service code
city
county
state
group (user defined)
subgroup (user defined)
mode
data source
2 description lines
additional notes (unlimited)
transmitter lat, lon, elevation, height, address
station class code
of mobile vehicle transmitters
of mobile portables
of mobile air
of mobile marine
of mobile pagers
of units

- channel information
channel number
frequency
delay (on/off)
lockout (on/off)
receive mode (nfm, wfm, am)
frequency block (see below)

- scanners
description
number of channels
number of banks

The frequency data is shared among the scanners, so there is no
need to enter a duplicate frequency just because it is programmed
into another scanner.

- frequency block
block number
block description

This is a collection of frequencies that are kept together and given
a name for easy and quick downloading to the scanner (i.e. disaster,
local county freqs, military air, or whatever). This is also used

to support scanners with memory expansions, such as the 25,600
channel expansion for the PRO-2006.

- reject lists
list description

The program supports creation and activation of multiple reject
lists. This is useful for creating different reject lists with
different type of frequencies (i.e. birdies, pagers, etc.).

- bank descriptions
bank number
bank description (2 lines)

- search limit pairs
Save high and low search limit pairs and a description
for automatic downloading to the scanner. You could even put
the entire FCC bandplan in here if you have the motivation.

- event information
fields include:
event date
event time
CE-232 status bytes 1, 14, 15, 16
event duration

- session information
session number
start date, time
end date, time
description

Whenever event logging or audio recording is enabled, a new
session is created (or an old one can be chosen). All frequency
events (i.e. squelch breaks and associated transmission) are then
connected with the session. A session report can then be generated
showing either a summary of the activity (frequencies, # hits, etc.)
or a detailed summary showing all frequency event activity.

- audio data

The audio data is now stored in 8192 byte chunks. This may
change to minimize wasted space if I go ahead and implement
compression algorithms.

I use an MVT900 and from the 3500 pages I received this evening I got
25 with errors.
Not bad considering its just plugged straight from scanner to line in

What is a discriminator tap anyway?

Thanks so far for the responses. I want to give an update to where Im currently at. I'm using an ALINCO radio out of the speaker jack directly to the microphone input on my AWE64 sound card. I'm assuming MIC input and line input should be the same. (Please correct me if Im wrong.) The cable runs direct from speaker out to MIC in.

I have my Mic input level set to 59%. My volume on my radio is relatively low.

I'm getting mostly 512 BAUD decodes, and numeric pages ONLY.
It seems like there is a whole lot of pages/activity that simply go unnoticed. The alpha pages decode totally into garbage, nothing even close to anything recognizable.

Ideas ? Are alpha pages typically 1200 baud or higher perhaps?

Incidentally, even though there are tons of garbage alpha pages, the statistics show 100% decode out of 130 pages.

Bite my tongue. As I was typing this, POC32 just decoded a weather forecast page!! That was crystal clear too, first alpha page I've gotten.

Does anyone know how to disable the alarm beep that goes off. Annoying and makes you miss the first part of a transmission. It is a friend of mine and he has no paperwork on it, so we aren't sure if it is programable to remove the beep/alarm or if you have to hack inside to remove it. The mute works okay until the next time the alarm goes off.
Thanks much,
-Dave

I know this has probably been covered 100 times before, but I figure I'll ask anyway.

I have a Uniden SC150Y. While I realize that cellular coverage is excluded per the 1994 law, what am I receiving on around 894-912? (or rather, what would I be receiving if I listened, which of course I do not, if such listening were against the law?). Are they just ghosts of cellular calls? Frequency bleedover?

Thanks for any help,

Brien

Source record: 161725

I called my Loco Radio Shack and asked them to check stock on a scanner 2045. The guy said that it was not a valid number. He said it has to be a number like 20-2045. I said 2045 is the model number not the stock number. He insisted that I was wrong because scanner model numbers start with pro. I said "OK...COULD YOU PLEASE CHECK STOCK ON A SCANNER MODEL NUMBER PRO-2045"!! He told me they didn't exist. He had 2041 and 2037 etc. I told him to keep looking until he found one because I was not going to hang up until I got an answer. A couple of minutes later he came back on and said they had two just like he knew it all along and I was the idiot. Bottom line is it was worth the trouble as this is a great radio for the money. The will let you put one on layaway, but only for 30 days. With tax it was $138.00 and worth every penny.

>6. Be able to drive headphones REALLY LOUD!

Any fan of Awesome Bill is worthy of solid advice.

Try the Radio Shack PRO-64. On sale now for about $150.

400 channels, runs on 6 AA cells. I've got about 18 or 20 track hours on
the first set of batteries in mine.

It also does the 800 MHz band, if you want to listen to Foyt's drivers at
the Indy car races. Couple of NASCAR and CART boys up there, too. Also
does 134-174 MHz if you like listening to the starter and corner men at
short tracks.

You can load frequencies by computer if you want to fill it up. See my
web page at http://www.access.digex.net/~kplotkin/scanner.htm for links to
all the shareware/freeware.

Not sure if anything is truly drunkproof. :-)

About the volume... DON'T crank it up so you can hear with ordinary
phones. The 64 will drive RS's $20 phones loud enough to hear over the
cars, but you'll be punching holes in your eardrums in the process.

You can buy a good set of noise reduction headphones from Racing Radios
for about $60. However, you can roll your own for somewhere between $15
and $25:

1. Go to the hardware or gun store and buy some earmuff type hearing
protectors. For $11, I got a set of EAR Model 1000. NRR is only 20 dB,
but the cushions are glued on, which helped the project.

2. Go to Walmart and buy a cheap set of lightweight headphones.

3. Tear the ear pieces off the lightweight phones. Trim off any protruding parts so the back sides are flat.

4. Using double-sticky tape (I had some foam picture-mounting tape laying around) stick a phone earpiece to the center of each earmuff. Route the wire under the muff's cushions.

In (4), I peeled up the cushion (glued on) to slip the wire underneath, then pressed the cushion back in place. Holds the wire nicely.

You'll also need to spend $2 at RS for a mini stereo-to-mono adapter.

This setup works great for me. I had stumbled on some lightweight phones on clearance for $1, so mine wound up costing about $14 including the adapter.

The latest version of this file can be accessed via my web page at:
http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

>everything also.

Hams know that they can't use 145.25 repeaters in most areas because
of leakage from Cable TV. If the cable company would spend as much
time maintaining their lines as they do whining about theft and
raising rates, maybe hams wouldn't be so antagonistic.

Subject: Re: Make Your Own Cable TV Decrambler
From: n5rkn <n5rkn@apex2000.net>

First...the two comments I just KNEW you were going to make in your reply:

> Well, gee Alan (VE3NNM)... I did try to reply to you directly & not go
> through the group. But, evidently you are afraid of spam &
> "flaming arrows" coming back to your real email address. So, here I am....
> and my email has always been correct.

I don't post an e-mail address because I don't HAVE one. I have free, unlimited access to the 'Net during the off-hours courtesy of my workplace. One of the conditions is that I do not release the address for personal use. From the comments posted so far, _I'M_ not the one who'll be the target of the "flaming arrows" anyway! I give my Amateur Radio callsign for the specific purpose of NOT being anonymous. If you feel an overwhelming need to correspond with me, I'm in the Callbook.

> Would you prefer to take this "off-air"?

No, there's nothing I'd say to you in private that I won't say to you publicly.

And now, onto the REST of the message...

> As, I don't take nicely to being told that I'm full
> of crap and don't know what I'm talking about.

Well, it happens to be true. Perhaps it's a poor choice of words, perhaps it was lack of knowlege, I don't know. Take the following example (one of several I could use):

> > Do you know that all converters, especially ones that we know are
> > being marketed within a community have a specific IF freq? Are you aware
> > that we can hook into a line and actually monitor what the set or
> > converter is tuned to? You don't?

Now to me, "marketed within a community" seems pretty clear. Go to a department store, a stereo store or wherever, and whatever type of converter you get will have the same IF frequency as any other. Regardless of the technology involved, your gear can determine how it is being used. FULL-OF-CRAP!! If you MEANT to say that all of the converters supplied by the local cable company function at the same IF and therefore can be detected, then you should have said THAT! Your comment is typical of the broad over-generalizations and half-truths that has personified your industry for as long as I've been watching it. Take a small grain of fact and blow it all out of proportion so as to appear larger than life. Nit-picking? Maybe. Do I have a hair trigger with respect to cable-cartel propaganda? YOU BET!!! Welcome to

the world of Usenet. Sneeze the wrong way and someone from anywhere in the world can tell you to wipe your snot off of his screen.

> Perhaps the cable companies in your area are idiots.

Well, after several years of no premium movie channel because they didn't pay their bill to the provider, Norcom Telecommunications Ltd just started carrying it on channel 33 using the very same notch-filter type scrambling that started this whole thread. Does that answer your question? I'm already swamped with people asking me if I can decode it and would I build one for them. I tell them YES to the first part, and NO to the second part. That's not going to stop some other enterprising individual from making a tidy profit, though. If anyone EVER gets caught, I can let you know. Then there was the time the municipality threatened to sue because they hadn't paid their pole rental fees in some time...

> That doesn't mean they all are.

Perhaps. I haven't met them ALL.

> Oh... and good! You do know what a TDR is... I'm almost impressed. And,
> gee.. you have an inkling of an IF freq is... almost impressed again. But,
> then perhaps that's because you are possibly a ham? Many hams I know think
> they know everything also.

Yes, I AM a Ham. It started me off in my teens toward a very interesting technical career. BTW I notice YOU use YOUR callsign in the NewsGroups also. I suspect that trying to impress (most likely to intimidate with technobabble) was the reason you mentioned TDRs and IF frequency detection in the first place.

> If you would like to reply directly, then I will reply more specifically to
> your comments in your posting.

No, one of the things that the cable cartel has always tried to avoid is exposure and public accountability. If you want to have it out, we'll do this in public. One of the great things about Usenet is that the whole world is watching. Make a mistake and there's ALWAYS someone waiting in the wings to point it out. Perhaps you've learned that lesson yourself. It keeps people honest. _I'M_ willing to stand up to the scrutiny. For a guy with an "attitude", you sure cave easily!

> Now, either reply direct..or forget posting.

No problem, you can back out gracefully. I already suggested moving to a more appropriate Newsgroup, but if you want to quit, then quit. I'm not trying to start a flame war, and it's nothing personal - I just hate corporate BS.

> I seldom check into the boards with exception of some MS program related
> ones.

MS as in Micro$oft, right? Somehow that seems fitting, another monopoly about to get a good tuning up.

> I seldom take take the time to do what I've been doing...and that is to post
> a msg. I usually just chuckle and move on.

Methinks you should continue in that vein.

>
Sure they can! Just switch the Input/Output frequencies, and put
the repeater outside the cable coverage area. All the Hams then
get to TRANSMIT on 145.250 MHz, and they get to do to the cable
company what the cable company has been doing to them. I set up
a sampling autopatch on 144.650 +600 for my buddy who lives out
of town, and we always make LOTS of phone calls when were driving
through town. Remember: what leaks out can also leak in ;-)
Not too many people enjoy the movies on WTBS around here.

No smiley needed! The R9000 atually has a separate front end to handle 0.03-30 MHz that is rather similar to their HF receivers and transceivers, and uses the main synth divided down to improve phase noise. You could say it's both in one box.

Well, either of the above terms, while not techically correct, is SORTA
right :-)

What you are refering to is called image reception.
Without a major tech. discussion, if you double the higher IF
freq(10.7/10.8 in most cases), and add the result to the frequency you
want to hear, you should hear it.

From: 'Icom geek' <vt480tfe@altavista.net>
Message-ID: <3549A424.44E@altavista.net>
Source record: 161744
Cross-posted to: rec.radio.scanner,alt.radio.scanner

If my memory don't play with me, I recall to once have seen an instruction how to modify the Icom IC-H16T to obtain a wider frequency range up to the UHF band, even if the IC-H16T basically is for the VHF band (standard range about 110~180 MHz).

If someone else recall to have seen a such instruction, or maybe know how to do that modification, please notify me ASAP.

BTW, the IC-H16T is a damn good radio. Too bad from my point of view it is no longer produced, and I find that the substistute (the IC-Fxx) is inferior to the previous one in different ways... :-(

PS. As I currently don't read this NG on regular base, please reply by e-mail. Thanks. :-)

Yes, I do know how to read. I also know, that in any rule or law,
it is how that lawmaker or rulemaker interpets the law or rule.

The FCC has stated that the rules you quote, apply only to the
Amateur frequency spectrum.

That is called interpetation. The FCC makes the rules, and the
interpete the rules.

What part of that do you have such a problem with?

Good question. Perhaps 4 hours or so if the battery is fully charged and
in good shape. Have you considered going with one of the racing dealers
that does mods to increase battery life and audio power? You might want
to stop by :

http://www.racescan.com/
http://www.racingelectronics.com/

and see what they have to offer.

> I was also thinking about a BC60XLT-1, since I only need a few channels and
> it runs on AAs.

AA power does give you much more flexibility. Run the radio with some
high-capacity ni-cads or NiMH and carry an extra set should these give
out.

You might want to stop by Radio Shack and see what they have on
sale/special. Most of Radio Shacks "low-end" radios are re-badged
Unidens. The BC60XLT is equivalent to the PRO-70 or something like
that.

> Does this scanner have a bad reputation?

Not to my knowledge. It's an entry level radio with the most basic of
features. The circuitry, and therefore performance, will probably be
pretty similar to the SportCat and BC230XLT, if not identical. Audio
output is likely the same as well.

> Rich Wells, nice web pages. thanks for the info.

Posted for the benefit of many, and emailed for the benefit of one.

The Los Angeles County Lifeguard Department was absorbed by the Los Angeles County Fire Department a few years back. While they now also operate with assisting units on the LACoFD VHF "Tac" & UHF "Blue" channels, the Lifeguard Division operates internally on their old 37MHz system. Bid on their new portables a few months ago. Enough talk, time for the numbers:

(All are simplex, carrier squelch)

37.200 Common / Underwater Recovery Unit
37.080 Northern (Malibu [Section HQ], Zuma, et al)
37.360 Central (Santa Monica [Section HQ], Marina Del Rey, et al)
37.060 Southern (Hermosa [Section HQ], Catalina Island, San Pedro et al)

As you get lower in frequency, keep in mind that a short antenna
is very inefficient and the result is signal loss. For better VHF
reception, get a longer duckie or better yet, some form of
telescoping whip. See my handheld antenna review for further
recommendations :

Does anyone have any interesting frequencies for the Cinco de Mayo celebration in San Jose, CA tomorrow?

If so, can you please post them?

Thanks

Bob

This is fine and dandy, if one is independently wealthy to afford $50,000 or more for your own RS franchise.

As for working for the Mom & Pop franchise operations, give me a big Corporation any day. I was cheated more often by "family type" companies than large corporations. Besides, one can not live comfortably on $10 to $12 an hour in any community larger than a small rural town.

The bottom line, people working for Radio Shack stores are trying to make living just like the next person. Try getting a semi-skilled UAW Auto Worker to work for less than $9 an hour, it wont happen.

Before I draw judgment on this situation, what is the real story is behind all the engineers you cited above. Are they retired and the RS Franchise job supplements that income? Are their spouses make more than $20,000 a year? Too many variables exist, and my gut feeling is there more to this story than just being happy to leave big industry.

Besides "political problems" exist everywhere, from this newsgroup to Grover's Franchised Radio Shack store, it is a constant in every day life.

By the looks of your post you are a ham. If you have a dual band radio, capable of out of band RX, use that. The radios are tuned very close to the VHF RR band (160-161 MHz) and freds are around 463 or so. My ICOM 2410H, IC W31A, and Kenwood TM-V7A are the best radios for listening to the RR freq's. The 2m antennas have much more gain than most scanners, so you will be able hear more distant stations with them also. I can hear around 20 miles with my radios and only about 5 with my scanner (RadioShack Pro 2002). If you have any other questions, feel free to email me.

I have the following scanners for sale
All are in perfect condition and look new.

Pro-2040 base $75.00
Uniden Bearcat Twin Turbo Sportcat handheld $80.00
Uniden Twin Turbo BC3000XLT (w / leather case)handheld $200.00
Uniden BC890XLT base $200.00

All are complete with charger.
I'm looking for a BC895XLT and would trade above toward one.
If interested email me at brs@flash.net

But.... One of those programs is your Excel spreadsheet. Excel is
supposed to work on Macs as well as PCs.

I don't know much about Macs. However, I once hooked up a serial printer
to a Mac with no problems. I recall there was a standard 25 pin serial
port. The 25 pin version of the interface cable should work.

Okay, I have been away from this newsgroup for quite some time now (a good 6 months i think) and quite a few things have happened and certain trends are starting to appear

Frist of all, my city, like many others out there from what i can tell have had their police serivecs and most other municipal services switched to Digital. Instantly 80% of the reason i bought a scanner 5 years back just disappeared. All im stuck listening to is cabbies and the airport which in all honestly are pretty boring, it sure sucsk when you hear sirens fly by your house or the police copter fly overheard and not be able to pick up the scanner tune in and see whats happening. This has been driving me crazy since my city changed over in October. In fact it pisses me right off!!! All i know is that my city uses the Motorola ASTRO SmartZone Type II radio equipment. Now im no expert on radio equipment in fact i know very little other than what i have picked up on this newsgroups and fellow scanner hobbyists. In fact i havnt used my scanner now in over 3 months.... its actually collecting dust. I dont know if im the only one out here that feels this way, but i have noticed other cities whose police have switched over to digital. Sure there are other things out there that we can listen to other than the police, fire and ambulance. You got the airport, cabbies, truckers, the odd cell phone converstation and a few toher things.......but what happens if all those go digital too?? Yes i know its expensive but hypothetically speaking, if everything in your city goes digital to an extent that you barely pick up anything now on yoru scanner......what are we scanner enthusiats to do?

So the question is, "Where do you buy/find/get a DIGITAL SCANNER"? Well i have absolutly no idea. From posts on here and on DejaNews it seems that no one else seems to know either. This is why im writing this post. If we can put a man on the moon, see a new galaxy 12.3 lightyears away (or was that 12.3 million light years away? i cant remember) then for christ sake we should be able to hear what the cop is saying on his radio in his police cruiser 9 feet from the front of your house!! I mean come on people lets pool our resources together and have a final word on this.

What im looking for is as much information about Digital Scanning as possible, i want to know all options regardless of price or who owns it (ie govt or what ever) So does anyone know where to get a digital scanner? Answers of "yes i know where to get a digital scanner, but its expensive" dont really help too much, i dont care if it costs 2 million dollars, what is it? who makes? where can you buy it? We can all be pretty sure that the govt has the abiltiy and the military, so who are the manufactuers of their stuff? do they have civililian versions? How does it work etc. etc. etc. Has anyone heard any rumours of possible new digital scanners? if so, who is

making it, what have you heard, where did you hear this from, when do they plan on having that model released etc. etc. etc. I also heard you could "program" or "hack" other radios that are commerically available so that you can tune in to the digital conversations, but i dont care if that radio costs 200 grand or 2 grand to buy in order to hack it or fix/modify it...lets get the names and how to do it... just becuase its "expensive" doesnt mean we shouldnt be able to hear about it, or learn about it

Now i appologize if a post like this has allready cropped up here, but searching dejanews i couldnt find a heck of alot of information, other than people saying "where can you buy a digital scanner", and an answer of "you cant", or "they are too expensive for you to buy" etc etc.... Lets face it folks, the way technology is changing I'll bet that a large majority of organizations and services that rely on 2 way communication will follow the digital road. So waht does that mean to the recreational scanner, like myself, who likes to know whats going on in his neighbourhood? This is what we need, facts on whats happening, whats going to happen, and what we can do about it. Otherwise my scanner is gonna gather dust for more than just a few months, and to me thats a shame.

I dont feel like waiting a few years for a "commercial" digital radio scanner to come out on the market that is priced right, i want one now regardless of cost or who can get it.

Thanks for taking the time to read this

LJM

PS Feel free to flame/pick apart what i said, im not trying to promote myself as an expert in anything, in fact i would be greatfull if you could correct any possbile mistakes i have made (other htan grammatical or spelling) hehe

Any scanner capable of picking up the 160Mhz frequencies will work. I
think that
the outfit Scanner World has several Uniden models always on sale at any
given time.

>This is what comes up under KD4RME, and is why one does not post one's
>call sign when he is trying to antagonize and troll on a newsgroup.

I guess that makes sense why you refuse to post yours. (If you
have one, which I seriously doubt) You realize that your only
purpose in life is to antagonize and troll here on the
newsgroup, and are ashamed of yourself.

Makes sense to me.

>Your lucky I'm not mean enough to post it uncensored.

I posted my call sign in the first place. I knew that anyone
that wanted to could access any number of callbook servers,
and come up with the same information. I am not ashamed
of it.

>You DO know that you can get that license taken away from you now that
>you publicly showed that you do not know the rules! I would suggest you

What in the devil are you blabbering about now? Who is going to
take my license away, because I did not know which rule?

I know of a couple of railroads who are using the UHF band, too, up in the 460 Mhz area. I'd be sure to include that if your getting the scanner for just that purpose.

Pocsag Mailing List (pagers) - http://www.qth.net

Pocsag is a mailing list (reflector) open to all radio
amateurs for discussion of Pocsag.

* Anything Pocsag Related

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe pocsag

To be removed from the mailing list:

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe pocsag

To post information/questions to the list:

TO: pocsag@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: bshort@speedchoice.com

QTH.Net Digests and Archives (for subscribers)
k7on@qsl.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
pocsag and subscribe pocsag-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe pocsag-digest
unsubscribe pocsag

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index pocsag-digest

and get a list of files that are available by request.

Here is an example:

```
>>>> index pocsag-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048
```

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get pocsag-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/pocsag-digest.archive

I have a Relm HS-200. It works great. Take a look at this guy's web page. He has a list of scanners he has reviewed. I consider good (loud) audio to be important and good sensitivity to also be important for rail scanning.

>sub-band limits, signal purity, non-interference etc., in order to
>provide essential communication needs in connection with the
>immediate safety of human life and immediate protection of property
>and when normal communication systems are not available.

Yes, this is precisely the correct interpretation of the rule. It applies
only to an amateur radio station, which is defined as a station operating
in the amateur radio service, IE on amateur frequencies.

>But when it comes to operating outside the ham bands, I believe that
>hams have no more rights than an unlicensed person to do this,
>although they certainly might have greater means and knowlege to
>achieve it.

Also true. When operating outside the scope of Part 97, which you would
be if you were operating on Public Safety Service frequencies, Part 97 has
no force. You are no different from any other person unlicensed for the
service in which you are operating at the moment.

>The fact is that when it comes to saving human life, most people will
>go to *any* lengths, including breach of the law, to achieve that
>goal, such as when speeding an injured person to the emergency room.
>But if you're then brought to account for your actions, just plea the
>emergency circumstances in mitigation and do not try to plea that you
>have any particular FCC permission on account of your license.

Also true. This is the legal doctrine of "the lesser harm". This doctrine
says it is a defense against breaking a law if in so doing you prevented
a greater harm (and you can show that there was no reasonable
alternative to breaking the law).

>Claiming you have permission would not be true and I believe that
>raising such a false defence will only harm your genuine and best one.

Again true. Part 97 only applies to the amateur radio service. It cannot
authorize activities in another radio service. The rules being waived
by 97.405 when it says "these rules" are the Part 97 rules. They are
not the rules of another radio service that are being waived.

Kansas Column 0598

1. Topeka Fire Department info
2. Topeka area storm spotter frequency
3. Johnson County Fire/EMS on an 800 MHz conventional repeater???
4. Old KCKPD frequency in use.
5. KHP Centralized Dispatch progress
6. Tornado Alley federal frequencies
7. Skywarn frequencies for KS & MO
8. Kansas State 800 MHz EMS freq in use???
9. Bonner Springs FD radio number changes
10. Gladstone MO frequencies & some Secret Service stuff
11. KC Royals and more Secret Service info
12. Topeka area DEA
13. KCK/BPU trunked system
14. Bad joke

---

1. Larry, a firefighter from Topeka, sent an e-mail indicating he had discovered our Kansas Column, and had the following to offer about the Topeka FD.

Topeka FD has:
12 stations
12 Engine Companies
6 Truck Companies (2 aerials and one snorkel)
1 shift commander (car 101)
2 battalion chiefs (car 102 and 103)

Company call signs are by stationï¿½"1 engine," "3 truck," etc. On all fire alarms TFD dispatches 2 engine companies, one truck company and a Battalion Chief. When they are running as a first responder on a medical call they send a single company. Just recently they began sending a second company on all injury accidents. The second company responds code 2 (no lights or siren.) Larry says that procedure's value is still being analyzed, but he seems to think it will remain as policy. He mentioned that many times the company on the scene would order a second company for extrication, so they decided to start sending the second one automatically.
On alarms, the first company on scene sizes up the fire and declares it either a signal 1 (using water from the tank on the apparatus) or a signal 2 (using water from a hydrant.)
TFD uses the normal 10-codesï¿½10-4 acknowledged, 10-8 in service, 10-9 return to station, 10-42 training out of service but subject to call, and 10-7 out of service.

Larry describes Topeka FD as having a very aggressive attack policy which yields a high percentage of saves. They believe that you must take it right inside to the fire to put it out. That reminds me of a story I heard from one of the old timer dispatchers at Johnson County Fire/EMS dispatch when I worked there a number of years ago. Prairie Village had a large, old school catch fire one night, and they sent about everyone in the area to fight it. Anyway, they ended up calling for a mutual aid response from a KCMO FD company just across the state line. When it arrived, it didn't just park on the streetï¿½it jumped the curb, ran over a fence so they could get near the fire, the firefighters bailed out and commenced squirting some big-time water. When the firefighters from JOCO saw that, all their hats simultaneously shot about 10 feet straight up in the air in surprise. You just do not do that in Johnson County. I guess KCMO is like Topekaï¿½if you are going to fight a fire, you gotta get up close and personal!
Larry, thanks for the info for Topeka. If you have any more for us, be sure to let us know. Perhaps you could tell us what kind of special equipment TFD has, like boats, extrication tools, specialty vehicles, or even where each of the stations are. Anything is appreciated.

---

2. Larry says to listen to 146.670 for the storm spotters for the counties of Shawnee, Wabaunsee, Osage and Jefferson.

---

3. Gary from Johnson County has heard some simulcasting of Med-Act on 867.1375. This is not one of the 10 trunked frequencies on the JOCO system, although it is assigned to JOCO. About a year ago I spoke with the radio man who said that frequency and a few others will be used for data and/or automatic vehicle location. When I spoke to one of the dispatchers there today, he knew nothing of it. Way back when I talked to the radio man, they were simulcasting some of the SO traffic on those frequencies in order to test for coverage. Maybe they are doing the same thing now. I will do some snarking around to see what the deal is, and then let you know.

---

4. Steve from Wyandotte County knows of an abandoned frequency that has been picked up and is now being used. Before Kansas City KS went to 800 MHz, they used 155.430 for one of its PD frequencies. That frequency is now utilized by the Wyandotte County Detention Center in KCK at 701 N. Barnett. Steve says it is real active, and it is a 50 watt base.
Steve also sent a joke, which will be added at the end of the column. It is even more terrible than the one from last month.

---

5. From Dale and Ray, KHP Troop C has made the move to the new centralized dispatch center in Salina. It officially took place at 1000 hours on April 15th. The end user radios are essentially the same, but the consoles are all new Centracom Elite models with Windows NT running

all the computers. The old manual switches for selecting towers have gone away, and it is all done on the computer touch screens.
Right now there are only 2 "live" consoles out of the potential 14 positions. Obviously they will turn more on as more dispatch responsibilities are switched over to the new center. A computer aided dispatch system is under review, too.
Dale got to see one of the GPS/AVL (Global Positioning Satellite/Automatic Vehicle Location) units. They kinda sorta double as an MDT (Mobile Data Terminal,) too. The cars have a small flat GPS antenna mounted on the trunk, and the actual unit is a small box with a row of buttons, each labeled with a 10-code. Push the button and it signals dispatch with the appropriate message. The codes listed are 10-7, 8, 10, 19, 23, 24, 44, and 45.
10-7 out of service
10-8 in service
10-10 subject to call
10-19 at station
10-23 arrived at scene
10-24 finished with last assignment
10-44 traffic stop
10-45 check occupied vehicle
Last, it is reported that lots of 800 MHz stuff will be going up in Troop C this summer. Those of you out there need to make sure you have that stuff poked in the scanner. It was a hoot listening to the systems come on line here in the east part of the state, and it will surely be just as interesting in the rest of the state.
Thanks to both Ray and Dale for the update.
---
6. Dale has a couple of great freqs for us Kansans. They are the severe weather/tornado chase team frequencies for the Severe Storm Lab of Norman, Oklahoma. The primary channel is 165.435, which is a repeater that is physically in the airplane. A car to car freq is 163.100.
---
7. When someone sends an e-mail to me with column info, I copy the text and save it to a file for the upcoming month. When I copy it, I always try to keep the contributor's name at the end so I can give credit to that person. When the end of the month comes near, I begin editing and re-arranging it into a hopefully pleasing format. Unfortunately, the next section got copied without the name of the contributor, and I cannot remember who sent it, so proper credit will not be given. Whoever you are that sent in the following stuffï¿½Thank You!

These are the SKYWARN radio frequencies used during severe weather across our area. (-) Minus = minus offset and (+) Plus = plus offset.

Kansas

County Frequency
Johnson 145.470 -

Leavenworth 147.000 +
Linn 147.285 +
Miami 147.360 +

8. Gary wrote, "On Saturday 4-4-98 at about 1300 hours (in the Johnson
County area) I heard a helicopter pilot talking to a hospital on
867.9125 which was included in the last Kansas Column as an EMS
frequency for the state, I believe. It sounded like he dialed up the
hospital in some fashion. I was actually at work in my office with the
scanner on and was really only paying half attention at first until I
looked and saw the 800 frequency. I do not believe it was any kind of
cellular bleed-over as it sounded normal and was quite clear on my
9000xlt." Anyone else heard anything like that? I need to stick them
in the scanner and let the computer do some logging of hits on them.
Thanks, Gary

----
9. Wild Bill went to a storm spotter meeting in Bonner Springs the first
part of April, and he heard the following bit of scoop: "One bit of
useful info came out of the Bonner Springs meeting tonight. Soon (next
week?) all BSFD radio numbers will be changed. Gone will be the "516"
"517" and the like (ending in "teen"). They will be replaced by numbers
in the "25XX" series such as "2503." Supposedly this is to eliminate
like sounding numbers ending in "teen" and to aid the new CAD system.
My gut says something else may be afoot. When I get a copy of the new
number assignments, I will pass it along."

Hey Bill, let us do pizza some Thursday night. I have them off for the next month or so. Gimme a call.

---

10. Tim, a self proclaimed scanner freak for over 15 years, is also an Electrical Engineer. He is one of the lucky people that can make money while "playing." He scans from Gladstone MO. One comment he made needs repeating. He says that he has been enjoying all the effort in getting Kansas City MO and Overland Park KS PDs to be listen-able again. (They are on those pesky Ericsson trunked systems.) Dr. Smoke (Bob) is doing a fine job, along with a number of other folks involved in the effort. (I second that statementï¿½Andy) Dr. Smoke has a great site with lots of good scanner poop. Try it out. http://www.crcltd.com/sm0ke/scanner/
He had the following to say about Clinton's visit to the Kansas City area a few weeks ago. "With the President in town, I sure found a lot of DES on 165.975 MHz, it may have been a splinter like 165.9625 or something. Also I found some DES on 165.475, again could have been a splinter channel. Did not hear any voices but I am sure they were there. I need to get my library back up to date on ATF, Secrete Service and DEA. If anyone has a good list with the channel designations that would be cool." Anyone got a recent list? If so, send it in and we'll get it out there.
Here is what Tim had in reference to scanning in Gladstone. "As far as Gladstone proper, the city uses conventional GE 800 MHz repeaters, City Services on 851.4875, Police and Fire 853.6375, 854.6375 and 854.6875... Clay CO Missouri uses high band simplex 155.655, 155.700, and obviously MO Sheriff Net on 155.73 along with intercity systems on 155.475, 155.37. 154.95.
The last thing he had was this question. "I wonder if the group would like to keep a running list of frequencies on the FTP database here? That would make it easy to get information..." I assume Tim means Dr. Smoke's site. I do not know who actually does all the work on it, but I think it is a great idea. So, if whoever is in charge of that would let us know:
A. If they want to do it
B. What format would be best for submission
C. Where to send it.
Good idea, Tim. Thanks for the information. (Tim said to try to get in touch with him on his repeater, frequency 443.6500. His call sign is KA5RYF.)

---

11. David wanted some frequencies for Royal's Stadium in Kansas City. I dug up a few from the Internet and here they are.
463.450
464.875
467.825
When Clinton was in town, he also monitored some USSS traffic. He wanted to pass along the frequencies on which he heard traffic.
165.375

165.925 (DVP)
166.200
David has a question similar to Tim'sï¿½he is interested in a comprehensive list of federal frequencies. I know some of you are out there, so let me know and I can either get it in the column or I can get you and David in touch with each other for the exchange. That is what this group is all about, you knowï¿½helping each other enjoy the hobby.

---

12. Mr. Anonymous sent some info about a new DEA repeater in the Topeka area. Listen to 418.9500 and see if you can pick it up, also. Most of the tags that they have run come back to Topeka addresses. Just pray you do not hear your own tag on that frequency!

---

13. Dave called and said that the KCK/BPU trunked system merger is complete. I poked in all 17 frequencies and have had only a few minutes to listen, but it is true. At work yesterday I had the chance to talk to one of KCK's dispatchers, and they were cursing the system...said it wasn't working real well, but that it was just some "bugs" that would soon be worked out that were causing the problems according to her. Another friend of mine (Greg) is starting to make a list of new talkgroups. He says the new ones are all for BPU so far. Check out the March 98 column for the frequencies, which are archived on Dr. Smoke's web page at http://www.crcltd.com/sm0ke/scanner/

---

14. From Steve (He is to blame for this one, not me!) "Recently the local newspaper held a contest for the best pun. Having a rather generous reward for first place I submitted 10 of my best works. I felt sure that at least one would do the trick however 'no pun in ten did.'" Groanï¿½

As I was tunneling through my office today, I discovered some more good stuff for the column. It was a little late for May, but it will make it in June's edition. So...that is it for this month. Thanks to all that sent items for the column. It was a treat to have so many contributions. Makes my part of the deal much easier! Andy

P.S. Mike has a request...here it is: "I am looking for the X-mit and PTL frequencies for Hoisington EMS, Fire, and Law enforcement. I work in EMS and pass through there often and have worked several accidents there. Can you help me out? Also if you could use any frequencies for Harper, Barber, or Summner Co. let me know." I will send Mike what is here from past issues, and if anyone else has any info on the above agencies, send them to me and I will forward them on the Mike.

I have two Bearcat 2500xlts, 400 channel scanners. Both scanners are in pristine condition with no problems or scratches whatsoever.

They both come with the manual, and a rechargeable battery pack. I also have one box, one charger, and a new extra new battery pack. I will throw them in with the full coverage radio..

Full coverage - $275 firm + actual shipping.

The other - $200 firm. + shipping (This one has not been modified. The date code is OIG).

CTCSS is Continuous Tone Coded Squelch System. That is the generic name for what Motorola calls "PL" (Private Line), GE calls "CG" (Channel Guard) and what RCA called "QC" (Quiet Channel) when they were still in the two-way business.

What CTCSS does, it only opens the reciever when the reciever "hears" a special sub-audible tone, and then allows you to hear the voice.

3501. Help : Wider freq-range on a IC-H16T

Newsgroup: rec.radio.scanner
Date: 1998-05-02 00:00:00 UTC
From: Kenneth Dalsb&#65533; <kdalsboe@online.no>
Message-ID: <01bd7601$8cc04e60$LocalHost@kenneth>
Source record: 161591

Hello .

Is there anyone who knows how wide frequency-coverage I can get on an IC-H16T , with the "European MRH 45 software" ? (The same software that is used on the IC-V200T models here in Europe , and the MK II models)

With this software , I have 100 channels , and the frequency coverage at the moment , covers between ca. 100 MHz to ca. 180 MHz , but I would really like to expand it as much as possible .

I have sent requests for this mod. before , but I still haven&#65533;t got any answers , or help .
But I just have to try again . Maybe anyone who knows how this is being done , reads this message , and maybe could help me .

Please mail me if anyone knows how this is being done .

Thanks in advance .

kdalsboe@online.no (PS . I know the access code for programming , and its not the 159357 code)

Hey there...

I have the following items I will either trade as a whole, or in part. I am looking for a dual band HT, but would also be interested in a scanner, or ??? If you have anything in mind, please email.

1. Uniden PRO 810e Base AM/LSB/USB 11 meter rig. RF Gain, Mic Gain, Clarifier, HI Cut noise filter, S/RF Meter, build in power supply. Can be converted to 10 meters. Also has a BRAND NEW hand mic. As a bonus, I'll also throw in a new RS SWR/Power Meter. All in excellent condition, virtually no scratches.
2. Realistic HTX-202 Portable HT w/ battery pack. PL En/Decode, DTMF En/Decode, etc. Good condition with rubber duck antenna.
3. Two Motorola Spirit Monitor Recievers. Both in very good shape and both with NiCAD batteries and charger. Currently set to 138.325 MHz, can be set anywhere 138-174 MHz.
4. General Electric UHF Business Band HT w/ NiCAD battery. 2 watts, 2 channel capability. Channel one programmed to 466.437 MHz. Channel Guard feature (PL En/Decode). W/battery, UHF Rubber Duck, and belt clip. Fair Shape, works excellent.
4. Motorola TeleTAC 200 Portable "Pocket" Cellular Phone w/ NiCAD battery AND Car DC Power/Charge Cord. Very good shape, works great.

Would be willing to trade anything here for ???. Please email. Thanks.

The "Park Net" frequency is 172.650. This covers park-wide communication via several repeaters. The "Valley" frequency is 166.300. This is for Yosemite Valley use and the El Portal sub-district via the 'turttleback' repeater. "Channel 6" or the "Common Channel" is 168.350 and is used for car-to-car or local use such as flagmen in construction zones.

John:

I've owned both, and currently own the PRO-64. They are both excellent scanners! The PRO-64 gives you the option to dump frequency list into it via your computer, and also has several programmable search banks!

Bill Crocker

john coelho wrote in message
<6ie0qo$r6h$1@newsd-142.iap.bryant.webtv.net>...
I'm looking to purchase one of these scanners. Can anyone tell me if one is better than the other. There is only a $20 price difference. I noticed that the Pro-67 recieves extended freq. from 960-1000 MHz that the Pro-64 does not. Is there a need to cover these frequencies. The Pro-67 skips some freq. in the 800 MHz range. I'm assuming that the Pro-64 is the better choice. I would appreciate any help.
Thanks in advance, John

I just purchased a battery pack from radio shack for my scanner. It says to charge it with a 300 mah charger for about 15 hours. Does anyone have any suggestions on
using a different charger to reduce the charging time. Any other suggestions on using abattery pack would be appreciated.
Kerry Finch

The 300 MA charger is just a source of DC. The battery pack has regulation in it to limit the current & prevent it from charging too quickly. Unlike raw cells, which can be quickly charged by a rapis charger, most dedicated battery packs charge at one rate until you go far enough over the volatge/current rating to fry the regulator circuit & ruin the pack.
Some battery packs for commercial two-way HT's actually have separate contacts for slow or rapid charging, with different thermistor circuits inside for each one, to prevent damage to a similar looking battery inserted into the wrong charger.

I doubt the battery pack purchased at RAdio Shack is more than a raw cell pack, in which case, you must monitor for overheating of the cells if you charge at a higher than recommended rate. Gassing NiCds is a good way to shorten their life span.

I have a RS Pro-46 and I'm having some problems with it. The scanner will not maintain it's stored channels. As soon as I turn off the scanner, within 10 seconds
or so, all the stored freq. are gone. When I turn it back on, it runs like its was
reset.

Can anyone shed some light on this situation? Can it be fixed?

Any help will be greatly appreciated.

Thanks in advance,

Bob Breitling --- xbreitling@aol.com

You need to come up with a name that keeps it scanner/ham related. I am
seriously concerned that if you used that monicker, you would soon be infested
with Limbaugh/Liddy/Sterns fans.

Then there was the runner-up: An infinite number of rednecks riding in an infinite number of pickup trucks fire an infinite number of shotgun rounds at an infinite number of highway signs,
eventually producing all the world's great literary works in Braille.

My Yaesu FT50R, if modified, would also double as a very handy marine radio when I go on my boat. Too bad it's not type accepted.

The FCC relaxed regs on marine radio licenses because it's been fairly proven that having a VHF marine radio on your boat is better for everyone. They don't require it for all vessels but want to encourage as many people to have one.

I have a 13' Whaler that I take on the Hudson River once in awhile. I won't shell out for another VHF handheld marine radio. But if I could have marine radio capability with a resistor clip here and a solderblob swipe there, it would be useful. And - you never know - could save a life or two.

That was really stupid. Why don't you just post your social security
number too?!

BOWERS, BLAKE E
13xxx ST xx 17
Wxxx xxxxxx, MO 6xxxx
(4xx) 2xx-xx77

This is what comes up under KD4RME, and is why one does not post one's
call sign when he is trying to antagonize and troll on a newsgroup.
Your lucky I'm not mean enough to post it uncensored.
You DO know that you can get that license taken away from you now that
you publicly showed that you do not know the rules! I would suggest you
call the FCC at their toll free number and ASK them about this issue.
Read them the part I posted, and have them explain what it means to you
since you missunderstood it.

Provincial Parks in Ontario are run by the Ministry of Natural
Resources, so you will find park activities on frequencies
allocated to them. If you check out Ron Katz's popular page, you
will find the info there. Ron has a page specifically dedicated
to the MNR. He lists all their frequencies, and if you scroll
down the page you'll find a listing for Pinery.

: If my memory don't play with me, I recall to once have seen an
: instruction how to modify the Icom IC-H16T to obtain a wider frequency
: range up to the UHF band, even if the IC-H16T basically is for the VHF
: band (standard range about 110~180 MHz).

: If someone else recall to have seen a such instruction, or maybe know
: how to do that modification, please notify me ASAP.

: BTW, the IC-H16T is a damn good radio. Too bad from my point of view it
: is no longer produced, and I find that the substistute (the IC-Fxx) is
: inferior to the previous one in different ways... :-(

: PS. As I currently don't read this NG on regular base, please reply by
: e-mail. Thanks. :-)

This is unlikely-the H16 is not "wide as a barn door" for a reason..the
unit is already quite broad, and trying to extend it beyond that point
would probably result in poor results(and it probably would void the
radio's type acceptance).
If you need UHF, then get the H16's UHF twin brother, the U16.

3541. AR8000 or AR8000B scanner

Newsgroup: rec.radio.scanner
Date: 1998-05-03 00:00:00 UTC
From: stagehand@act3bbs.com
Message-ID: <6iiggc$cr6$1@nnrp1.dejanews.com>
Source record: 161458

I understand that the AR8000B scanner is full scan, less cellular, and for some time before being removed from the market, the AR8000 was sold with less cellular, restorable. Now, my question is, now that the AR8000B is out with, less cellular is it too restorable? I ask this with no interest in listening to cellular, especially since most, if not all, is going to digital and won't be scannable (easily). Where my concern is is there anything in the 800 - 900 + mhz area that will be missed? Or, in other words, what is going on there that someone doesn't want others to listen to. The little bit of cellular I have heard is boring at a minimum, so the protection of this area seems odd at best.

If all the above seems paranoia, is the 800 - 900+ mhz going to be restored once all cellular moves to digital?

My major interest is in listening to the TACK channels on the police freqs. It never fails, I will be listening to local happening and dispatch will come on and tell the parties to switch to TACK whatever and I'm out of the loop. draq

Thank you for your time..

You might find that the BC235xlt would be better to have than the
BC230xlt. The 230xlt is a nice scanner...but it is only dual
conversion. The 235xlt has trunk tracking capabilities, more channels
and is a triple conversion scanner. Several places would have the
BC235xlt, especially mail order.

3549. Help with MDT program

Newsgroup: rec.radio.scanner
Date: 1998-05-03 00:00:00 UTC
From: rhclayton@aol.com
Message-ID: <1998050320165100.QAA20428@ladder03.news.aol.com>
Source record: 161466

Hey yall. I am not the computer nut that I should be, but I am an absolute radio freak. I recently came across the program and all the attatched"stuff" relating to the MDT reading program. Well after spending all of Saturday,Saturday night and Sunday building the interface, and tapping into the discriminator, I was in a bad mood. I got some sleep and then tried to run the program. Needless to say I was about to blow my wad thinking that I was about to see some little messages dance across my screen. I have tried to run the program in DOS. I need help.This is what I have accoplished,
-The interface box has been biult, and checked a few times for connections, etc
-The disriminator and ground from the scanner is in good form.
-The cable in in com 1, yes I have tried com2, to no avail.
-I am in real DOS, not the DOS window inside of Windows.
-I have a good commecial mag mount 800 antenna hooked up, and am recieving good, strong signals from both the Ardis network and the Houstom PD's MDT freq's.
-I Have the program unzipped and in DOS.
-I am losing my mind!!!
When I type driv1234.exe, I get that "access denied" prompt. But if I put mdtstuff, i just get a flashing cursor, which tells me something is going on. That's what my situation is. Any help would be greatly appeciated, as I don't want to lose my interest in this great hobby of ours.

>or usb)by theyupiteru mvt 7100 scanner. how are the receptions and
>whataboud dx?

I would call it useable. I use mine on hf quite a bit and can hear most
everything I want to. Ham SSB signals come in pretty well, but the filters
are a little wide.

AM stuff comes in pretty well too. You can listen to most of the major
broadcasters with it.

I would not call it a DX rig though. If you connect to an antenna that is too
large it will overload easily.

Good luck,
Ed

3552. APOLOGY - PHOTON MICRO-LIGHT II

When I worked for Rat Shack in 1993, commmissions did drop during the X-mas shopping season... the premise was that the salesman didn't have work as hard to generate more sales and the theory was that they would make more $$$ anyway.

Of course, that year, a home electronic's discounter, Yes!, opened up next door to our store and our store took a serious beating. 'Twas a lousy Christmas - although we did good in selling cables and adaptors for the goodies bought next door.

> That kind of policy makes it tough for the stores to hire competent
> people, who are willing to help.

They're obviously doing something right... still in business. I suppose the same thing as pricing applies to service - the level of compentency is what the market will bear.

> Remember the old days, when the best scanner frequency lists were FREE
> handouts at the local Radio Shack?

They only undermine the sales of Police Call. The lists have gone the way of free maps handed out at gas stations, but they're more than happy to sell you a Rand-McNally atlas for a nominal fee. I remember in the days of free maps, you got gas at a _service_ station. Service has been sacrificed in the name of profits... apparently something the marketplace has tolerated as well.

One day, I was playing with one of those Sprint PCS phones... using it to call my cellular just for shits and giggles. The salesguy was doing everything in his power to sell me the PCS phone when it was quite evident that I DIDN'T NEED ANOTHER PHONE!! Ugh!

The Dept. of Labor should outlaw commission pay. I'm tired of the vultures circling the sales floor.

3557. How to get a Digital Scanner/Radio

Newsgroup: rec.radio.scanner
Date: 1998-05-03 00:00:00 UTC
From: regult@aol.com
Message-ID: <1998050323060100.TAA08847@ladder03.news.aol.com>
Source record: 161474

Here is how several people I know have gotten Digital Scanners/Radios:

1. If you suspect that your city is going to go to Digital soon, start performing a service for them for free, like become that cities unofficial Videographer / Photographer. You'd be surprised at how easily you can get a Digital Radio from your city when they go Digital after doing alot for them.

2. Hang out at the repair shops of your favorite city. Sometimes the surplus equipment is sold out the back door of the city shops. I know this for a fact, when several small 3 wheel Cushman traffic patrol vehicles were scrapped out, the people in the shops sold the newly installed Digital radios in them for, sit down now, $25 each.

Several people I know monitor this major city using equipment obtained in this manner. Plus, there are Radio Hackers out there that can reprogram these radios so that if you get a police radio, they can hack into it and make it receive fire frequencies. In fact on the fire department handheld radios, there is a missing talk group, the station alert one. Now when a call comes in you can hear it when the station gets it, instead of waiting to hear the dispatcher say where it is.

As a side note, the major city in question here is doing a favor for the local Fire Buff organization. They are simulcasting on an old VHF fire channel, so that those without radios can at least pick up fire department dispatch, you can't hear the moblie units, but its better then nothing, so you may want to join you local Fire Buff's and petition your city to simulcast, if you are interested in police, I guess you're out of luck unless you can get a radio by using one of my two pervious mentioned ideas.

Wait a minute, let me get this straight, the people in charge of commo
in this fictional city, allowed NEW, presumably Motorola Astro(tm) radio
equipment to be classified as 'surplus' and then given away for next to
nothing ?

Unless these units were piece of shit EDACS radios, being replaced by
Astro equipment, I find this story very hard to believe. Please cite
the city in question. Has I'm sure some heads would roll if the powers
that be discovered this situation.

Most police agency brass take great care when accepting new radio
equipment, and are very twitchy about making sure all new incoming
inventory is accounted for. Particularly when a subscriber unit could
conceivably cost them in excess of $2 grand a piece.

Your story must be a troll. or I want to sell a bridge to the moron
who gave away a brand new Astro Saber III or XTS-3000 for $25....
Talk about 'civil servants' !

Who defines proper expression? My reaction to the post was
"My sentiments exactly." Would you or I (me?) choose those
words in a reply? Nope. Is it okay that he chooses that wording
to express himself? Reckon so. This ain't no place for aplomb.
By the way, thanks for your contributions to the group. It's
refreshing to see the enthusiasm in your posts. Please remember
that as of now, no rules exist. I hope they never do.

I think it's the mentality of the people nowadays....while no one should
have to suffer abuse of any sort, in the good ole days, the mentality
was keep the dirty laundry in the house.
Now, with the "society will take care of me" attitudes...they have no
problem calling local police.
I think this is why we here more....but I don't think it's wrong.
Abuse shouldn't be tolerated....

Yup, The temp seems to get to alot of people lately. Here in S.E. Indiana the temp`s not that bad yet, but the roach motel & trailer court people seem pretty upset `bout something. We are called in around 6 to 12 times a day everyday to break up or dis-arm idiots over some of the most stupid things I ever heard of. I now know where Jerry Springer gets his guest.

Takes all kinds I guess.

I got a cheapo Radio Shack Airband radio (one of these $25 things). Of course
w/o squelch.
Does anybody know of schematics or a complete board I could add to it?

Can anyone enlighten me on how to add squelch detect to the compter control cable I have for my R-10? I'm controlling the radio using the cloning cable and a home brew adaptor to reverse tip and ring from the radio. I dont think that the CI-V port uses ring, so could I use this somehow to get my receiver to stop on an active freq?

Thanks,
Keith

Dave, tell us a bit more about your location; are you stuck with not being able to put an antenna outdoors? Are you even using an outdoor antenna, and if so, which one? Often it is better to improve your antenna than spending mucho bucks on a different radio.
If you can put something outdoors that's not too obtrusive, a 1/4 wave ground plane in a good clear spot fed by good quality coax will go a long way to help you out. But that of course isn't the only antenna; I am about 15 mins from BWI and I frequently hear the planes replying on the a/d frequencies with a simple vertical dipole.

Message-ID: <354cc449.106848940@news.mindspring.com>
Source record: 161521

Thanks to another sympathetic webmaster, the Open Broadcasting cause now has yet another banner option for those of you who maintain a scanner or public safety related web page.

Both banners are available at http://members.aol.com/truth4000/page1.htm and can be copied and linked back to the Calling All Citizens web page if you find this to be a philosophy compatible with your own position.

Open Broadcasting advocates the open-airing of certain police radio traffic for the good of the community and the healthy state of government. These banners are of particular interest to those whose areas are converting to trunked or digital radio for public safety use.

3583. Re: Minnesota Permit

Newsgroup: rec.radio.scanner
Date: 1998-05-03 00:00:00 UTC
From: Kel Krosschell <kitenut@millcomm.com>
Message-ID: <y3Q21.69$6H6.1172078@nntp1.nac.net>
Source record: 161522
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Following is from MN BCA website:
http://www.dps.state.mn.us/bca/permits/bcapmts.html#mobile

Mobile Monitor (scanner) Permits
The Bureau of Criminal Apprehension issues three types of Mobile Monitor Permits (Minnesota Statute 299C.37); Individual, Non-Law Enforcement, and Media.

Exceptions
Full time peace officers do not need a Mobile Monitor Permit.
Persons who have an amateur radio license do not need a permit from the Superintendent of the Bureau of Criminal Apprehension. If they have an amateur radio license they can monitor anything they want to monitor in their vehicle. They must carry the amateur radio license in their vehicle when they are monitoring the scanner.
The Individual Permit holder is allowed to monitor only those agencies that he or she has authorization letters from. For example: if an Individual Permit holder has a letter from St. Paul Police Department, Minneapolis Police Department, State Patrol, Ramsey County Sheriff's Office and Anoka County Sheriff's Office, these would be the only law enforcement frequencies that the permit holder could monitor. If he or she was in northern Minnesota the Individual holder would not be able to monitor law enforcement frequencies there. These authorization letters should be submitted to BCA along with the Individual permit application form.

A Non-Law Enforcement Permit holder can monitor non-law enforcement frequencies throughout the state. Such frequencies include: fire, ambulance, weather, trains and airplanes. The permit holder must get one letter of authorization from the Chief or Sheriff in the town or district that they (the holder) live in. This letter should be submitted to the BCA along with the Non-Law Enforcement permit application form.

The Media Permit holder submits his or her Media application to the BCA along with a letter on station letterhead, (stating that the person is a full time employee of that station) and a list of frequencies they wish to monitor. The BCA sends a letter to each frequency holder on the list stating that (applicant's name) from (TV station, radio station, or newspaper) will be monitoring their frequency(s).

Renewal Process
In the Fall of every year letters are sent to the Chiefs and Sheriffs with a list of Individual and Non-Law Enforcement permit holders for whom they have signed authorization letters. The Chief/Sheriff has the option of letting the person's permit be renewed or having them reapply. If the Chief or Sheriff does not respond, the individuals on their list are renewed

automatically. The Chief/Sheriff may call, write or send E-Mail to the BCA
to advise whether an individual's permit should or should not be renewed. If
someone will not be renewed, a letter is sent to them stating that they have
not been renewed. If that person wishes to continue having a permit they
must reapply for one. This process pertains to Individual and Non-Law
Enforcement permit holders. Media permit holders are renewed automatically.

>purpose.

460 Mhz is being used for some telemetry and signal control functions.
160mhz region is for AAR compliant Radios for Train and Engine
operations. Also using some in the 900mhz region for train control.
Any general purpose vhf scannner should cover the RR frequencies just
fine and as an added bonus you get the NWS frequencies as well near
162.55 mhz (There are several)

WRONG! Your local salesman probably didn't put those channels in. Your scanner is very likely used! Someone probably returned it after a week or two and the sales droid put it right back on the shelf like they do countless times every day.

WRONG. Maybe in your neck of the woods they're sales droids! He's a HAM. I called him and he said he programmed it. At work, he has three scanners on his belt with clip-on speakers on his collar. He's the most knowledgable Rat Shack guy I've ever met. I won't go into the store unless he's there.

Here's a concept Badboy: punctuation. Are you trying to be the next Joyce, or are you just trying to be a bad imitation of William Faulkner? Better yet, in your next post, will you combine 17 languages into one? <vbg> (In case you didn't know, vbg means 'very big grin')

In answer to your question, you plug your scanner using a pc-link cable to your computer, and download software that lets you control the scanner from the computer. You can check out Radio Manager by a guy named Ben to see what I mean. It is a great $40 shareware program - just hope a complete 32-bit version comes out or is out.

I will to make it available when I feel that it's worth putting out. It's been a long slow process trying to finish it properly. Mainly, the problem I have is time (not enough of it.) I have three young boys who demand all my free time (as one is doing as I write this). The other issue is that the program is a DOS application and some of the beta testers had some issues on getting it to run correctly under Win 95 (mainly sound card problems). Hence, I've held off on releasing it until I could rewrite it as a Windows application. Again, the problem has been getting time to come up to speed on Windows apps programming. As luck would have it, I've been selected to attend a C++/MFC programming class for Windows at work starting on May 6.

When I port the program to Windows, I'll probably do a redesign and add support for the 895XLT and trunking. However, all of the program features that I listed before are in a working DOS application and are not just wishes or vaporware. I'll try to resolve the Win 95 sound card issues and finish the documentation. Then I'll have to create a web site to make it available for download.

So, just give an old dog a little bit of time to learn a new trick (Windows programming) and we'll see what comes out.

>
>
Here's my two cents on safety and speeding, from a truck driver who spends all week and many, many, hours on the highways.

1st people speed because everyone is always in such a hurry and don't pay attention to what they are doing (driving). I have seen women putting makeup on, people reading books or magazines, talking on cell phone and writing stuff down at same time, sexual acts being comitted, and all of this while driving.

2nd Safety. How can it be safe to have two different speed limits for cars and trucks? Ohio, Illinois, and Michigan are good examples of where the speed limits are 65 for cars and 55 for trucks. To have a 10 mile per hour difference in the two speeds would not be safe in my opinion and would impede traffic.

3rd Speeding. Now I'm here to tell you I do not drive 55 in states that have 55 speed limit for trucks. Have you ever driven down an interstate for 200 to 300 miles at 55? It will make you tired very fast because you do nothing but poke along and pass nobody, there by doing nothing but stare out the window in a daze.

As far as speeding, I generally don't do more than 5 over the posted speed limit and the police won't bother you. And when in a town or city keep to the speed limit because the police watch there more closely than over the road, like interstates and between towns.

Just my two cents worth for what it's worth!!!

Although your posting was in alt.scanner.uk I assume you are in the
US.

Luckily for you Uniden make a Trunking/Tracking scanner in both
handheld and mobile varients. I guess your city uses ANALOGUE speech
on a DIGITALLY controlled trunked network. So you will still hear
them.

Buy a new scanner.

Here in Europe our emergency services will be migrating (Europe-Wide)
to a new digitally trunked GSM like network called TETRA. Then you
can chuck the scanner in the bin!

Last post I saw from them was about a month or so back. I believe they were claiming it was too much trouble competing in this business and they would continue to support existing customers, but they were not interested in procuring any new business.

Try doing a search on the news groups for the company name, you might turn up that message.

Good luck,
Bill Crocker

Actually, the use of any radio's by an entity of the Federal Governemnt (VA) can be approved even if they are not Type Accepted, due to the fact that the FCC does not control or have jurasdiction over the Federal Governments use of the radio spectrum. The FCC can only control the State and Local governments, and the private and commercial communications systems. All the Federal Government communications is controlled by the Office of Telecomunications which is part of the NSA and the Whitehouse. This is the same for all Military, and Paramilitary as well.

3613. Charter Boat Freq.

Newsgroup: rec.radio.scanner
Date: 1998-05-03 00:00:00 UTC
From: allsafe <allsafe@netwit.com>
Message-ID: <354CACDA.2F6E6AA8@netwit.com>
Source record: 161552

Went out on my Dad's off-shore fishing boat in Florida. He was using his marine VHF to monitor Charter boats out there with us looking for dolphin, (the fish, not the mamal-porpoise). He was monitoring channel 58 and 68 on his marine VHF. Pretty useful information; action, lures that are hitting, coditions, whatnot.. My Dad's boat has got all kinds of neat stuff. Color 3-D fish finder, Magellan GPS that is slaved to the boat's autopilot. When you find a school of dolphin, you just switch on the autopilot and push "mark" on the GPS. The boat immediately starts of slow ciricle to run through the GPS marked spot automatically. Captain leaves the helm and fishes with the rest of us. The radio stuff intriqued me. Different sort of banter. You're hoping to catch something of use to find and land the fish. They're pretty cagey about what they broadcast. One captain clicked on and started singing "Niiiickle and Bluuuuuuuuuue for my Ballyhooooooooooo!" (silver and blue skirt for the ballyhoo baitfish rigs?).

I thought I'd bring my Pro-39 w/cell mod next year. That puppy should be able to scan marine VHF, right? Dad just monitors one channel.

Does anyone have any info on reguarly used VHF channels by Charter boats? Do they use (or can they use) cell phones at 14 to 18 miles off-shore?

Any information (particularly in the Fort Pierce area of Florida) would be greatly appreciated.

>purpose.

460 Mhz is being used for some telemetry and signal control functions.
160mhz region is for AAR compliant Radios for Train and Engine
operations. Also using some in the 900mhz region for train control.
Any general purpose vhf scannner should cover the RR frequencies just
fine and as an added bonus you get the NWS frequencies as well near
162.55 mhz (There are several)

The squelch status is read using the CI-V command number 15 01. You will need a CI-V programming reference to see the exact format of the command. A summary of the available commands for the R-10 are in the R-10 owners manual.

The RadioShack Pro-26 would be a good choice. They are discontinued now, but you still might be able to find a store that still has one. If not they are pretty easy to find used. The Pro-26 will let you choose AM, NFM or WFM on any frequency. You will probably want a different antenna than the one that comes on it. The telescopic whip antenna that sells at RadioShack for $10 is a good choice. If you are using it in a vehicle, then split off your car radio antenna. That antenna will pick up well in that frequency range.

Source record: 161364

Geri, I have a few posts that I have collected over time that may be able
to help you.
Most of these frequencies were provided by Ed Boe.

For all you Chicago area scanners out there who can pick up this system
on their trunktrackers:

System: Chicago, City of
County: Cook
Type: II
Users: Police, possibly other city agencies

Frequencies:
856.9375 857.9375 858.9375 859.9375 860.9375

865.8875 854.9125 865.9875

Check out the talk group ID 41216
There has been some great activity on this channel especially at night
including a couple of interesting stakeouts and a pretty good car chase.

I didn't find a listing for them exactly, but I did find one for: Ford
City
Condominium Association. If they own it, you may find them on:
467.7625
MHz.

CPD does have a trunked (Motorola) system, but it is only used by specialty

units. All district dispatch is on the 460.xxx channels. CFD is on
154.130 and 153.770 with 153.830 for FG use. Cook County SO is on high
band, and the ISP is on a Ericson trunked EDACS system.

GO GO White Sox:
151.685, 461.200, 462.8125, 464.7500, 461.1625,
460.450 Chicago PD Zone 13-District 9

HOLY CUB:
463.5875 Parking, 464.5875 Operations, 469.3125 Admin.,
464.525 Vendors, 151.625 Ushers.
My Notes: 154.600 is always a good bet at most sporting events.
151.625 has been a good "Blimp" frequency in the past.

Helicopter (Police or News)
IL State Police...155.475, 155.460

Shadow Traffic...450.2875

Target / K-mart will vary with store location search in the
469.000 Mhz
range (if you give me the location, I may be able to track
it down)

UNITED CENTER:

468.8125 UnknownUnited Center Corporation
461.0875 "Channel 1", building engineers??
461.1875 "Channel 2", trades??
461.2625 building security operations
462.0375-Chicago Bulls;

Northeastern Illinois (college) Public Safety
All State colleges in Illinois use:
453.900 and 453.600. There may be some lesser used freqs,
but these are primary Pub Safety.
You may also check out 453.875

David -
So both you and Clifton Turner say its a CI-V command, which means its
implemented in S/W by reading the command and status data packets
returning from the radio. Works for me. Leads one to the next question
of : Why dont any of the software packages support this?

Thx for the replies...

3625. Freq. CD-ROMS

3627. Best portable scanner at any price

Newsgroup: rec.radio.scanner
Date: 1998-05-04 00:00:00 UTC
From: Quandt@webtv.net
Message-ID: <6im1hb$236$1@newsd-124.bryant.webtv.net>
Source record: 161368

I bought an AOR 8000 two years ago thinking it would be the best money could by. Frequency coverage-wise it was. It's ability to pull in ultra-far away police departments in Southern California didn't impress me. Even my damn Bearcat 3000 pulled in fainter signals. Now I'm ready to get a "trunk tracking" model to update my current arsenal of scanners. I don't want to make the same mistake as I did with the AOR 8000. What, currently available, is the best in frequency coverage, and ability to pull in faint signals bar none? Money is not an issue. Buying the BEST is.

Mark

obviously you have not tried this software (MDT) because it is for a serial
port signal,
not a sound card input. based on the accompanying .bat, it appears to the be
trunker platform
version of mdt.

I was hoping you'd have what you advertised - mdt for sound input...
oh, well...

3631. Re: Digital Scanners & the Death of the Scanning Hobby

Newsgroup: rec.radio.scanner
Date: 1998-05-04 00:00:00 UTC
From: Karen & Van Goss <kpvcgoss@internetpro.net>
Message-ID: <1kc31.169$KH.480962@news.randori.com>
Source record: 161406

Here is the basic problem. "Trunking" isn't just "Trunking"
and "Digital" isn't just "Digital". The local-county-state
Police, Fire & EMS agencies are moving to all kinds of
analog, digital, or mixed systems.
Examples within scanning range of me alone are;
Sweet Sixteen, EDACS, AEGIS, IDEN, LTR, SMR,
NexTel, SouthLinc, Astro, StartNet, SmartNet, SmartZone
APCO 25 Common Air Interface. And there are other systems
on the market that just haven't been sold here (yet).
To follow a conversation the scanner has to 'speak' the
systems 'language'. Everybody's system 'speaks' a different
'language'. I'm still shocked Uniden entered the market with
it's Trunk Tracker. Any idea how many people have demanded
their money back after buying one and it wouldn't listen
to who they wanted ? (Two local dealers alone handled 38)

3632. Indoor Antenna HELP!!!!!!!

Newsgroup: rec.radio.scanner

Hi all,I need to get better reception on my scanners,problem is,I live
on the first floor of a 4 story condo forbidding antennas!
I need either insructions for an easy homemade indoor antenna that will
definately boost reception,or any better ideas you scanning pros or
others in the
same circumstances can reccomend!!
Any ideas gratefully acknowledged!!Radio Shack sells a antenna,I beleive
its 44 inches,that plugs into the back of the scanners,Any idea if that
would work better than stock!! I mostly scan 450-480
and 800 mghtz. Thanks,Barry

Boy, if it's that bad, they must be seriously out of spec. That's
really nasty.

>that seems to peak around that area. That's why allowing 144.xxx
>+600 would be a real help. Get the receivers farther away from all
>the crud.

I hadn't looked for a LONG time, so I went up on 145.25 to check, and
all signs of any CATV carrier is gone. I dunno what happened to it,
since the crud up around 147.45 is as bad as ever. The cable company
installed fiber on the poles here a couple of years back, but I don't
think they've got it online yet. That COULD account for the lack of
crap at 145.25, perhaps.

>Plus the customers complaining about the video interference all the
>time adds incentive to CATV to keep the leakage down.

Ayup.

These are shit GE systems.... "AEGIS", is GE's version of encryption
(has been broken in the lab)

>IDEN, LTR, SMR,
>NexTel,

IdEn and Nextel are the same thing !! SMR's are a generic term for trunking !!
LTR is EF Johnson trunking. IdEn and Nextel employ spread spectrum modulation.
Astro uses FDMA and Q4FM(16) modulation.

>SouthLinc,

never heard of them ..... ??? anyone ??

>Astro, StartNet, SmartNet, SmartZone
>APCO 25 Common Air Interface.

All Motorola, with the exception of the CAI, which is an APCO
standard that Moto adhered to. The standard is designed to provide
COMPATIBILITY between systems from varying manufacturers. If a product
is APCO 25 CAI compliant, they should be able to communicate with
one another. (provided the rf decks are on the same band)

The provision also enables RD-LAP protocols for MDT data applications.
(ie. jack into an RS-232 port in a subscriber unit, and boom, you can
run a 3270 terminal as if it were connected wireline to NCIC leased
lines)

Source record: 161414

I just bought a BC760XLT ($100.00-- vintage 1989, acoording to the copyright date on the "manual". I was told by the seller that it is unblocked, but portions of the 806-956 mHz band produce "error" when programmed in. According to the manual, 825-845 mHz is cellular territory, but this 760 refuses access.
What's the story?
Dave

> starting to appear

Yup, there is certainly less and less to LISTEN
to out there on the airwaves. But there are still
as many signals, in a manner of speaking.

Your notions of a "digital" scanner may not be
well centered, though. See, there is no such
thing as a "digital" scanner and won't ever be;
not in the purest sense.

Radio waves are analog, period. All sorts of havoc
and consternation results when you try to modulate
an analog radio wave with a square wave: splatter,
spurious, noise, RFI....ad nauseum. In a word, you
can't do it. The closest thing to a digital radio
wave is the sending of Morse Code (CW) where a longer
keydown time is a "1" and a shorter keypress is a "0".
And that is only in a manner of speaking.....because
the actual bits don't mean 1's and 0's. But you know
that score. So suffice to say that since radio was
invented, operators have had a hell of a time of it
emitting clean signals with CW keying. And CW is slow
anyway....very very slow....like maybe 5-10 bits per
second, tops.

Digital and radio do not mix well.

But there are alternatives.....like Frequency Shift
Keying (FSK) where two tones are sent...one is a "1"
and the other is a "0". FSK signals, slower ones
anyway, sound a little like a warble. Faster ones
sound like pink or white noise.

But FSK is an analog means of letting RF carry digital
data. It still takes an analog receiver to intercept
and detect that data. For all practical purposes, all

receivers are alike down to the detector or discriminator, the circuits that actually pick off the modulation of the transmitted RF wave.

What happens after the detector or discriminator is not really a receiver function. It can be....like in the case of the audio preamplifier, squelch and volume control, and the power amplifier and speakers. But these latter functions are not an intrinsic part of a receiver. And they are not needed to process and deal with digital data.

For digital data, a different kind of processor is needed than preamplifier, controls, amplifier, and speakers. The baseband audio, before it is preamplified and filtered, need to be tapped and sent to a simple device that converts sine waves to square waves. That's easy to do with a single comparator IC chip.

From there, the digital data has no analog or receiver function whatsoever. It's all up to the computer and software to do the rest.

If some radios contain a microcomputer and software for this purpose, that is strictly incidental and not germane to this discussion. Trunked radios, for instance, have an on-board computer and software to do the decoding of the trunked system controller. So what?

We can do the same thing with a simple add-on circuit, and pipe the output of it straight into the RS-232 serial port of a PC. Then software on the PC can take care of the rest, every bit as much and effective as can the trunked radios.

If you are talking about digitized and encrypted audio, then you're on the money. We hobbyists will never be able to routinely break the DES/DVP encryption standard. Not in our lifetimes, anyway. So yes, we are out in the cold when it comes to intercepting and decoding encrypted signals of any sort, whether they're voice or data.

Fortunately, a lot of data signals are sent in the clear, sometimes because there is no need for security, and sometimes because the sender thinks no one is smart enough to decode his data. Data sent in the clear is as easy decoded as clear speech is understood by the ears and brain. Again, it takes only a simple add-on circuit, a PC and some software.

Some hobbyists are adamantly against invading their scanners for modification purposes. That's too bad. The manufacturers give us what they want to give us and we have to be happy with it. If you are one of those kinds of people, then you have little grounds for complaint, and in any event, your

gripe is with the manufacturers....who probably won't listen
to you.

If you don't mind invading your scanner, doing a little soldering;
and concocting some external electronics wizardry, then your
radioing days are numbered far beyond those who won't do it.

In effect, you CAN make your own "digital" scanner, so to speak.
Cost is negligible. Rewards are immense. And lines are clearly
drawn. You can't decrypt encrypted signals, period. You can
decode all sorts of ASCII transmissions, including cellular and
trunked control data, pager data of all kinds, Mobile Display
Terminal Data, amateur and commercial packet signals, FAX, CW,
and much, much more.......if you know what you're doing.

It doesn't take much to know what you're doing, but it may well
differ radically from anything you've ever done in the past. If
you are an old dog that can't learn new tricks....well, hell,
you do have a problem. If you are willing to learn something
new, then the sky is the limit.........

..until the government steps in, anyway. You see, listening
to cellular.....AND....decoding certain kinds of data signals
may be illegal.

: at the changes going on in all aspects of communications - be it mass media,
: consumer electronics, telecommunications, or whatever - you can only
: conclude that the world is going digital, and mostly for very good reasons.
: Anyone who agrees with this assessment would have to realize that it's only
: a matter of time before all comm's are digital. Yes, some agencies or types
: of services will change over slower than others. It will surely be years
: before everybody everywhere is digital - but it will happen.

My guess is that ham ops won't be going digital until plenty of digital
gear is available on the open market --- hence there'll always be someone
to listen to 8*) 8*(

But realistically - most scanners have 800 MHz now because there are lots
of 800MHz-on-a-chip parts available, thanks in large part to the popularity
of cell phones.

Eventually digital will trickle down as well, if it catches on - a lot of
services will have to adopt new technology to fit into the proposed
6.25KHz channeling scheme and companies that stand to make a **lot** of
money on protocol licensing, and service and maint contracts are working
overtime to make sure that that new technology is their flavor of digital.
I wouldn't be surprised if certain companies all but dumped digital detector
chips onto the market at some point in the next few years - the big money
won't be in the hardware, but rather in maintaining digital-grade systems
and selling firmware updates.

How many trunk-tracker owners now actually get excited when a local agency
announces its intention to go to a Moto trunk??? 8*)

If the scanner is truly a 1989 version, the cellular frequencies were
NOT blocked by law at production, but by Uniden corporate edict; I
believe there were at least two versions of the BC760. I have a version
with a Motorola jack on the back which is cellular restorable via the
lifting on one of the pins on the microprocessor chip and soldering
it to an adjacent pin. Tunes in 12.5khz steps on the cell band I
believe... unlike the RS PRO-2026 in it's earlier forms which would
do 30khz steps on cellular once it was modifed... the later model(s)
of the BC760XLT had a BNC jack (and then I assume eventually emasculated
of the cellular frequency restorability...)...

3651. Make your own antenna

Newsgroup: rec.radio.scanner
Date: 1998-05-04 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <6ikos0uhf1@garnet.mint.net>
Source record: 161426

So, you want to make your own antenna ? It`s not hard at all. I would imagine that you have gotten sick of paying high prices for commercial stuff, or that you live in a place with antenna covenants (no antennas allowed). Never fear. Let`s say that I would like to have a half wave antenna to pick up police transmissions, that is far better than the "rubber duckie" or "plug into the back of the radio" type of antenna, and will add miles to your reception range. This is simple to make, and is only going to cost a few dollars. The math is well known:
468 / center of freq band of interest (in MHZ)
This will give us the length of the antenna needed for that frequency band, in feet and fractions of a foot. As an example, we can do the police 155 MHZ band as follows:
468 /155 = 3.0193 feet
To get the fractional part converted into inches :
12 X .0193 = .2316 inch (a quarter inch is close enough)
Now, these formulas are all based on number 12 copper wire. Why do I mention that ? because the center conducter in a piece of rg58 coax (the smaller variety) is pretty close to #12. I say this because it is NOT going to be exactly 3 feet, one-quarter inch from the tip of the antenna to the radio connector on everybody`s radio installation, and probably shouldn`t be, for various good reasons !
For one thing, we are going to want to get this 3 - foot antenna up as high in the dwelling as we can. As frequencies get higher, antenna height is the name of the game if we want decent reception over a wider area. If we live is a two-story house, we want to get the antenna upstairs, and even up in the ATTIC if we can ! Every foot you can raise the antenna is gonna help. (I am not going into a big "line - of -sight" diatribe here.) Like the hams say " the higher, the better !"
I can hear you all asking the inevitable question now: "How am I going to put the antenna up in the attic, 20 feet away, and keep it to 3 feet ? Well, It turns out there is a way around this. That is why I mentiond coax cable. The antenna and coax are all going to be "of a piece".
Go down to your local radio shack, and buy a piece of coax with a connector on the end that matches up with your scanner. Got one of those "weird" mobile connectors, with the long prong ? No problem. Just buy an adapter that "adapts" the bnc twist-on plug on the coax to the weird mobil connector on the radio ! Make sure that the coax is long enough to reach from where you want to put the antenna to the radio plus some (fudge factor). An easy way to do this is to use a piece of string to measure the length to the antenna location, and then measure the string.
When you get home, take the coax and route it to where it`s going. Then go the attic (or where ever) end of the coax, and take along a good sharp knife (preferably small) and a small pair of scissors and a couple thumbtacks. Oh, and dont forget your tape measure. We are going to strip 3 feet (and

one-quarter inch if you`re a nit-picker) of the outer jacket and shield off the coax. Now, the shield is a lot easier to remove if you notice that it is like chinese fingers. Just push it back on the coax once you get the jacket off, and it will loosen right up. Give it a "haircut" right even with the jacket. It is not really neccessary to remove the insulation from the center wire.
strip a little of the insulation off the end of the center conductor, and "pin it to the woodwork" in the attic or on the wall or wherever you are. the idea is to string the antenna VERTICALLY, so DO NOT string it to the slanted roof rafters. It MUST HANG VERTICALLY. Pin the rest of the antenna to the woodwork to secure it, but don`t overdo. Purists may argue, but dry wood is a pretty fair insulator, and really won`t hurt reception much. Or, use electric fence insulators , if you must.
If you are in your living room. you might just take a butter knife and "tuck" the antenna part behind some molding in the corner of the wall, just for neatness.
Now, we have "maintained" the 3-foot length of the antenna in the following manner : the entire coax still has the shield on it, except for the part we stripped it off of. The center conductor of the coax cannot recieve any radio waves except where we stripped the shield wire. So the rest of the center conductor that is enclosed in the shield is electrically NOT PART OF THE ANTENNA.
Now we come to the troubleshooting part. Let`s say we have followed these directions to the letter, and we hear a lot more stuff, but it is noisy and weak. What we really need to do is ground the shield of the coax right near where it enters the radio. this is not as hard as you think. strip about 1/2 inch of the outer plastic jacket off the coax, WITHOUT CUTTING THE COAX. This will expose the shield wire underneath it. Now, find a piece of wire that will reach a nearby elecrical outlet (no, we are not going to "zap" the antenna, Viginia). Strip the insulation off about 2 or 3 inches of the wire, and wind it around the exposed part of the shield on the coax. Now, Take the center screw that holds the plastic face plate on the wall socket, loosen it up, and slip the wire under it. Tighten the screw up again. Probably as you tighten the screw, the noise will clear right up, and you will hear LOTS more. This is ESPECIALLY true of scanners that are being run off 12-volt power supplies, since the supply`s transformer "isolates" the scanner from ground. This is probably the sole reason why so many of these indoor antenna installations have failed to live up to expectations. Rememeber how I said that the wire inside the coax will not recieve radio waves because of the shield blocking it, and that is how we "maintained" the 3-foot length at any distance ? ONLY TRUE IF THE SHIELD HAS A GROUND CONNECTION.
Next time you go out for beer (And can tear yourself away from the scanner), get some plastic electrical tape. when you get home, carefully wrap the tape right over the stripped spot on the coax and the wire wrapped around it. This will keep the wire (and shield) from "tarnishing up" and keeps the wife from saying "eeeewwwwww, that`s UGLY".
Here are your final instructions: Pop a cold one, sit down in your favorite easy chair, and enjoy the greatly increased range and clarity of your scanner. You earned it, and you did it yourself, for just a few dollars. Radio Shack can keep their expensive antennas, and you can still afford

beer.............. Whupped `em again, Josie.........

3652. Re: Ni-Cads, AAs & Race Cars

>loud volume?
>
Well, I can't comment on the non-stop part. My Sportcat will give me
8-10 hours on a charge, but that's with only some audio, not constant.

Tried to build a battery pack for mine to use my AAs with it. 2
problems: the plug is an oddball, the RS manager (yes, one with a clue
who was trying to help) said he probably had a pile from old cordless
phone batteries.

But I also discovered that the btty compartment is only big enough for
the cells, in other words I can't stick a btty holder in there because
it's too small. Might be able to do it just taping the batteries
together and taping on the wires, I haven't tried that.

>I was also thinking about a BC60XLT-1, since I only need a few channels and
>it runs on AAs. Does this scanner have a bad reputation? Somebody
>help....race day is closing in.
>

If I had to start over I would get something that I could stick AAs
in. I hate running out of charge in the middle of an event and having
no way to change the batteries. Might have to go by a second pack...

3653. Air Bands: Best Scanner?

Newsgroup: rec.radio.scanner
Date: 1998-05-04 00:00:00 UTC
From: ddhartwick@innernet.net
Message-ID: <07263B3E8A9838F3.C8A6A2C939540347.BDF6B4D3110B7EEF@library-proxy.airnews.net>
Source record: 161428

The BC760XLT I recently purchased (mentioned in above thread) was
intended to improve upon the seemingly poor performance of the RS
PRO-90 on the Air Band. I'm currently taking flying lessons, and want
to monitor Tower operations at my airport which is about 25 miles form
me.
Not surprisingly, I frequently receive strong signals from
aircraft, but the Tower's transmissions go mainly unheard.
Any advice on scanners that have superior Air performance?
I wonder if I'd be better off with a scanner specifically built for
that purpose, if they even exist.
Dave

The normal method is the Police Officer will ask if he can search your
vehicle, you say NO! BINGO! Flags go off, what are your trying to hide
probable cause then covers the Officer.

Well, not really, but since I've seen no citations on people's "knowledge"
of the laws here we go: (Taken from Wrobleski and Hess, Intoduction to Law
Enforcement & Criminal Justice, 5th Edition, West Publishing, 1997, p427)

"The precedent for a warentless search of an automobile resulted from
Carroll v.United States (1925), which established two basic principles
justifying warrantless searches of automobiles: (1) there is probable
cause, and (2) the automobile or other conveyance would be gone before a
search warrant could be obtained."

So, while probable cause is a wonderful thing to have, unless the Officer
can justify BOTH points, He or She is not covered. Most times if an
officer cannot, a search warrant will be obtained, but as was stated
before, a search warrant:(page 625) is: "a judical order directing a peace
officer to search for specific property, seize it and return it to the
court; it may be a written order or an order given over the telephone."
The hollywood image of a police officer comming to the door and showing a
search warrant and proceeding to look through the whole house (or car) is
not real.

If you refuse a search and the officer wants to search, He or she will
most likely find a way to through a search warrant. If I were asked to
allow a search of my car, I would most likely refuse, but then again, I
don't have anything to hide.......

I knew those Criminal Justice classes would pay off at some point :)

Sorry for long winded post, but it was time for some facts........

I'm sure this happens in Canada. Not quite yet in the US.

Generally failure to give permission to search in this country just
makes them call the K9 unit to sniff for drugs. And, of course, if
the dog alerts, then they search your trunk. Some cops will have
a bag of marijuana in their pocket and touch the exterior of your
trunk to get the dog to alert.

There's a really good book that covers this sort of thing titled
You and the Police by Boston T. Party, available through Amazon.

I highly recommend it.

Shawn

Yes, cell freqs are blocked by law. I never said anything about *his* being blocked by law. All I said is they are now blocked - in *present tense*, not past. I did not know they didn't block them back then. Radio Shack did - I still have a really old scanner from '89, and cell frequencies are blocked. In the manual, it also says they are blocked "by law".

Anyway, they are blocked (who cares by who - but, the Cat provided that information). Key term here is blocked.

Let's leave it at that.

Perhaps someone can correct me, but I thought no warrant was needed to
search within the drivers reach in the vehicle...this usually involves
the officer standing outside the vehicle, and searching the areas he
can reach......But then I again,,,,I am asking.
